ChatGPT

Seeking Co-Authors & Content Editors for AI/ Cybersecurity Publications

Introduction & Opportunity

Hello! My name is **Dinis Cruz**, and I've recently embarked on a prolific content creation journey using an AI-powered **NotebookLM** workflow. In just the past few weeks, I've generated **40–50 high-quality research documents, infographics, and slide decks**. These cover cutting-edge topics in AI, software development, cybersecurity, and more – totaling about **1.6 GB of content** published openly on GitHub. This AI-driven workflow has been a game changer, allowing me to produce professional-grade material at an unprecedented pace [1] . Now, I'm looking for a couple of **co-authors / content editors** to help **polish, publish, and monetize** this treasure trove of content. This is a unique collaboration opportunity to turn these ideas into widely distributed publications and revenue-generating assets.

About the Content (Topics & Formats)

The content we'll work with is **rich and diverse**, reflecting my interests in technology, security, and innovation. All materials are available under an open Creative Commons license (no exclusivity) [2] . Here's a glimpse of the **topics and formats** you can expect:

- **Generative AI & Development:** e.g. *LLM coding style guides, AI vs. the Internet (trust in AI-generated content), the Generative AI divide*.
- **Software Engineering Best Practices:** e.g. *Iterative Flow Development (IFD) methodology, Type-Safe Python frameworks and testing guides for LLMs, TDD and automation*.
- **Cybersecurity & AppSec:** e.g. *Threat modeling with Wardley Maps, content filtering technical briefings, OWASP projects (Semantic OWASP research), DevSecOps workflows*.
- **Knowledge Graphs & Data**: e.g. *Self-evolving knowledge graphs with Neo4j, connecting and customizing open knowledge bases*.
- **Open-Source & Startup Innovation:** e.g. *Multi-startup strategy using open-source, case studies on lean serverless infrastructure, collaboration across ventures*.
- **Future of Tech & Society:** e.g. *"Future of News" analysis, exploring how AI changes content publishing and trust online*.

Formats range from **detailed whitepapers and guides** to **visual slide decks and infographics**. For example, I have dozens of slide decks (I've published 66 on SlideShare over the years [3]) and many new AI-generated infographics ready for refinement. This repository of content is growing rapidly – and it's **ready to be transformed into blog posts, articles, LinkedIn posts, Medium stories, videos, and more**.

What I'm Looking For (Your Role)

I'm seeking **collaborators who are passionate about tech content** and can help turn these raw materials into polished publications. Ideally, you are:

- **A Skilled Writer/Editor:** You can rewrite and refine technical content into an engaging **human voice** while preserving accuracy. You'll act as a **content editor and co-author**, making the material accessible and compelling to broader audiences.
- **Media-Savvy:** You know how to adapt content to different platforms – be it a Medium article, a LinkedIn post, a Dev.to piece, or even scripting a YouTube video. You might create blog posts from slide decks, or derive articles from research papers.
- **Marketing & Distribution Oriented:** You can identify the **best outlets for publication** – whether guest posts on tech sites, submissions to paying publications, or our own blogs and LinkedIn. You're excited to **get the content in front of readers** and maximize its impact (and revenue potential).
- **Entrepreneurial Mindset:** This is a commercial venture. You think creatively about **monetization** – e.g. leveraging the Medium Partner Program, sponsored content opportunities, or YouTube monetization. You're driven to help build an audience and revenue stream from these materials.
- **Interested in the Topics:** You find the above-mentioned content areas exciting. Collaborating will be much more fun and effective if you're naturally curious about AI, cybersecurity, DevSecOps, open-source, etc. (You don't need to be an expert in all, but a willingness to learn and engage with the subject matter is key.)

In this partnership, I will **provide the ideas and raw content** – the research, initial drafts, slide decks, and infographics (all the heavy lifting of content creation is done). **Your role is to add the human touch**: restructure the narrative if needed, improve clarity, ensure it resonates with readers, and handle the publishing logistics.

How We'll Work Together

This collaboration will be dynamic and creative. Here's how I envision our workflow and partnership model:

1. **Content Handover:** I will share access to the GitHub repo and my docs site (see docs.diniscruz.ai) where all source materials are hosted ② . We'll communicate to prioritize which pieces to polish and publish first (based on timeliness or audience interest).
2. **Editing & Co-Authoring:** You'll take a draft document or slide deck and rewrite it in polished prose. Feel free to re-structure or split into a series if that works better. We can both be listed as co-authors, or you can be the primary author with me as contributor – I'm flexible on author credit as long as the content gets out there. All content will remain CC-licensed to allow free sharing and re-use.
3. **Design & Multimedia:** For infographics or slides, you can tweak the visuals or layout if needed. If turning a piece into a video, you might help create a script or storyboard (I can assist with narration or on-screen presence if needed, or we use AI voiceovers, etc.).
4. **Publishing & Distribution:** You'll handle posting the content on various platforms. This could be on my established channels (I have ~22k LinkedIn followers ④ and active engagement) – or on new channels we create. We might publish on Medium under our names, share to relevant communities (e.g. Reddit, Hacker News, Dev forums), and promote on social media. The goal is to **maximize reach**. I will of course also push the content through my network to amplify it.

