SG/Send: Direction & Milestones

Strategic alignment for the next phase of growth.

The Purpose of This Update

We are transitioning from a validated MVP to a scalable, frictionless ecosystem. To ensure we build exactly what is needed, we require confirmation on three strategic pillars.

☐

1. Confirm Direction

Is the move to PKI & LLM integration aligned with your expectations?

☐

2. Validate Priorities

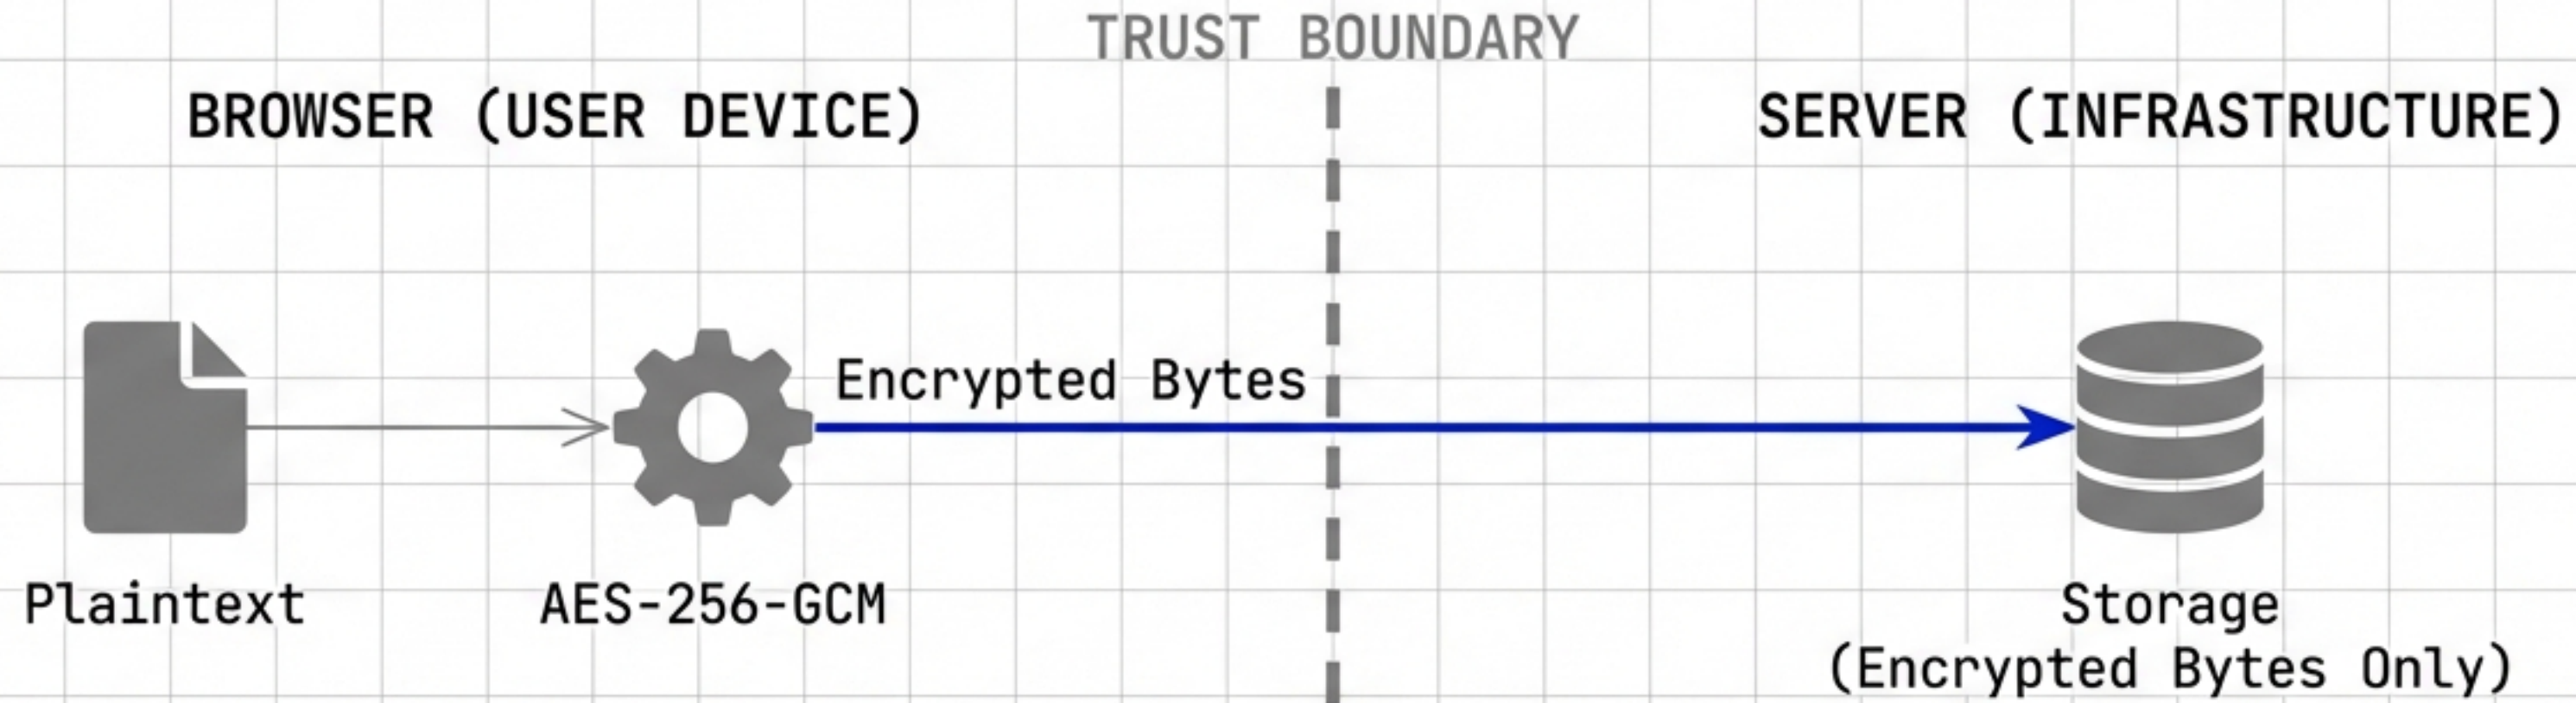

Is the sequence (UX -> Workflow -> Revenue) correct?

☐

3. Select Deployment Model

Which instance type (Managed vs. Self-Hosted) fits your portfolio?

Validated Foundation: Verified Zero-Knowledge v0.4.17 Current Architecture

The Strategic Roadmap

Three steps to frictionless security.

STEP 1: FRICTION REMOVAL

PKI

Goal: Eliminate the "Second Channel".
Mechanism: Recipient-addressed encryption.

STEP 2: WORKFLOW INTEGRATION

LLM Integration

Goal: Meeting users where they work.
Mechanism: "Claude, send this securely."

