DOC_ID: VIL_001_BRIEF // REF: V0.3.0

**CLASSIFICATION: VILLAGER EYES ONLY**

# VILLAGER TEAM: FIRST BRIEF

## **Operational Protocol** for the Transition to Production (v0.3.0)

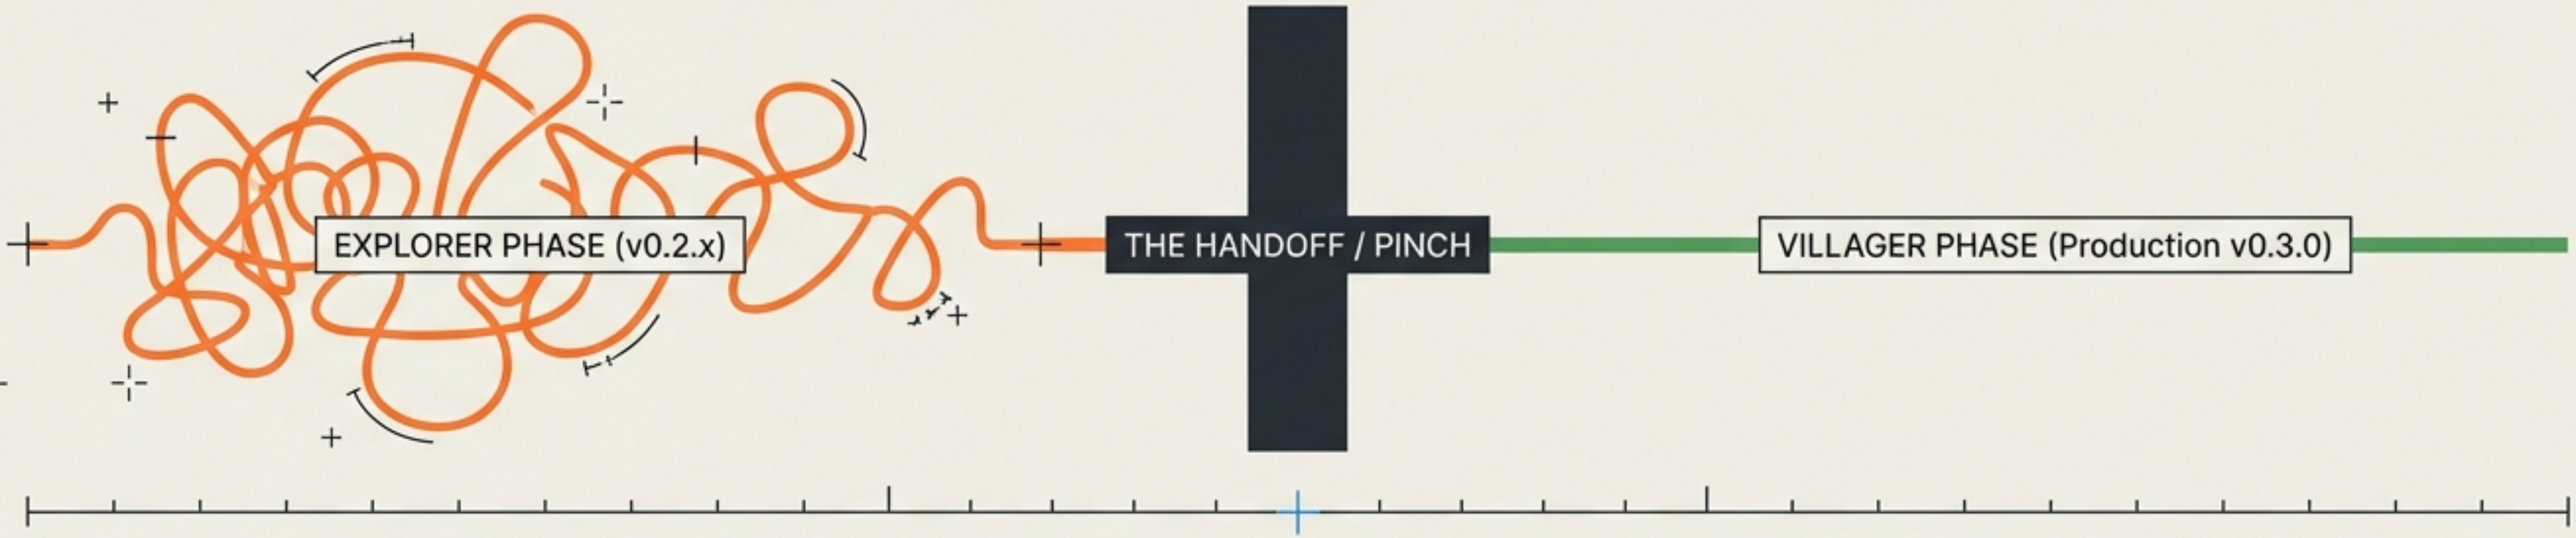
| | |
|---|---|
| DATE: 14 Feb 2026 | FROM: Human (Project Lead) |
| TO: Villager Team (via Conductor) | STATUS: ACTIVE DIRECTIVE |

MISSION PARAMETER: The Explorer phase is complete. The Settlement mission is now active. Proceed with productisation.

# THE HANDOFF: PINCH POINT PROTOCOL

## Transitioning from Experimental R&D to Live Production.

| |
|---|
| PROJECT: PIXCH POINT PROTOCOL |
| DATE: 2824.18.27 |
| SECURITY: CLASSIFIED // LEVEL 3 |



### THE MANDATE

Explorer team has produced mature components. Their focus shifts to future exploration. We do not share daily briefs anymore.

STATUS: ACTIVE / EXPLORATORY

### THE PINCH

We select a stable version (e.g., 0.2.7). This acts as the frozen foundation for the settlement.

