

From Voice to Polished Asset

A strategic blueprint for commercialising human-in-the-loop GenAI document creation.

The Service Wrapper for Commodity Tech

"The models are good enough. But most people lack the time, the tools, or the taste to use them effectively."

Service

Early digital photography was commodity. The value was turning what the customer had into what they wanted.

Service

GenAI is commodity. The exact same service opportunity exists now.

The Core Input/Output Mechanic

Multilingual variants available for any output.

A Validated Daily Workflow

"The human is already doing this daily. This briefing process is the service in miniature. The question is: can other people pay for it?"

The Human Moat

The Art of Questioning

Micro-decisions on what to probe or reframe. 30 minutes with a skilled interviewer beats three hours with an amateur.

Framing & Taste

Editorial judgment LLMs lack. Knowing when to simplify an infographic or add depth to a document.

Brand & Trust

Buying the person and perspective. Known expert insights carry more weight than anonymous LLM output.

Iteration & Discovery

Clarifying thinking through drafts and feedback loops.

**The service
enables
discovery, not
just production.**

The Multilingual Multiplier

- Awareness of GenAI tools is drastically lower outside English-speaking communities.
- One English input translates into polished decks, reports, and audio in five languages simultaneously.
- Backed by established SG/Send multilingual infrastructure (17 language variants already live).

Give me 30 minutes in your language. I'll return a polished deck, report, and audio briefing in your language, at a quality level you haven't seen before.

Phased Execution Strategy

"Build this on top of usage,
not ahead of it."

Phase 1: Validating Demand Manually

Interview	Zoom / WhatsApp
Transcription	Otter.ai / Whisper
Creation	Claude / ChatGPT
Audio	NotebookLM
Billing	Stripe

Barrier
to Entry:
ZERO

Charge £50-£500 per deliverable. Align expectations with current LLM output. Margin improves automatically as base models improve over time without raising prices.

Phases 2 & 3: Technology and Automation

Infrastructure

- Customer upload portal
- SG/Send encrypted vault
- Consumption-based Stripe billing

Automation

- Auto-transcription on upload
- Auto-first-draft generation
- Template-based slide generation

The human role shifts from doing the work to reviewing and refining the work.

Phase 4: The Full Enterprise Platform

Self-service for simple, high-volume jobs.

Custom workflows designed specifically per customer.

Private vaults where corporate data never leaves the environment.

Proof of ownership, verifiable editing history, and digital signatures at every step.

The Corporate Advantage

Rigid Corporate Demands

Data cannot leave environment

Audit trail required

Proof of ownership

Encrypted delivery

Multi-language compliance

SG/Send's Built-In Answers

Zero-knowledge encryption / deploy in customer cloud.

Every file version and edit is tracked.

Unbroken provenance chain from creation to delivery.

Core product feature (files encrypted in browser).

17 language variants supported today.

Market Segments and Economics

Immediate Actions for Launch

1

Validate: Ask 3-5 targets: 'Would you pay to turn a 30-min chat into a deck, report, and audio brief? How much?'

Owner: Human

2

Build Portfolio: Convert 3 existing memos into the full output stack (deck, report, infographic, audio).

Owners: Ambassador + Designer

3

Launch Web Presence: Add service description/landing page to sgraph.ai.

Owner: Developer

4

Test Delivery: Price first 5 jobs at cost to validate quality expectations.

Owner: Human

5

Measure: Track time per deliverable to establish strict unit economics.

Owner: Accountant