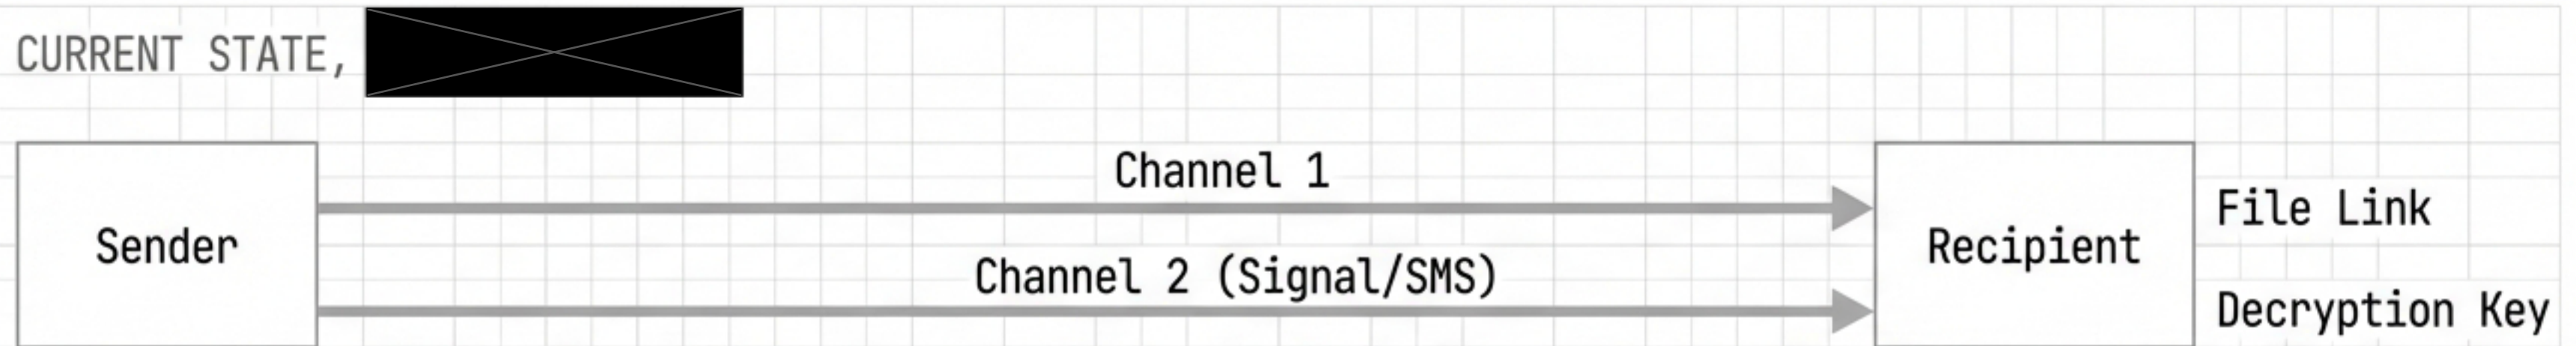

STEP 3: COMMERCIALIZATION

Dedicated Instances

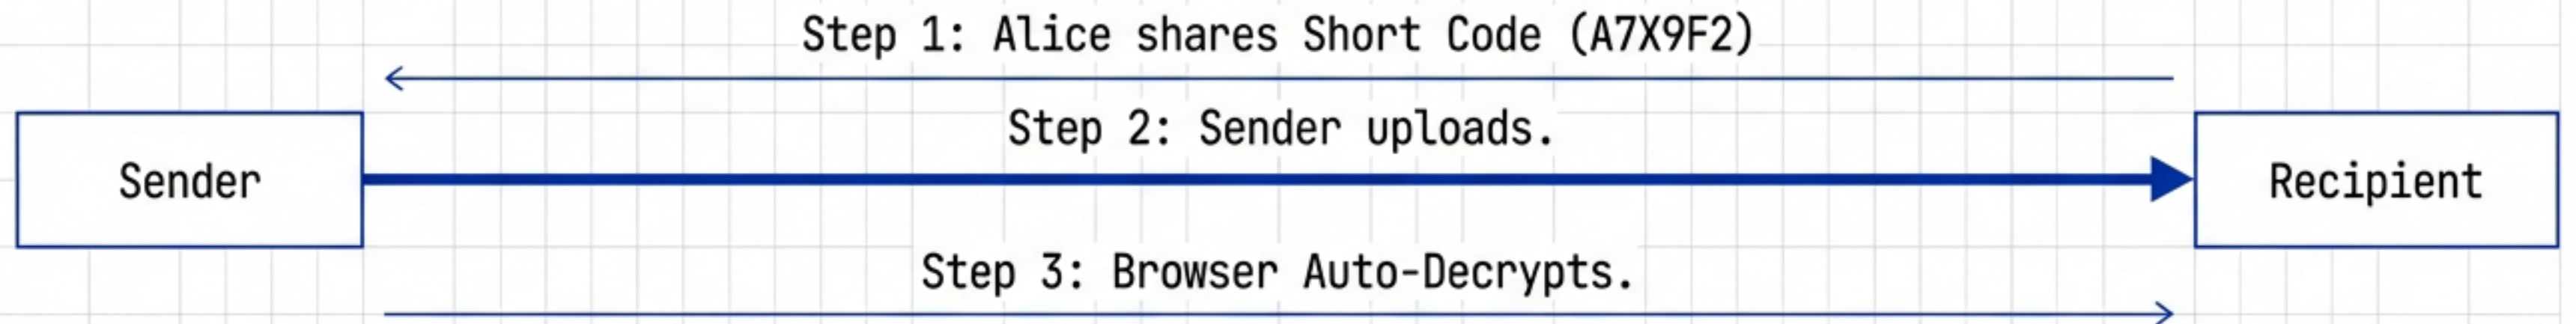

Goal: Enterprise control and revenue.
Mechanism: Branded, isolated deployments.

Step 1: 'Send to Alice' – Eliminating Key Exchange

High Friction / Two steps.