ACTION: FREEZE POINT / STABLE BUILD

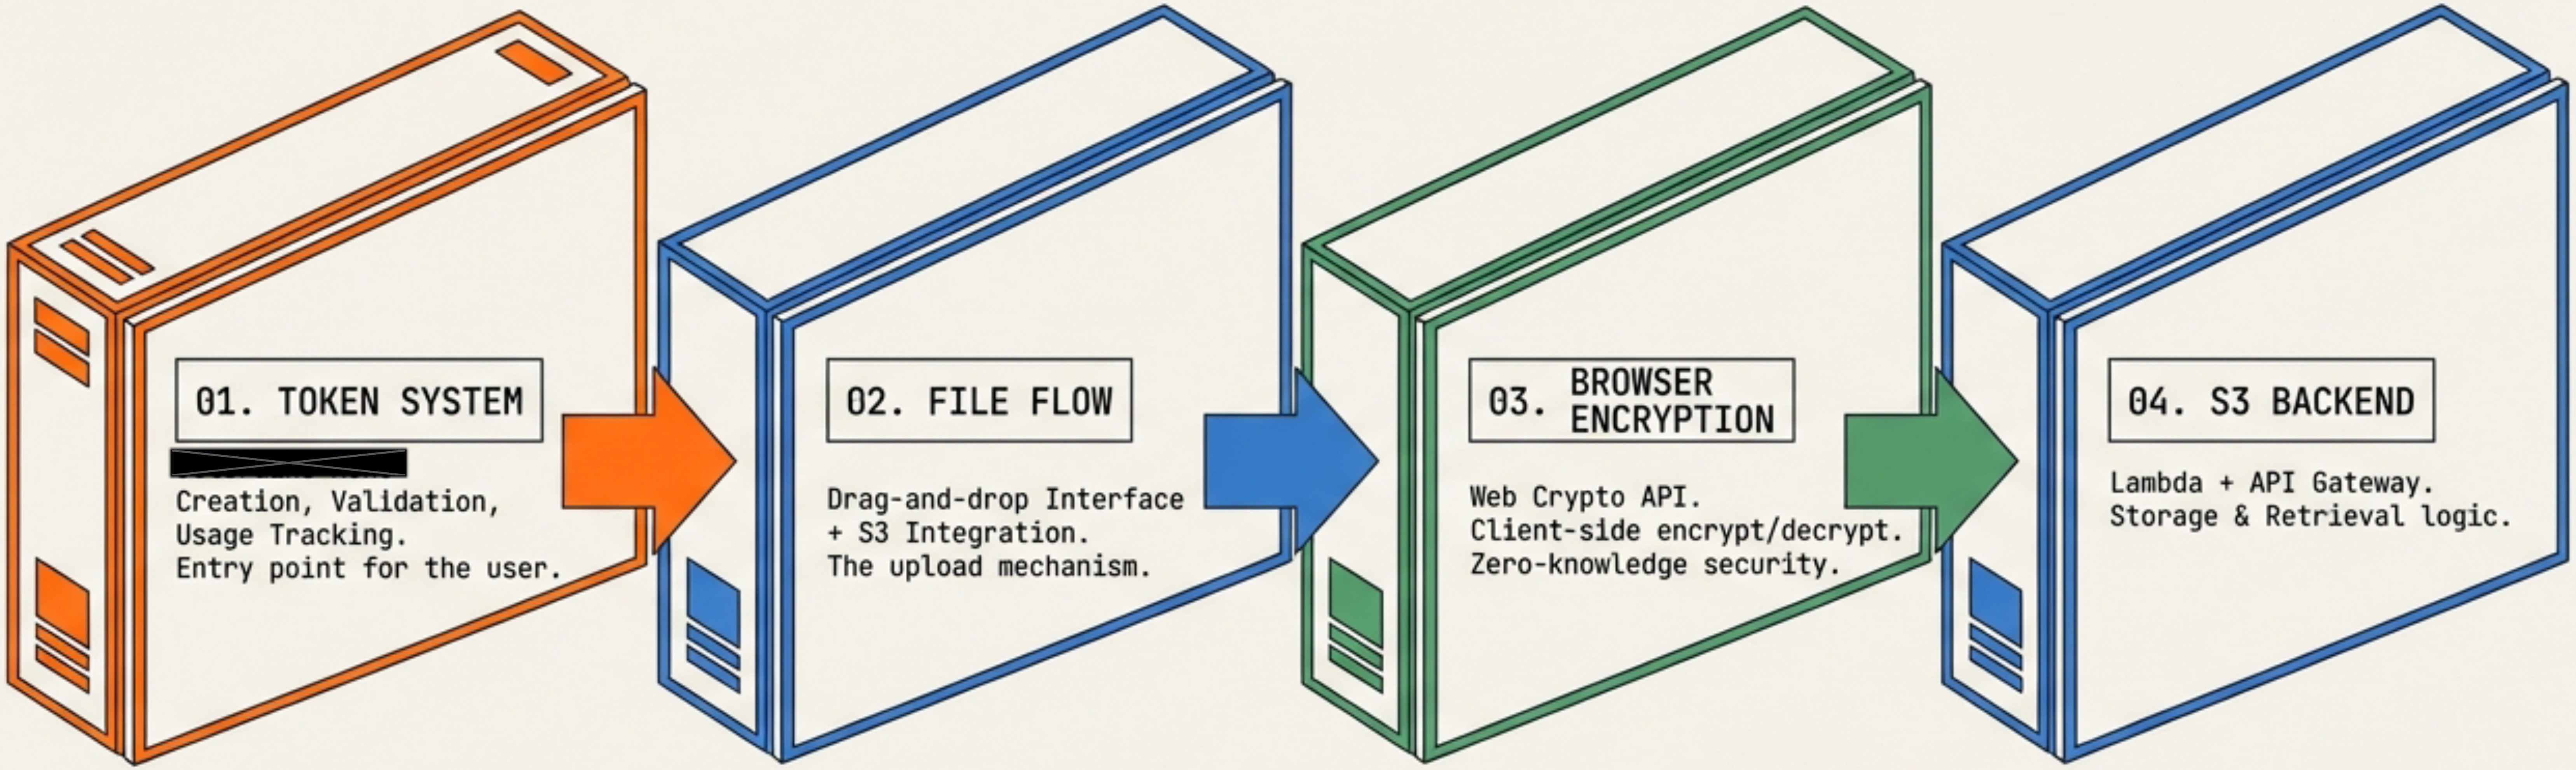
### THE MISSION

Productise the components. Environments are now isolated. We focus on the 'Now'.

OBJECTIVE: PRODUCTION DEPLOYMENT / STABILITY

# THE PAYLOAD: END-TO-END MVP

Four modular components forming the complete **User Journey.**



[redacted]

FUNCTIONAL LOOP: Login -> Upload -> Encrypt -> Share -> Decrypt

# DOCTRINE SHIFT

Optimisation of **Change** vs. Optimisation of **Reliability**.

## EXPLORER DOCTRINE

GOAL: Ease of change & blast radius containment.

METHOD: High fragmentation. 20-50 small files per component.

ENVIRONMENT: Development / Experimental.

MINDSET: "Change one thing without breaking another."

## VILLAGER DOCTRINE

GOAL: Performance & Reliability.

METHOD: Consolidation. Single bundles. Minified assets.

