

Secure Send: From File Sharing App to Zero-Knowledge Infrastructure

Strategic Roadmap & Feature Proposals (Version 1.0)

The app is the showcase; the infrastructure is the business.

Secure Send's zero-knowledge encrypted storage is a primitive—a building block other apps and workflows need. Currently, it is locked behind a web UI.

The Payment Analogy

Stripe is not just a payment page.
It is payment infrastructure.

The Secure Send Thesis

Secure Send is not just a web page.
It is encrypted transfer infrastructure.

Transition: Human-to-Human → Machine-to-Machine

Prioritizing the roadmap by Impact-to-Effort ratio.

Top 3 Winners

-  **Gold: CLI Tool + SDK**
(Unlocks developer market)
-  **Silver: MCP Server**
(AI Agent Killer Feature)
-  **Bronze: One-Time Secrets**
(Viral Acquisition)

Unlocking the Developer Ecosystem

Proposal 1: CLI Tool & SDK

```
$ cat secret.txt | ss send --token tok_abc123  
> Encrypting locally...  
> Uploading blob...  
> Success: https://send.app/d/xyz789#key_123
```

Philosophy: Client-side local encryption.
The server never sees the key.

Functionality: Piping support for automation.

Config: ~/.secure-send/config.yaml handles defaults.

Proposal 8: Webhooks

Payload contains metadata only. Never content.

The MCP Server: Missing link for Agent-to-Agent privacy

Proposal 2: Model Context Protocol Integration

A Day in the Life of an Agent

Impact: Enables secure 'Agentic Pipelines' without data leakage. No competitor offers this.

One-Time Secrets: A high-viral acquisition magnet.

Proposal 3: Sub-product for passwords & API keys

Why it works:

- Massive TAM: Developers sharing keys, HR emailing credentials.
- SEO Goldmine: Targets 'share password securely'.
- Viral Loop: Every secret shared exposes a new user.

secret.brand.com

Delete after: 1 view

Create Secret Link

Distinct subdomain for SEO dominance.

Reducing friction: Meeting users in the Browser and OS.

Proposal 4: Browser Extension

Helvetica Now Display (JetBrains Mono).
Background worker handles encryption. Auto-fills keys.

Proposal 10: Mobile PWA Share Sheet

Helvetica Now Caletannn (JetBrains Mono).
Captures the WhatsApp/Telegram casual sharing flow.

Disrupting Enterprise Data Rooms with Zero-Knowledge.

Proposal 5: Data Room Mode

Legacy (Intralinks/Datasite)	Secure Send Enterprise
 Price: £3,000 - £10,000 / month  Security: Server-side encryption (They hold the keys)  UX: Clunky, slow	 Price: ~£999 / month  Security: Zero-Knowledge (We never see the keys)  UX: Modern, fast, drag-and-drop
 Immediate internal use: FGraph-AI and MyFeeds Investor Relations & Board Packs.	

Specialized vertical plugins capture regulated markets. Proposal 14 & 12

Legal

Notarisation,
Privilege Labels,
Matter-based rooms

Healthcare

HIPAA compliance
mode, PHI handling
guidance

Finance

Audit export, SOX
compliance trails,
Proof of Delivery

Journalism

SecureDrop
Alternative.

- Tor-friendly .onion address
- No IP logging
- No browser fingerprinting
- Source protection

Maximum Privacy features build a "High Trust" brand halo.

Proposal 6: P2P / WebRTC Mode

Proposal 9: Warrant Canary

Standard practice for privacy leaders like Signal & ProtonMail.

Education as Marketing: Turning transparency into traffic.

Proposal 11: Educational Platform

Goal: Rank for high-intent terms like "end-to-end encryption explained" and build domain authority.

Advanced logic for complex transfer scenarios

Proposal 7: Multi-Recipient Sharing

Encrypt once, wrap key separately.
Granular tracking of who downloaded
what.

Proposal 13: Time-Locked Transfers

Embargoed press releases, Sealed bids,
Dead Man's Switch.

Tech: Server-held key release evolving
to threshold secret sharing.

A layered revenue model driven by Enterprise utility.

Proposal 15: Revenue Diversification

The Viral Flywheel: Every transfer is a targeted ad.

Competitive Moat

Unlike WeTransfer, encryption happens **before** upload.

We position on security at the exact moment of use.

Amplification:
"Powered by" footer & Referral Credits.

We are building the standard for secure, ephemeral data transport.

Immediate Next Steps (Issues FS Actions)

- ☒ 1. Instantiate Proposal 1: Begin CLI/SDK dual repo structure.
- ☒ 2. Build Proposal 2: Develop MCP Server for Agent workflows.
- ☒ 3. Launch Proposal 3: Deploy One-Time Secrets subdomain.

Secure Send

Zero Knowledge. Infinite Trust.