NEW STATE (PKI), JetBrains Mono

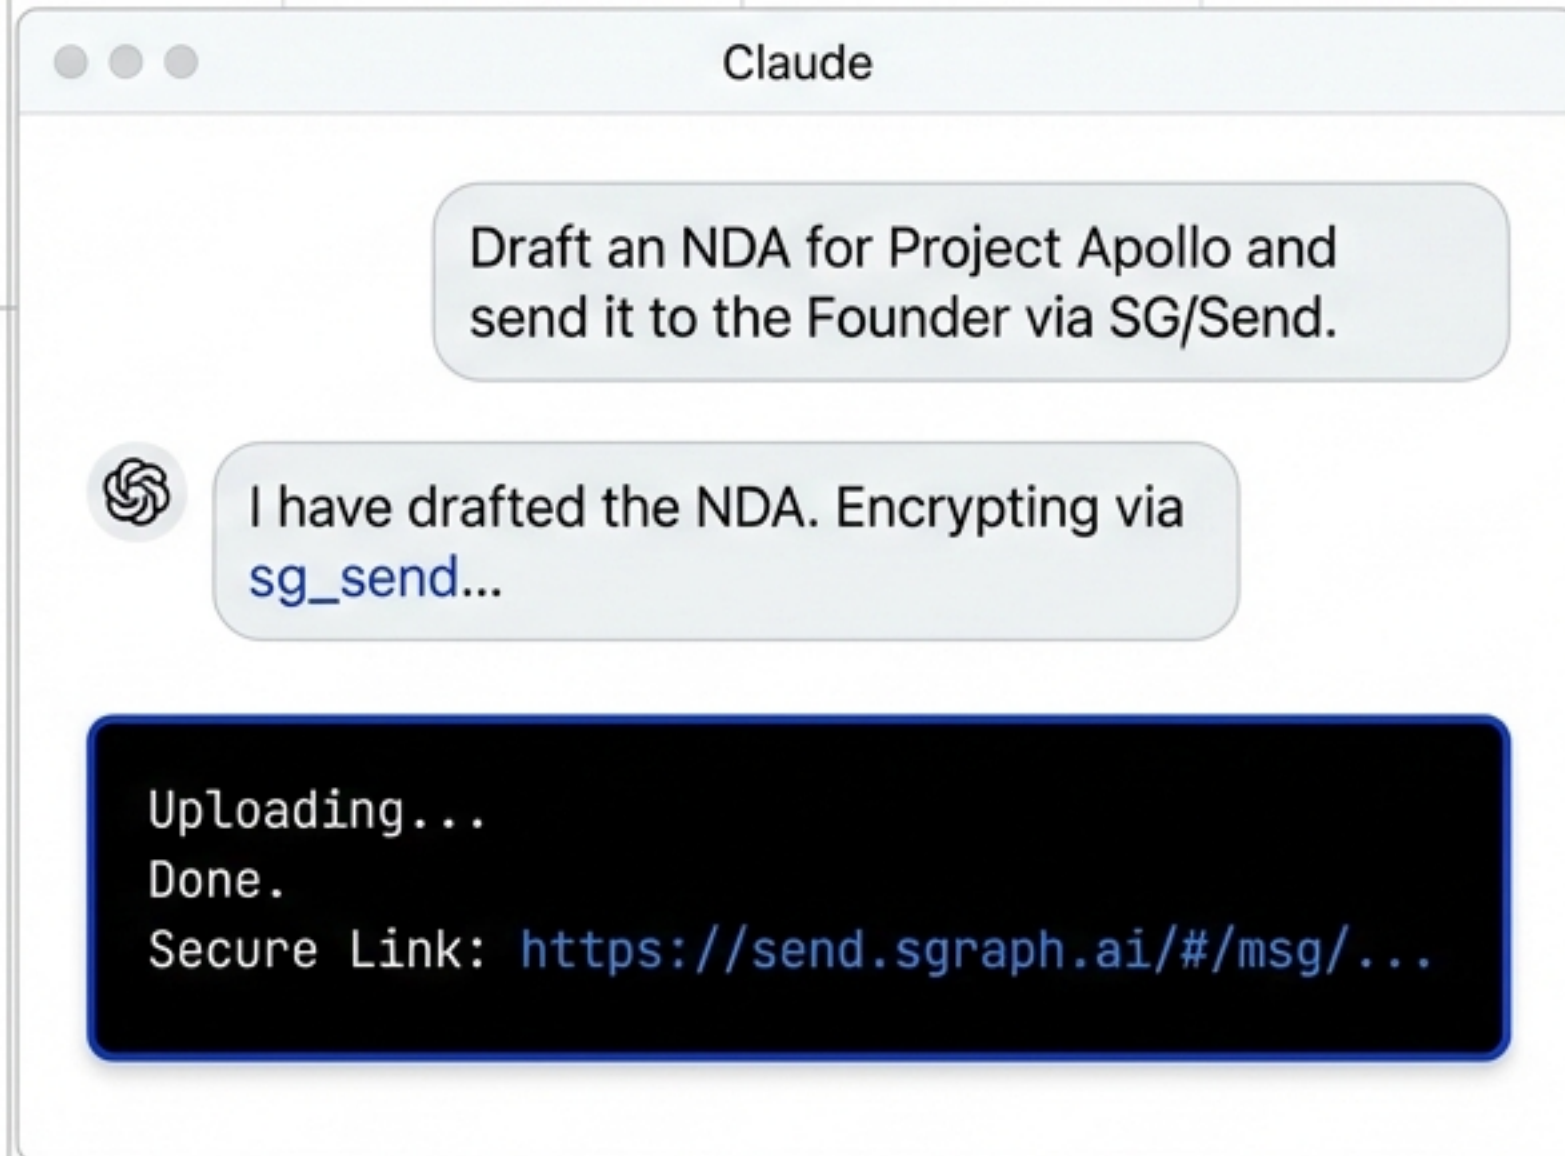

Zero Friction / One link.

Tech: Native Web Crypto API (ECDH P-256).
>97% Browser Coverage.

Step 2: LLM Integration

Meeting users where they work.

The Implementation

- **CLI Tool** (`sg_send`): For any LLM with shell access.
- **MCP Server**: Wraps the tool for Claude Desktop.
- **Security**: No new trust boundary. You already trusted Claude with the draft.

Step 3: The Commercial Engine

Dedicated Instances. High margin, high control.

MANAGED

We host, you brand. For teams needing isolation without IT headaches.

SELF-HOSTED

Deployed in YOUR AWS/GCP account. Maximum sovereignty.

EPHEMERAL

Spin up for a deal, tear down when closed. Disposable data rooms.

Economics: Serverless Architecture.