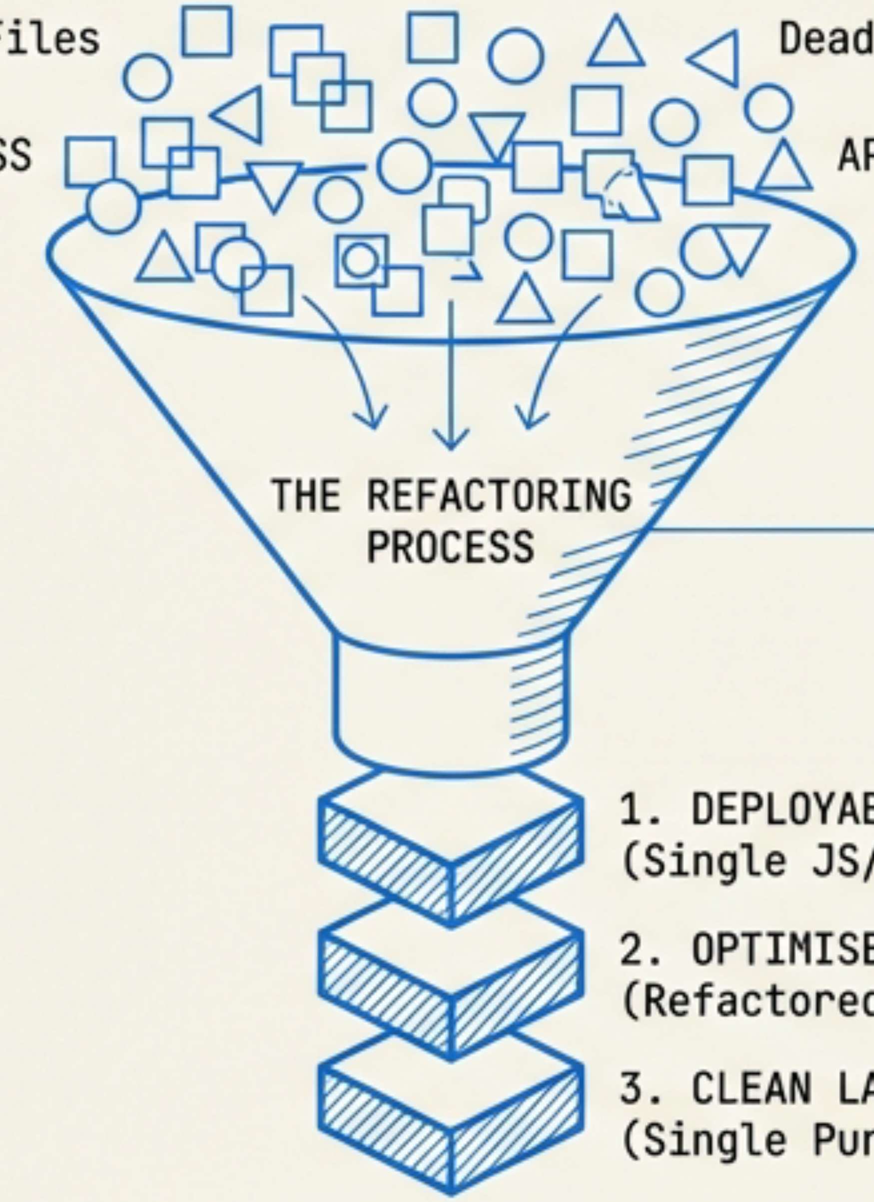
ENVIRONMENT: Production / Live Users.

MINDSET: "Code that runs all the time."

[redacted]

# CONSOLIDATION STRATEGY: SQUASH & REFACTOR

Turning fragmented experiments into solid production artifacts.



OBJECTIVE: Runtime efficiency and download performance. Feature-identical, but structurally optimised.

# THE IFD RELEASE PROCESS & VERSIONING

Translation logic for the Release Numbering.

**EXPLORER v0.2.7**

HANDOVER & CONSOLIDATION

**VILLAGER v0.3.0**

### 01. THE SNAPSHOT

We choose an agreed stable version (e.g., 0.2.7), not necessarily the newest draft (0.2.15).

### 02. THE TRANSLATION

Explorer (0.2.x) = Incremental minor versions.
Villager (0.3.0) = Consolidated major release.

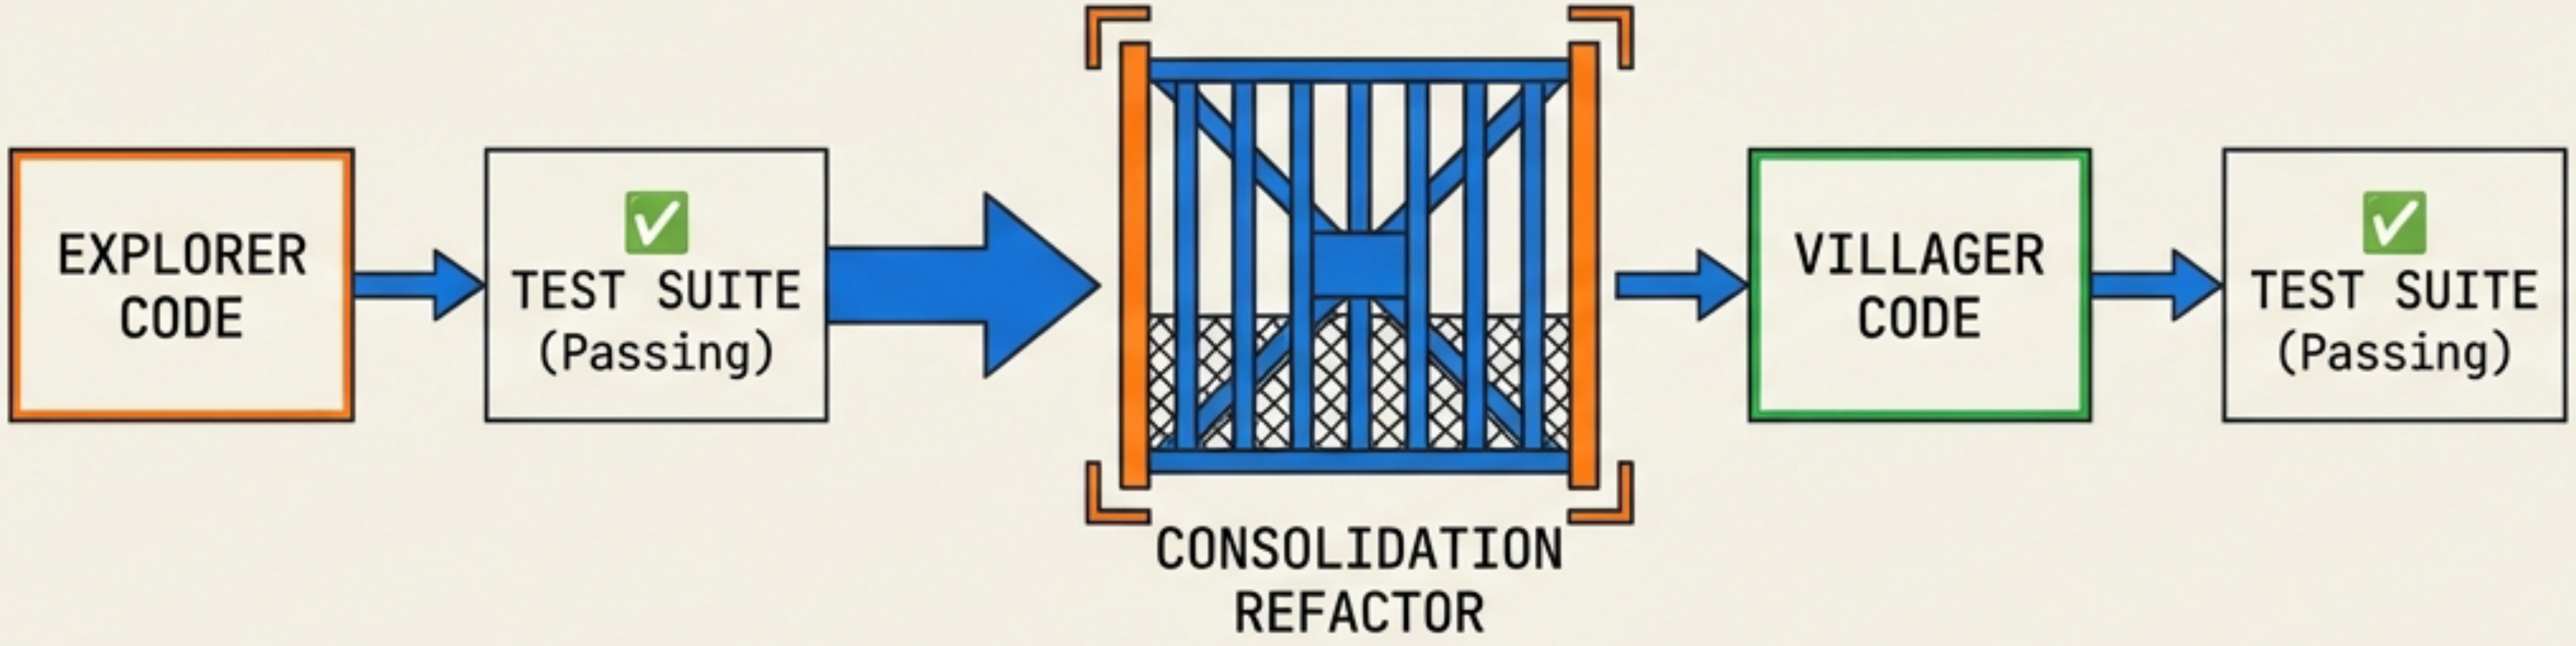
### 03. THE NUMBERING

First digit remains 0 (Pre-1.0 phase).
Second digit increments for major production launches.

