

SG Send: The First MVP

A Serverless, Client-Side Encrypted File Sharing Solution

Status: Beta Access

Date: 15 Feb 2026

Release: v0.1

Built on a Fully Serverless Architecture

SG Send is not a traditional file host. It is a fully serverless application designed for scalability and security. By removing the traditional server management layer, the application ensures that data handling is efficient and the infrastructure scales "quite nicely" as demand increases.

Key Takeaway: A proper client-side solution, not a standard upload form.

The Server Is Blind

Zero-Knowledge Security Model

The Server View

- The server acts purely as a temporary holding vessel.
- We don't capture the file name.
- We don't capture the file content.

The User View

The encryption key is **generated locally** and held only by the user. The platform **never sees, stores, or transmits the unencrypted key.**

Mode 1: Secure File Transfer

- 1. Input: Drag and drop interface.
- 2. Compatibility: Supports JSON, documents, and binaries.
- 3. Process: Client-side encryption triggers immediately upon click.

Mode 2: Secret Text & Password Exchange

Not just for files.

Text input is treated with the same rigorous encryption standards as binary files. Encrypted locally before network transmission.

The Encryption Lifecycle

Local Encryption

Browser encrypts data.

Upload

Only encrypted
blob sent

Storage

Temporary holding.

Link Generation

Unique download link created

Crucial Detail: The file downloaded is **cryptographically identical** to the source.

Best Practice: The Two-Channel Rule

Channel 1:
The Download Link

[https://\[REDACTED\]/download/...](https://[REDACTED]/download/...)

Do not send the lock and the
key in the same package.

Channel 2:
The Decryption Key

8x99-key-secret

“You should send them this link... and now you also need to send them separately, of course, via a different channel, the decryption key.”

The Recipient Experience

Global Accessibility

Language:
Portuguese (Brazil) ▼
Selecione o idioma.

Language:
Portuguese (Portugal) ▼
Selecione o idioma.

Language:
Klingon ▼
⚡⚡⚡ ⚡⚡ ⚡⚡⚡⚡⚡⚡
Heghlu'meH QaQ jajvam

The interface automatically adapts to multiple locales, supporting distinct dialects

Current MVP Constraints

As this is the first working version (Beta), file size is currently **limited** to approximately 6MB. This ensures stability for the MVP release.

- **Ideal Use Cases:** Documents, Configuration Files (JSON), Keys, Certificates.
- **Not Ready For:** Large media assets or heavy binaries.