Cost: <£15/mo

Price: £49 - £999/mo

Why SG/Send Wins

	Email	WeTransfer	Intralinks	SG/Send
End-to-End Encrypted	✗	✗	✗	✓
Zero-Knowledge (Server Blind)	✗	✗	✗	✓
No Recipient Account	✓	✓	✗	✓
Self-Hostable	✗	✗	✗	✓

“Most existing solutions are uncomfortable to use, overkill, or don’t provide a zero-knowledge guarantee.” — Security Reviewer

Velocity of Execution

FEBRUARY (DELIVERED)

- ✓ MVP Live (End-to-end encryption)
- ✓ Security Review (No critical findings)
- ✓ Industry Validation (Investor Briefing)

NEXT MEETING (UPCOMING)

- - - → Live PKI Demo (No key exchange)
- - - → Live Claude Integration
- - - → First Branded Instance Live

Technology Choices & Philosophy

Browser Encryption

Server compromise = zero privacy impact. The core security model.

Open Source

Apache 2.0. Transparency builds trust. "Not optional" for zero-knowledge tools.

Serverless

Lambda + S3. Scales to zero. No idle costs. High margins.

Vanilla JS

No frameworks. Browser as platform. Ensures long-term stability.

Decision 1: Confirming Direction

Is this the right order of operations for your portfolio?

1

PRIORITY ONE: PKI

(Solving UX Friction)

2

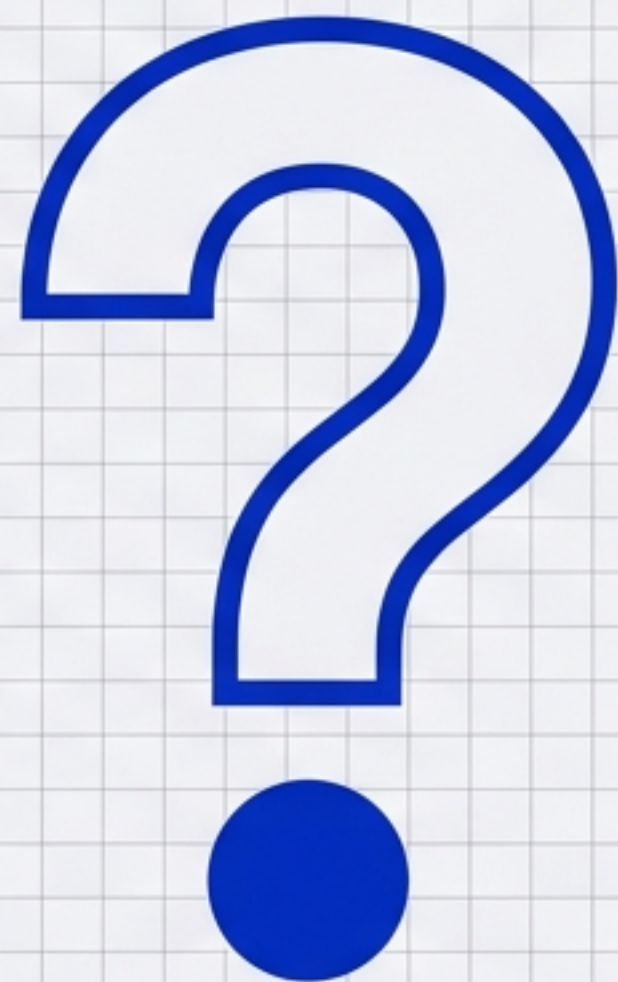

PRIORITY TWO: LLM

(Solving Workflow Friction)

3

PRIORITY THREE: DEDICATED INSTANCES

(Revenue Generation)

Decision 2: Deployment Preferences

We want to build your instance for the next meeting. Which model fits?

MANAGED

Your brand.
Our infrastructure.

SELF-HOSTED

Your AWS/GCP account.
Total sovereignty.

USE CASE SPECIFIC

Deal room?
Credential sharing?

Action: Select a preference.