Operational Constructivist

# THE QUALITY GATE: FEATURE EQUIVALENCE

Unit tests are the only proof that consolidation hasn't broken functionality.



## SCOPE OF TESTING

- ☑ Existing Unit Tests
- ☑ Use Case Tests (End-to-End)
- ☑ Playwright Automation (Synthetic Users)

## THE IRON RULE

Explorer unit tests must pass against Villager consolidated code with minimal or no changes.

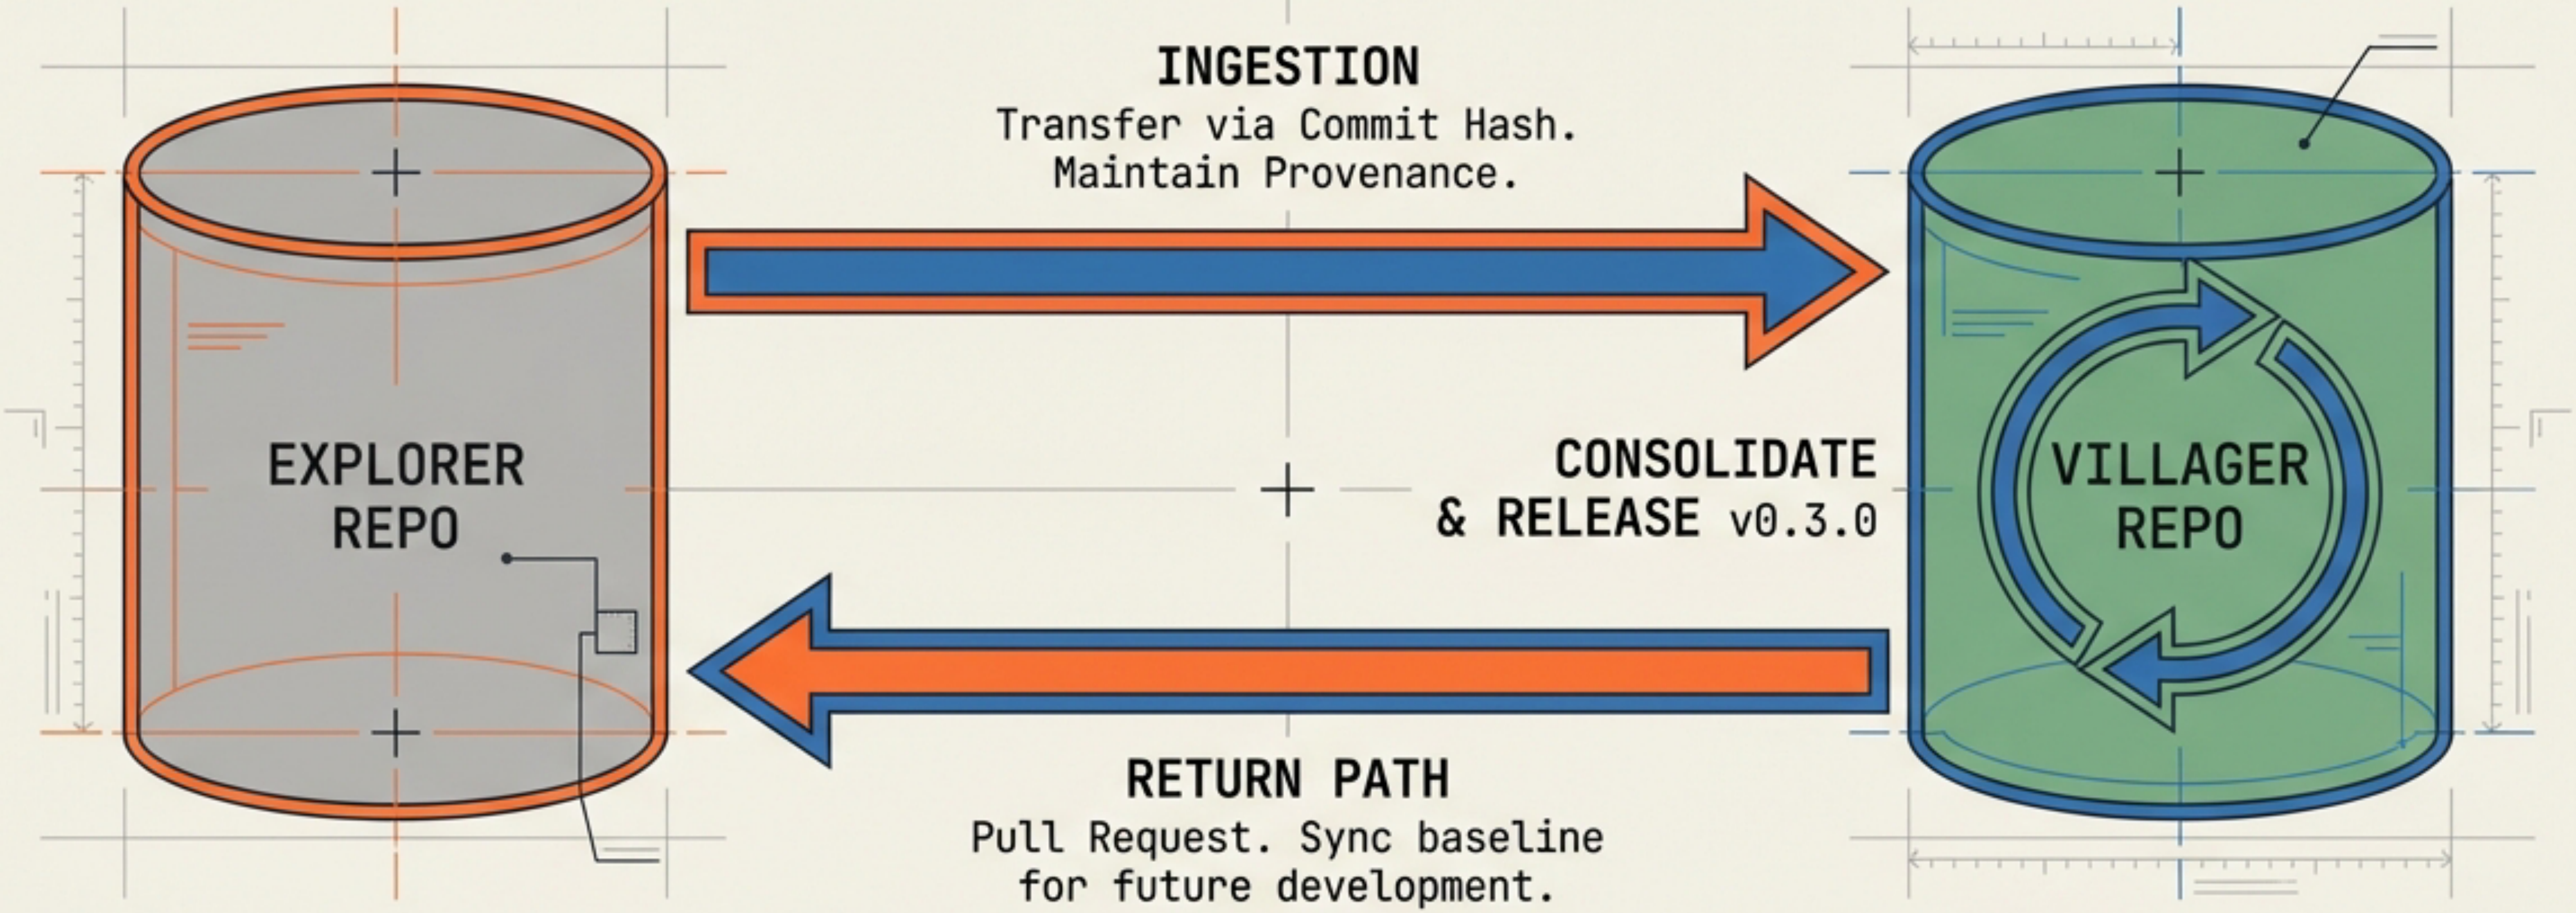
THE MANTRA: If a test fails, fix the code, not the test.

