

We Already Shipped the Data Room

An emergent product milestone,
immediate market repositioning,
and our zero-code execution plan.

v0.10.30
3 March 2026
Project Lead

An emergent product built from independent primitives

Zero Code Changes Required.
It works today, right now, as deployed.

Folder Upload

(Built to answer: 'why can't I drop folders?')

Zip View in Browser

(Built as reverse of folder-to-zip)

File Preview

(PDF, images, markdown)

Large File Handling

(300MB+ confirmed working)

The Instant Data Room.

A folder of files, encrypted, accessible via a link, with in-browser preview of every file.

The Wardley Map Evolution in action

We built the primitives for their own reasons. Combined, they created something none of them were designed to be. The data room is our second 'killer app'.

The friction of the old investor investor review workflow

- Receive a pitch deck via email (unencrypted, confidential data in the clear).
- Conduct deep research via Claude/ChatGPT.
- Apply the 7-step GenAI cybersecurity evaluation framework.
- Generate the assessment report.
- Create an infographic via NotebookLM.
- Create a slide deck.

The Final Bottleneck:

Email all materials back to investors as multiple attachments.
No organisation. Zero security.

Drop a folder. Get a link. Done.

1. Create a local folder with numbered files and a source document subfolder.

2. Drop the entire folder into SG/Send.

3. Receive a single secure link.

"Holy shit, this is a data room."

Every file clickable. PDFs, images, and markdown previewed in-browser. Fully encrypted. Shared with investors instantly.

The Document Creation Service is live in production

Input	Received a URL to review.
Research	Deep research via Claude/ChatGPT.
Framework	7-step evaluation framework applied.
Transform	Generated report, infographic, slide deck, assessment.
Package	Organised in a folder with numbered files & source subfolder.
Deliver	SG/Send folder upload -> encrypted data room -> emailed link.

The service is live. It's manual, but it works end-to-end.
(Automation path: upload portal, auto-transcription, auto-first-draft is next).

Real work, real materials, real investors

Not a test.

Not a demo.

**A superior
workflow.**

This is the first time SG/Send was used as a data room for a real business purpose. We shared structured, confidential analysis securely, using the product exactly as it exists today.

Deciding on the product name

Name	Pro	Con
Data Room	Established term, implies confidentiality	Can sound enterprise-heavy
Vault	Implies security	Already used for persistent storage
Folder Share	Simple, descriptive	Too generic
Room	Short, clean	Too vague
Package	Descriptive	Misses the viewing experience

**Recommendation: We will use ‘Data Room’ in marketing.
It is the term the market instantly understands.**

The Instant Data Room is the gateway to the Vault

Summary: The Instant Data Room drives immediate adoption and natural progression into Vault retention.

Action 1: Update website messaging

Zero Code Required | P0 Priority

Target: Ambassador + Designer

The Shift: From "encrypted file transfer" -> "encrypted data rooms in one click."

Approved copy

Drop a folder. Get an encrypted data room. Share the link.

All your files, organised, previewable, encrypted. One link.

The easiest way to share confidential documents with investors, clients, or partners.

Instant data rooms — drop a folder, share a link, done.

Action 2: Launch a live public demo

Target: Ambassador

Directives:

- Curate a real set of files: PDFs, images, markdown, and a video.
- Visitors must be able to click through and experience the browser preview natively.

Strict Rule: No mock-ups. No screenshots. Build a live, encrypted data room. It is the most convincing demo possible because it is the product.

Action 3: Notify Customers & EAP Users

Zero Code Required | P0 Priority

Target: Sherpa

The Strategy: A zero-effort message. We are pointing out that the features they already have combine into something powerful.

Action 4: Publish the Investor Review case study

P1 Priority

Target: Journalist

Note: This is authentic marketing content that writes itself because it is a true story.

Problem: Sharing confidential startup analysis materials via email meant unencrypted, unorganised, multiple attachments.

Solution: Drop a numbered folder into SG/Send -> generates an encrypted data room with in-browser preview -> yields one clean link to share.

Result: Organised, encrypted, previewable. A vastly superior experience for the investor with zero effort required from the sender.

Immediate Execution Matrix

Action	Owner	Priority
1. Update website messaging	Ambassador, Designer	P0 — This week
2. Create sgraph.ai/demos/ live room	Ambassador	P0 — This week
3. Send update to Customers + EAP	Sherpa	P0 — This week
4. Write investor review case study	Journalist	P1 — This week
5. Finalise 'Data Room' naming rollout	Ambassador, Human	P1 — This week

The product is already shipped. The work is now purely messaging, positioning, and communication.
ZERO CODE REQUIRED.