5. **Iterate & Expand:** Based on feedback and performance, we can iterate – e.g. follow-up articles, responses to comments, or even longer-form content like e-books if there's demand. There is a *continuous pipeline* of fresh content from my ongoing research, especially as I continue to leverage NotebookLM for new ideas. This could evolve into a long-term content venture if it proves successful.

Throughout this process, expect a collaborative spirit. I'm very open to your creative input on how to present ideas or which angles to emphasize. My main objective is that the core ideas (the "meat" I've generated) reach a wide audience in a digestible form.

Partnership Terms & Benefits

To ensure clarity, I propose the following **rules of engagement and terms** for our collaboration (essentially a lightweight "contract" between us):

- **Creative Commons License:** All materials we publish together will be released under a Creative Commons license (attribution, non-commercial reuse allowed). This keeps things flexible – no exclusive rights for any outlet, and we both can share or reuse the content freely in the future. It's important to me that knowledge remains open.
- **Revenue Sharing (50/50):** We will **split any revenue 50/50** that results from the content we publish. This includes payments from platform programs (e.g. Medium Partner Program reads), sponsored posts, ad revenue from YouTube videos, royalties, or any other monetization. If an article generates income, we share it equally. *(To simplify accounting, we'll apply this 50/50 split to any such earnings for up to one year after that content is published.)*
- **Royalties for 1 Year:** That 50/50 split covers royalties or recurring revenue for **one year** following publication of a piece. For example, if we publish an e-book or a video that keeps earning over months, we'll continue splitting those earnings for at least a year. (In practice, I don't anticipate significant long-tail royalties beyond a year, but this clause ensures fairness in case something goes viral or has sustained income.)
- **No Long-Term Obligation:** Either party can **terminate the collaboration with 15 days' notice**. There's no long-term lock-in – if at any point you feel it's not working out (or I do), we can part ways amicably. Any content already published will still honor the 50/50 revenue split for the remainder of its 1-year post-publish period, even if we've stopped working together.
- **Attribution & Ownership:** We will both be credited appropriately on all publications. Since everything is open license, both of us can also reference the work in our portfolios. There's no need for NDAs or exclusivity; transparency and openness are part of the model.
- **Expenses:** If there are any minor expenses (e.g. paying for a domain, a specific publishing fee, or design tool subscriptions), we should discuss and agree how to handle those – likely treat them as shared investments. But I expect costs to be minimal as we'll leverage free platforms and open-source tools as much as possible.

What's in it for you? Aside from the revenue sharing, this partnership is a chance to **build your brand and portfolio**. You'll be co-authoring pieces that get in front of potentially large audiences. You'll also have **ready-made, high-quality material** to work with – meaning you can focus on creativity and polish rather than starting from a blank page. If you're an emerging tech writer or editor, this could rapidly increase your visibility (leveraging my existing network and follower base [4]) while earning income. Plus, it's a genuine opportunity to learn about and influence discussions in hot tech domains. Think of it like joining an **indie research publication team** at ground level.

About Me (Why Collaborate with Dinis)

I've been deeply involved in the tech industry for years, with a background in application security, open-source projects, and more. Currently, I'm the founder of multiple synergistic startups in cybersecurity/ AI, and have served in roles like Chief Scientist, CTO, and CISO in the past. I'm an active contributor to communities like OWASP, and I believe strongly in open knowledge sharing. Over time I've authored numerous presentations and articles – for instance, I have dozens of SlideShare decks and thousands of blog posts and social media entries. On LinkedIn alone I've made over **3000 posts** and written **75 articles**, gathering more than **22k followers** [4] . This means any content we publish has a built-in initial audience.

What drives me now is the excitement of combining human creativity with AI tools (like NotebookLM) to push the boundaries of content creation. As one recent analysis noted, AI content generation is at a *"tipping point"* where it achieves **professional-grade quality** [1] – my experience echoes this. However, I also recognize the need for the **human element** – that's where you come in! Together, we can ensure the ideas are not just correct, but also **compelling and relatable**.

You can find more about my work and interests on my **LinkedIn profile** and on my **research docs site**:

- LinkedIn: [Dinis Cruz on LinkedIn](#)
- Research Docs & Presentations: [docs.diniscruz.ai](#) (an MKDocs site hosting many of my recent documents and slide decks) [2]

Feel free to browse those to get a sense of the content style and range.

Next Steps – Let's Connect

If this opportunity excites you, I'd love to talk! ✉ **Please reach out to me** – you can message me on LinkedIn or email me (if you have my contact) to discuss further. We can start with a casual chat about your background and ideas, and I can answer any questions about the content or the collaboration logistics.

Time is of the essence because the tech world moves fast – I have some pieces that are timely and would benefit from publishing soon. So, I'm keen to get started and ideally publish our first co-authored article within weeks of teaming up.

Thank you for reading this proposal. I believe that with the right partners, we can turn this cache of AI-assisted research into a powerful content stream – one that not only generates revenue, but also informs and inspires the community. I'm really looking forward to collaborating with creative minds who are as passionate about technology and knowledge-sharing as I am.

Let's create something amazing together and get it out into the world!