[redacted] →

# GIT STRATEGY: PROVENANCE & SEPARATION

Chain of custody must be preserved across repositories.

PROJECT: PIXCH POINT PROTOCOL
DATE: 2624.11.15
SECURITY: CLASSIFIED // LEVEL 3

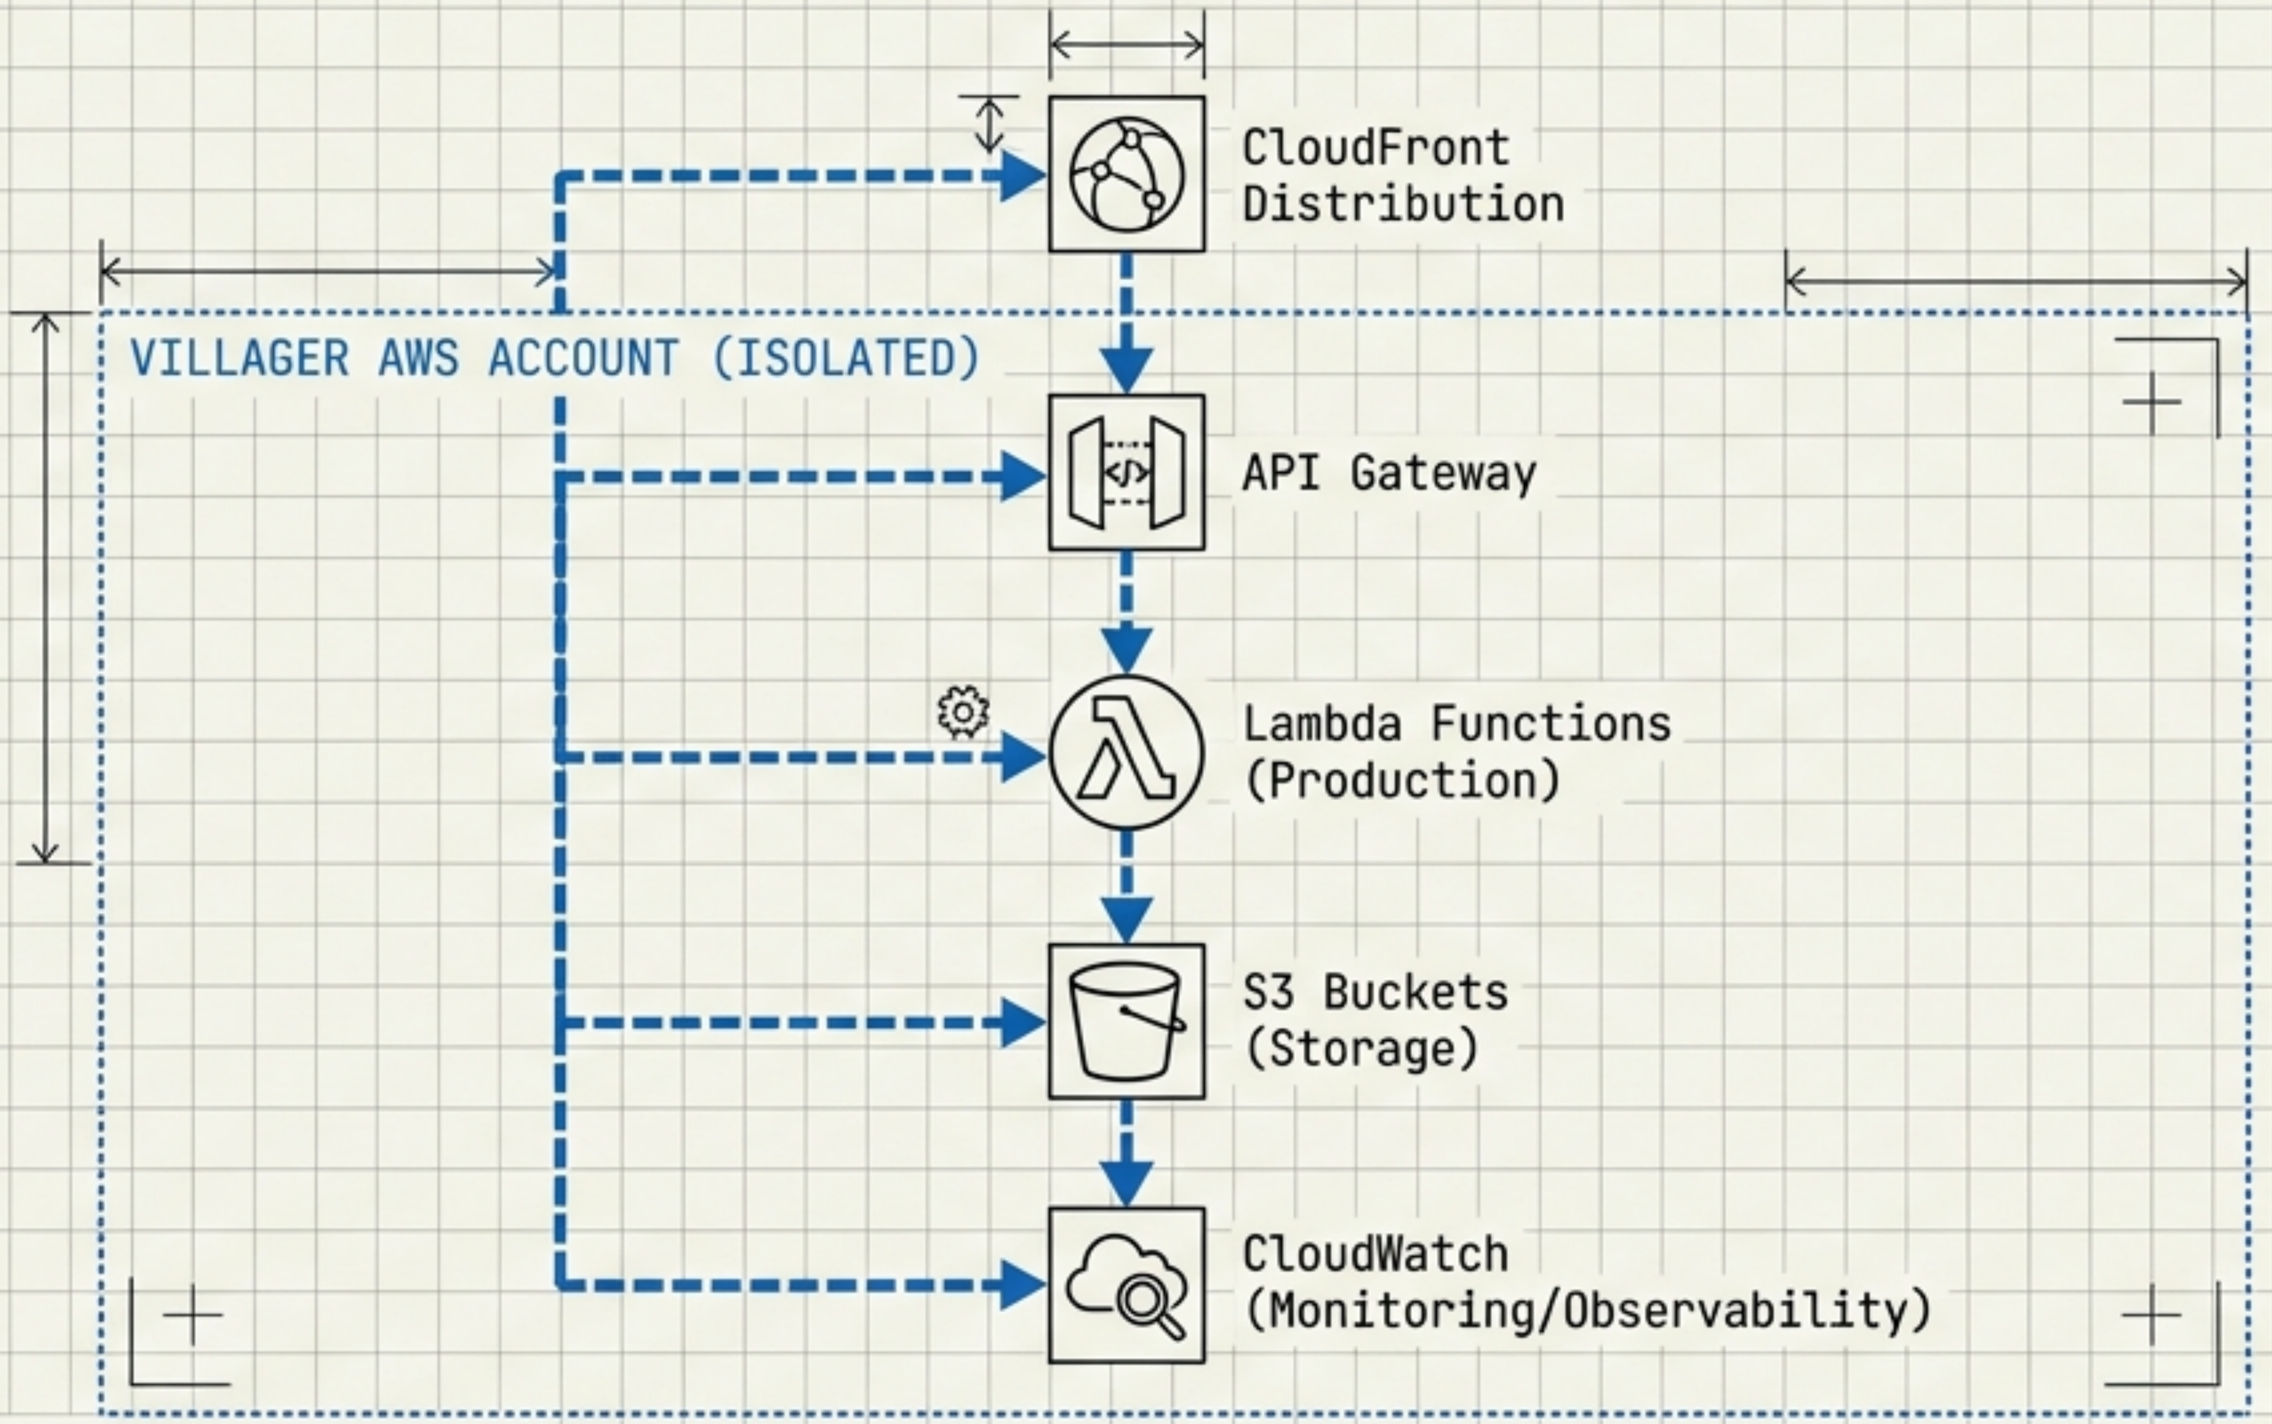


## SECURITY REQUIREMENT

Every line of Villager code must be traceable to an Explorer commit hash.
Separate repos prevent cross-contamination.

# PRODUCTION INFRASTRUCTURE: TOTAL ISOLATION

Your Environment. Your Rules. Defined purely in Code.



## CONFIGURATION PRINCIPLES

1. IaC (Infrastructure as Code): No manual console configs.
2. REPRODUCIBLE: Environment must be rebuildable from the repo.
3. SEPARATE DOMAINS: Distinct URLs from dev/test.
4. OBSERVABILITY: Monitoring active from Day One.

# THE TASK MATRIX: EXECUTION PRIORITIES

Tactical Roadmap sorted by Urgency.

**PROJECT:** PIXCH POINT PROTOCOL
**DATE:** 2624.11.15
**SECURITY:** CLASSIFIED // LEVEL 3

## PRIORITY 1: BLOCKERS

- [ ] Set up separate Villager Repo
- [ ] Provision AWS Infrastructure
- [ ] Establish Git Provenance Workflow
- [ ] Build Production CI/CD Pipeline
- [ ] Consolidate Code (v0.2.x -> v0.3.0)