What We Will Show You Next

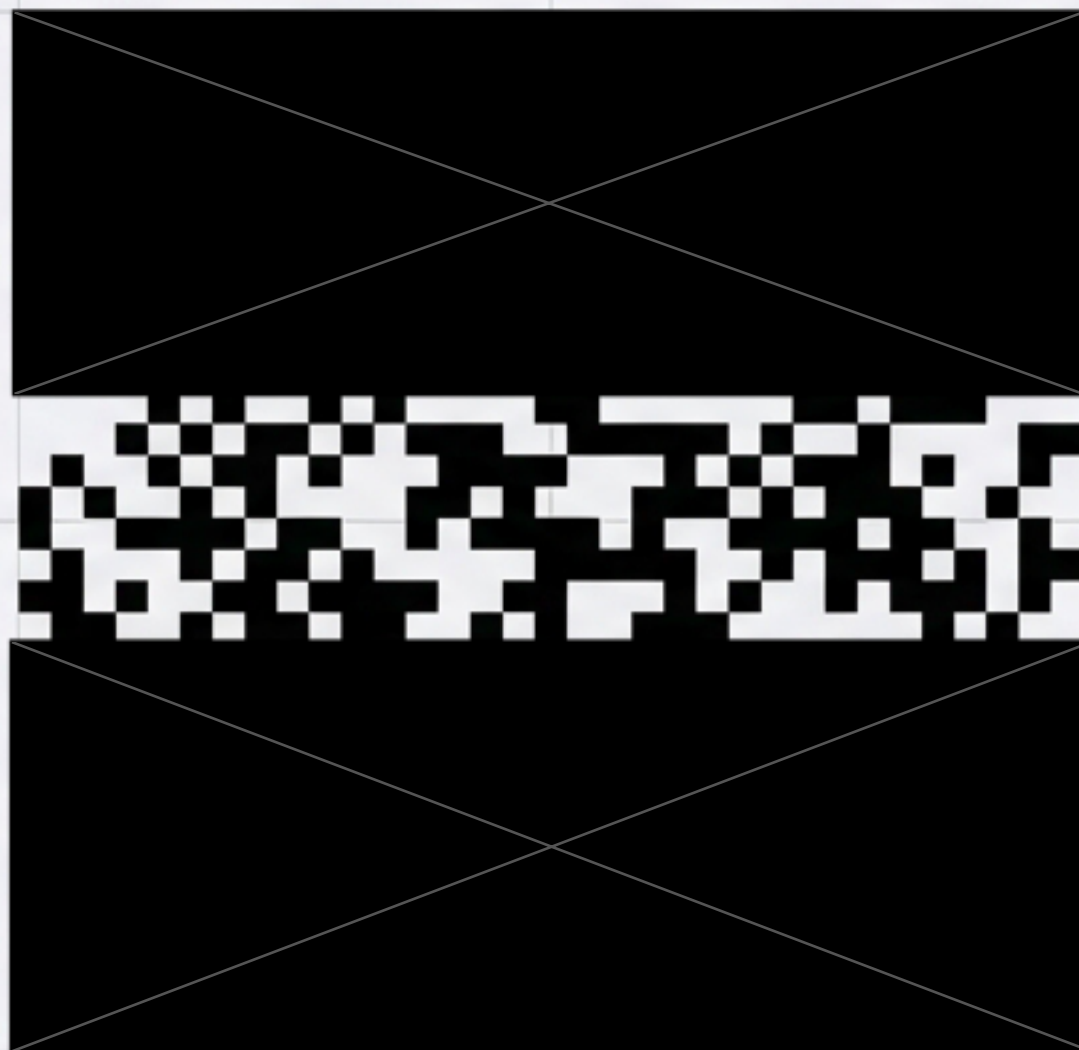

- Live PKI Demo (No key exchange)
- Live Claude Workflow (Real-time)
- Your Branded Instance (Live deployment)

Call to Action:

Please review this deck and provide feedback on priorities prior to the demo meeting.
