

Reactivating Cyber Boardroom via Agentic Infrastructure

Brief — strategic integration, new product direction
Date: 27 Feb 2026

TRANSLATING TECHNICAL CYBER RISK INTO BUSINESS CONTEXT

Board members are capable but lack cybersecurity expertise.
They need translation, not education.

The infrastructure gap has been closed

What was missing

- Secure data rooms for sensitive board materials
- Agentic workflows to research, brief, and package
- File sharing with encryption and access control
- Scalable agent deployment per engagement
- Multi-stakeholder communication (CISO and board)

Now live in SG/Send

- ✓ Data rooms with zero-knowledge encryption
- ✓ 18-role agent team, CLAUDE.md, Issues-FS
- ✓ SG/Send core file transfer capabilities
- ✓ Claude Code Web + role MDs + scoped MCP
- ✓ Sherpa inbox, multi-agent email, data room viewers

“Cyber Boardroom is a packaging play, not a new build”

The Cyber Boardroom is not a separate product to rebuild.
It is a packaging of SG/Send's agentic infrastructure for
the cybersecurity board advisory market.

SG/Send
Core

Board Advisory
Interface

Unit economics have stunted the board advisory market

- A standard board advisory engagement takes 10 to 20 days.

- Clients refuse to pay for excessive consulting hours.

- Consultants lack the bandwidth to manage multiple clients.

- Result: The market stays artificially small because human-only economics do not scale.

Deploying a mini agent team for every engagement

Scaling human judgment through agentic leverage

1 CISO serves 5-10 board clients simultaneously.

Anatomy of a single engagement deployment

Mapping horizontal features to vertical advisory usage

The enterprise trust model is built on verifiability

Auditability

Companies see exactly what agents accessed via data room audit trails.

Human Review

The CISO reviews all briefings in the data room viewer before board delivery.

Scoped Access

Strict MCP access controls, scoped specifically per engagement.

Zero-Knowledge

Encrypted environments guarantee that company security posture data never leaves the ecosystem.

Powered by existing SG/Send infrastructure

Creating the market with an open-source template

Don't wait for the market to form. Ship a public, forkable template that any security consultant or advisory practice can deploy instantly.

The dual-template deployment strategy

Core Repository: Cyber Boardroom Template Source

Path 1: Generic Template

CISO

Advisory

Board Member

Sector-neutral. Built for any external CISO to fork, customize, and apply to their own board engagements.

Deploy Globally

Path 2: SG/Send Dogfood Version

SG/Send
(Public Company)

Cyber Boardroom applied directly to SG/Send itself. A live, working example applied to a real public company to prove end-to-end functionality.

Proven
Functionality

The dogfood version creates a dual-adoption flywheel

Platform infrastructure vs. vertical application

	SG/Send Standalone	Cyber Boardroom on SG/Send
Market	Anyone sending secrets	Cybersecurity board advisory
Value Prop	Encrypted file transfer	Agentic consulting platform
Data Rooms	Storage/sharing	Agent workspace + client delivery
Revenue Model	Usage-based	Engagement-based

Just like the healthcare example, CBR is simply a packaging of horizontal infra with domain-specific CLAUDE.md roles and sector templates.

Bridging the gap to the PKI future

**Symmetric-Mode
Market (Today)**

**PKI-Enabled Future
(Key-based access,
verified identities)**

SG/Send needs the PKI market to grow for mass adoption of advanced features, but already dominates the symmetric-mode file transfer space today.

By riding SG/Send's existing symmetric-mode infrastructure, Cyber Boardroom launches immediately while seamlessly building toward a fully PKI-enabled future state.

PKI-Enabled Future
(Key-based access,
verified identities)

Immediate execution milestones

Phase 1 (Immediate)

Create cbr-engagement-template repo. ✓

Define 7 generic roles: Athena, Librarian, Journalist, Financial Analyst, Business Exec, Sector Specialist, Sherpa. ✓

Publish sector template (Healthcare/Financial) and Dogfood version. ✓

Phase 2 (Next Sprint)

Enable forkable engagements for CISO contacts.

Route questions to SG/Send's Sherpa.

Demonstrate live E2E flow: Question to Agent Research to Briefing Draft to Encrypted Delivery.

Future productization and commercial state (Phase 3)

List Cyber Boardroom natively as a vertical use case on sgraph.ai. ✓

Implement engagement pricing model (Calculated as: Per-client data room + Agent compute). ✓

Validate compliance mappings across 3 core sector templates: Healthcare, Fintech, and Technology. ✓