## PRIORITY 2: SAFETY

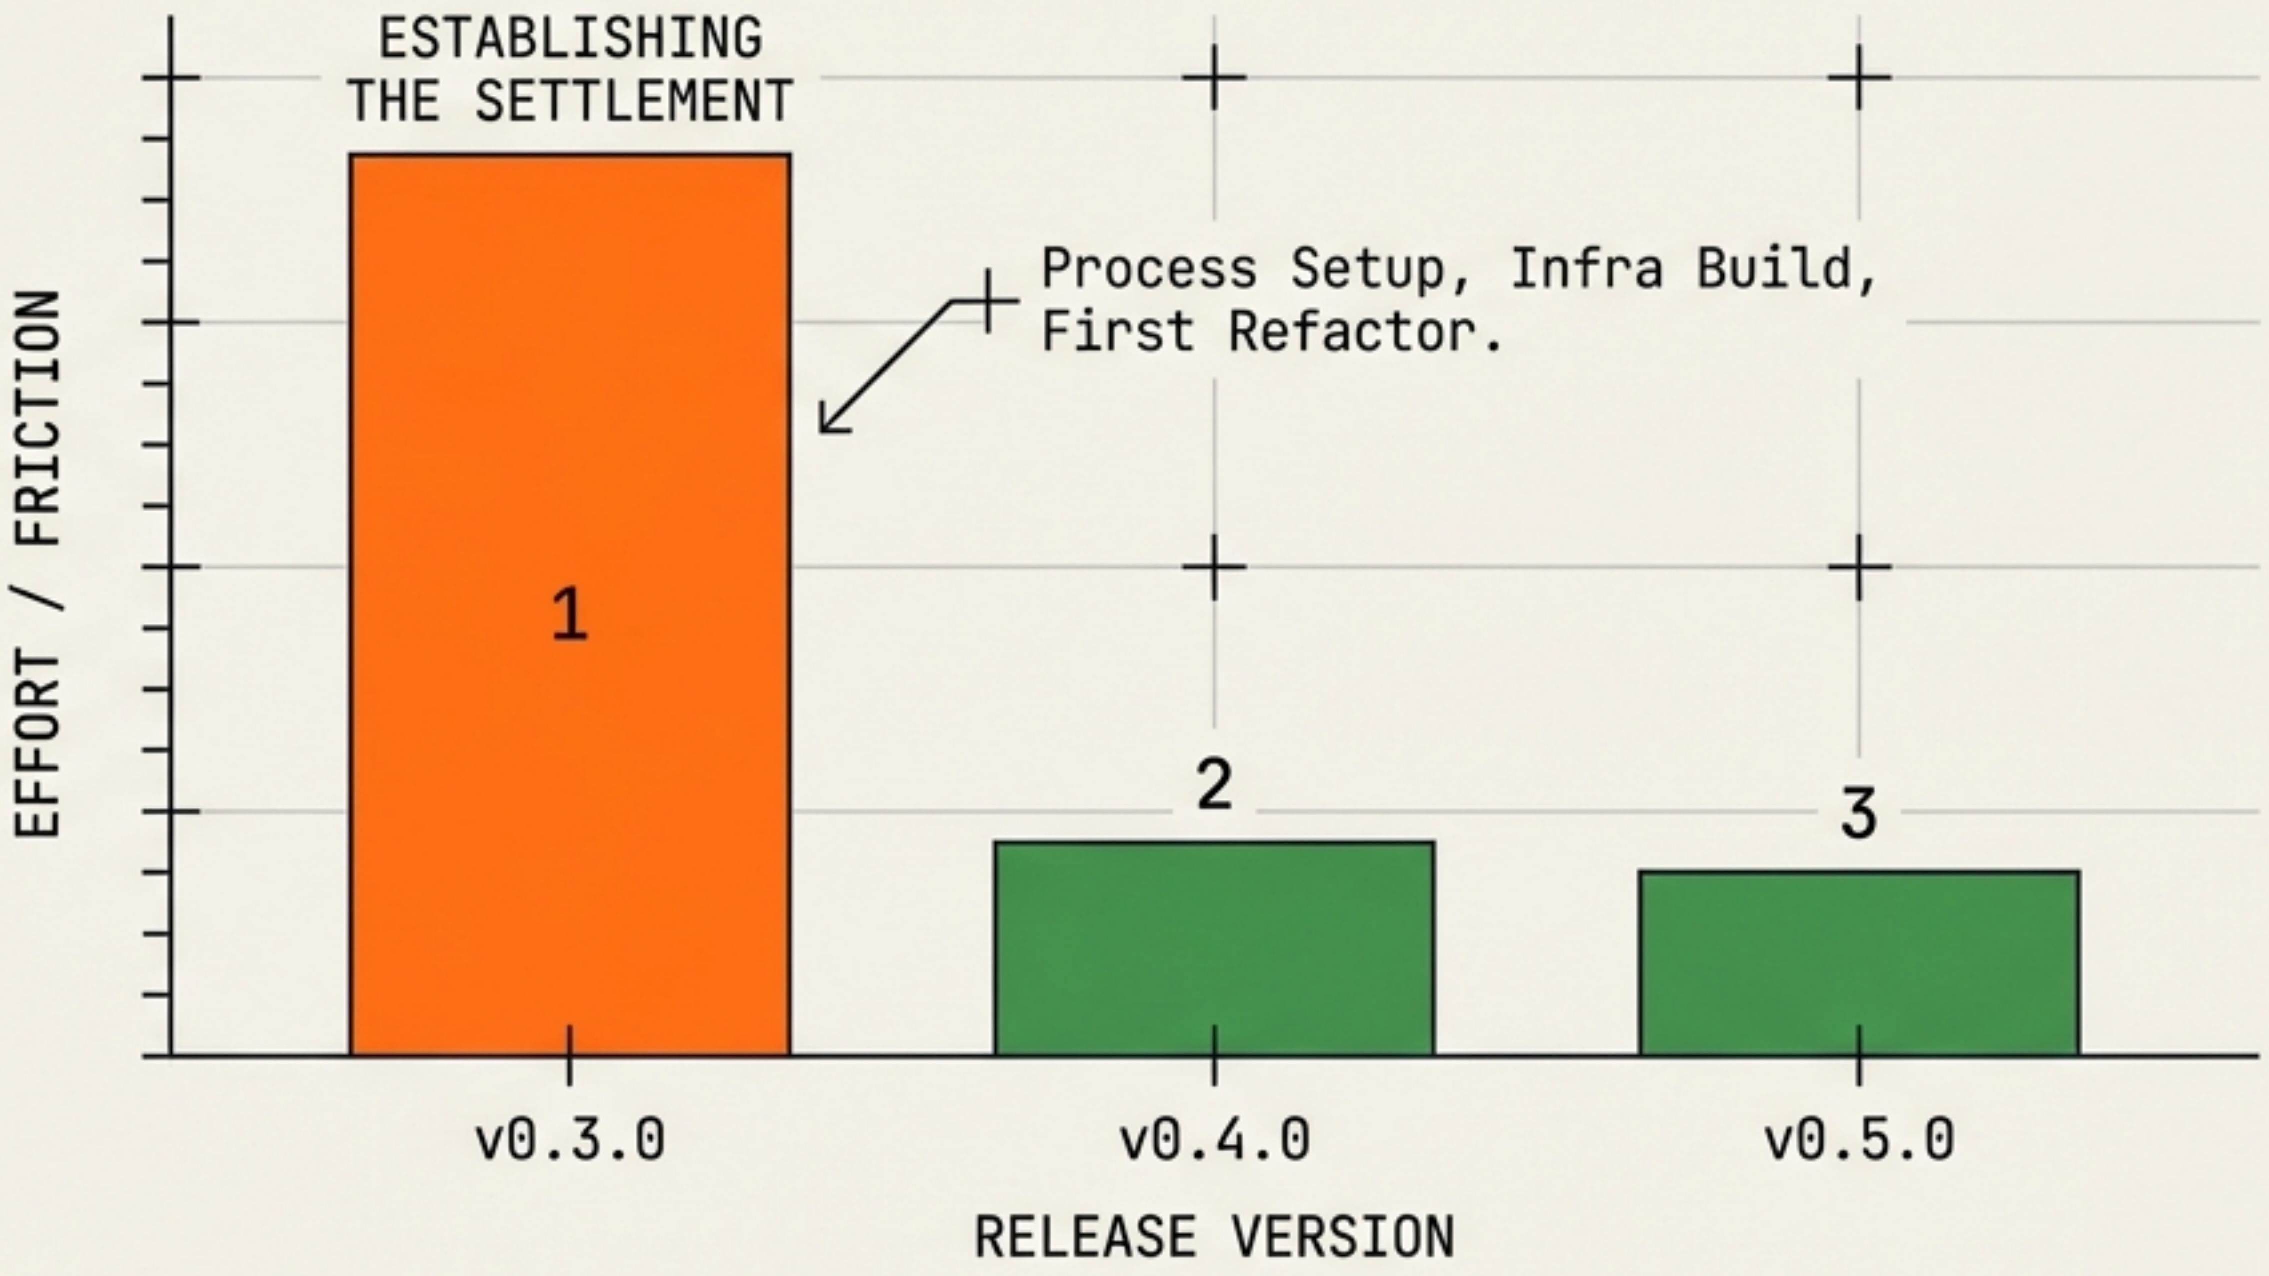
- [ ] Monitoring & Alerting Setup
- [ ] Runbooks (Rollback, Incident)
- [ ] Security & DPO Reviews

## PRIORITY 3: GOVERNANCE

- [ ] Measure Handover Overhead
- [ ] GRC Compliance Check

# THE ‘FIRST RUN’ REALITY

Building the pipeline vs. Using the pipeline.



## EXPECTATION MANAGEMENT:

The first run is hard because we are building the machine, not just operating it.

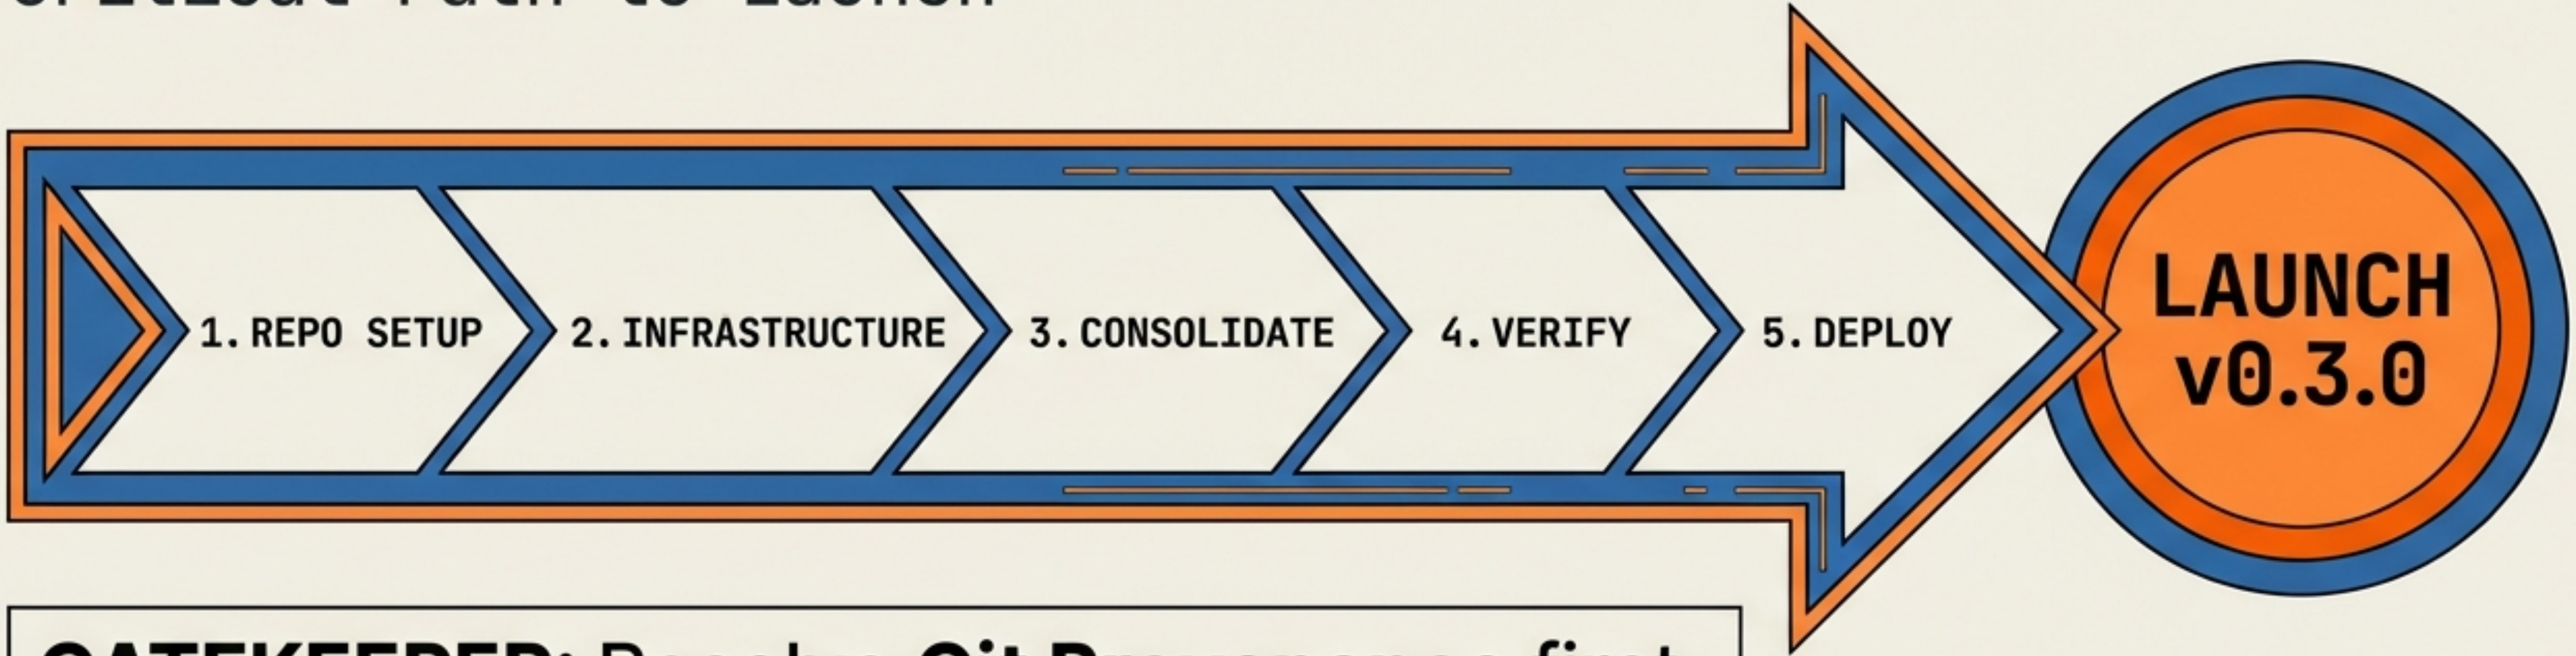
By v0.4.0, this must be routine.

We will measure the overhead to ensure it decreases.

# COMMANDER'S INTENT

PROJECT: PIXCH POINT PROTOCOL
DATE: 2624.11.15
SECURITY: CLASSIFIED // LEVEL 3

## Critical Path to Launch



**GATEKEEPER:** Resolve **Git Provenance** first.

**INDEPENDENCE:** The Explorer team is moving on. We do not wait.

**TARGET:** Ship the First Settlement Release.

END BRIEFING 001.
