

Briefing Packs: Packaging Work for Agents

A Standard for Curating Context, Optimising Token Usage, and Maximising Agent Accuracy.

Meta-Data				SWISS TECHNICAL DESIGN - APPROVED	
VERSION v0.4.3	DATE 16 Feb 2026	FROM / TO Human (Lead) / All Teams	STATUS Process definition – implement immediately		

The Context Paradox: Why Current Workflows Fail

FULL REPO ACCESS

The Noise Floor. Agents drown in irrelevant code, losing the signal in the massive repository structure.

NO REPO ACCESS

The Bottleneck. Humans must manually explain every detail, typing out context that should be automated.

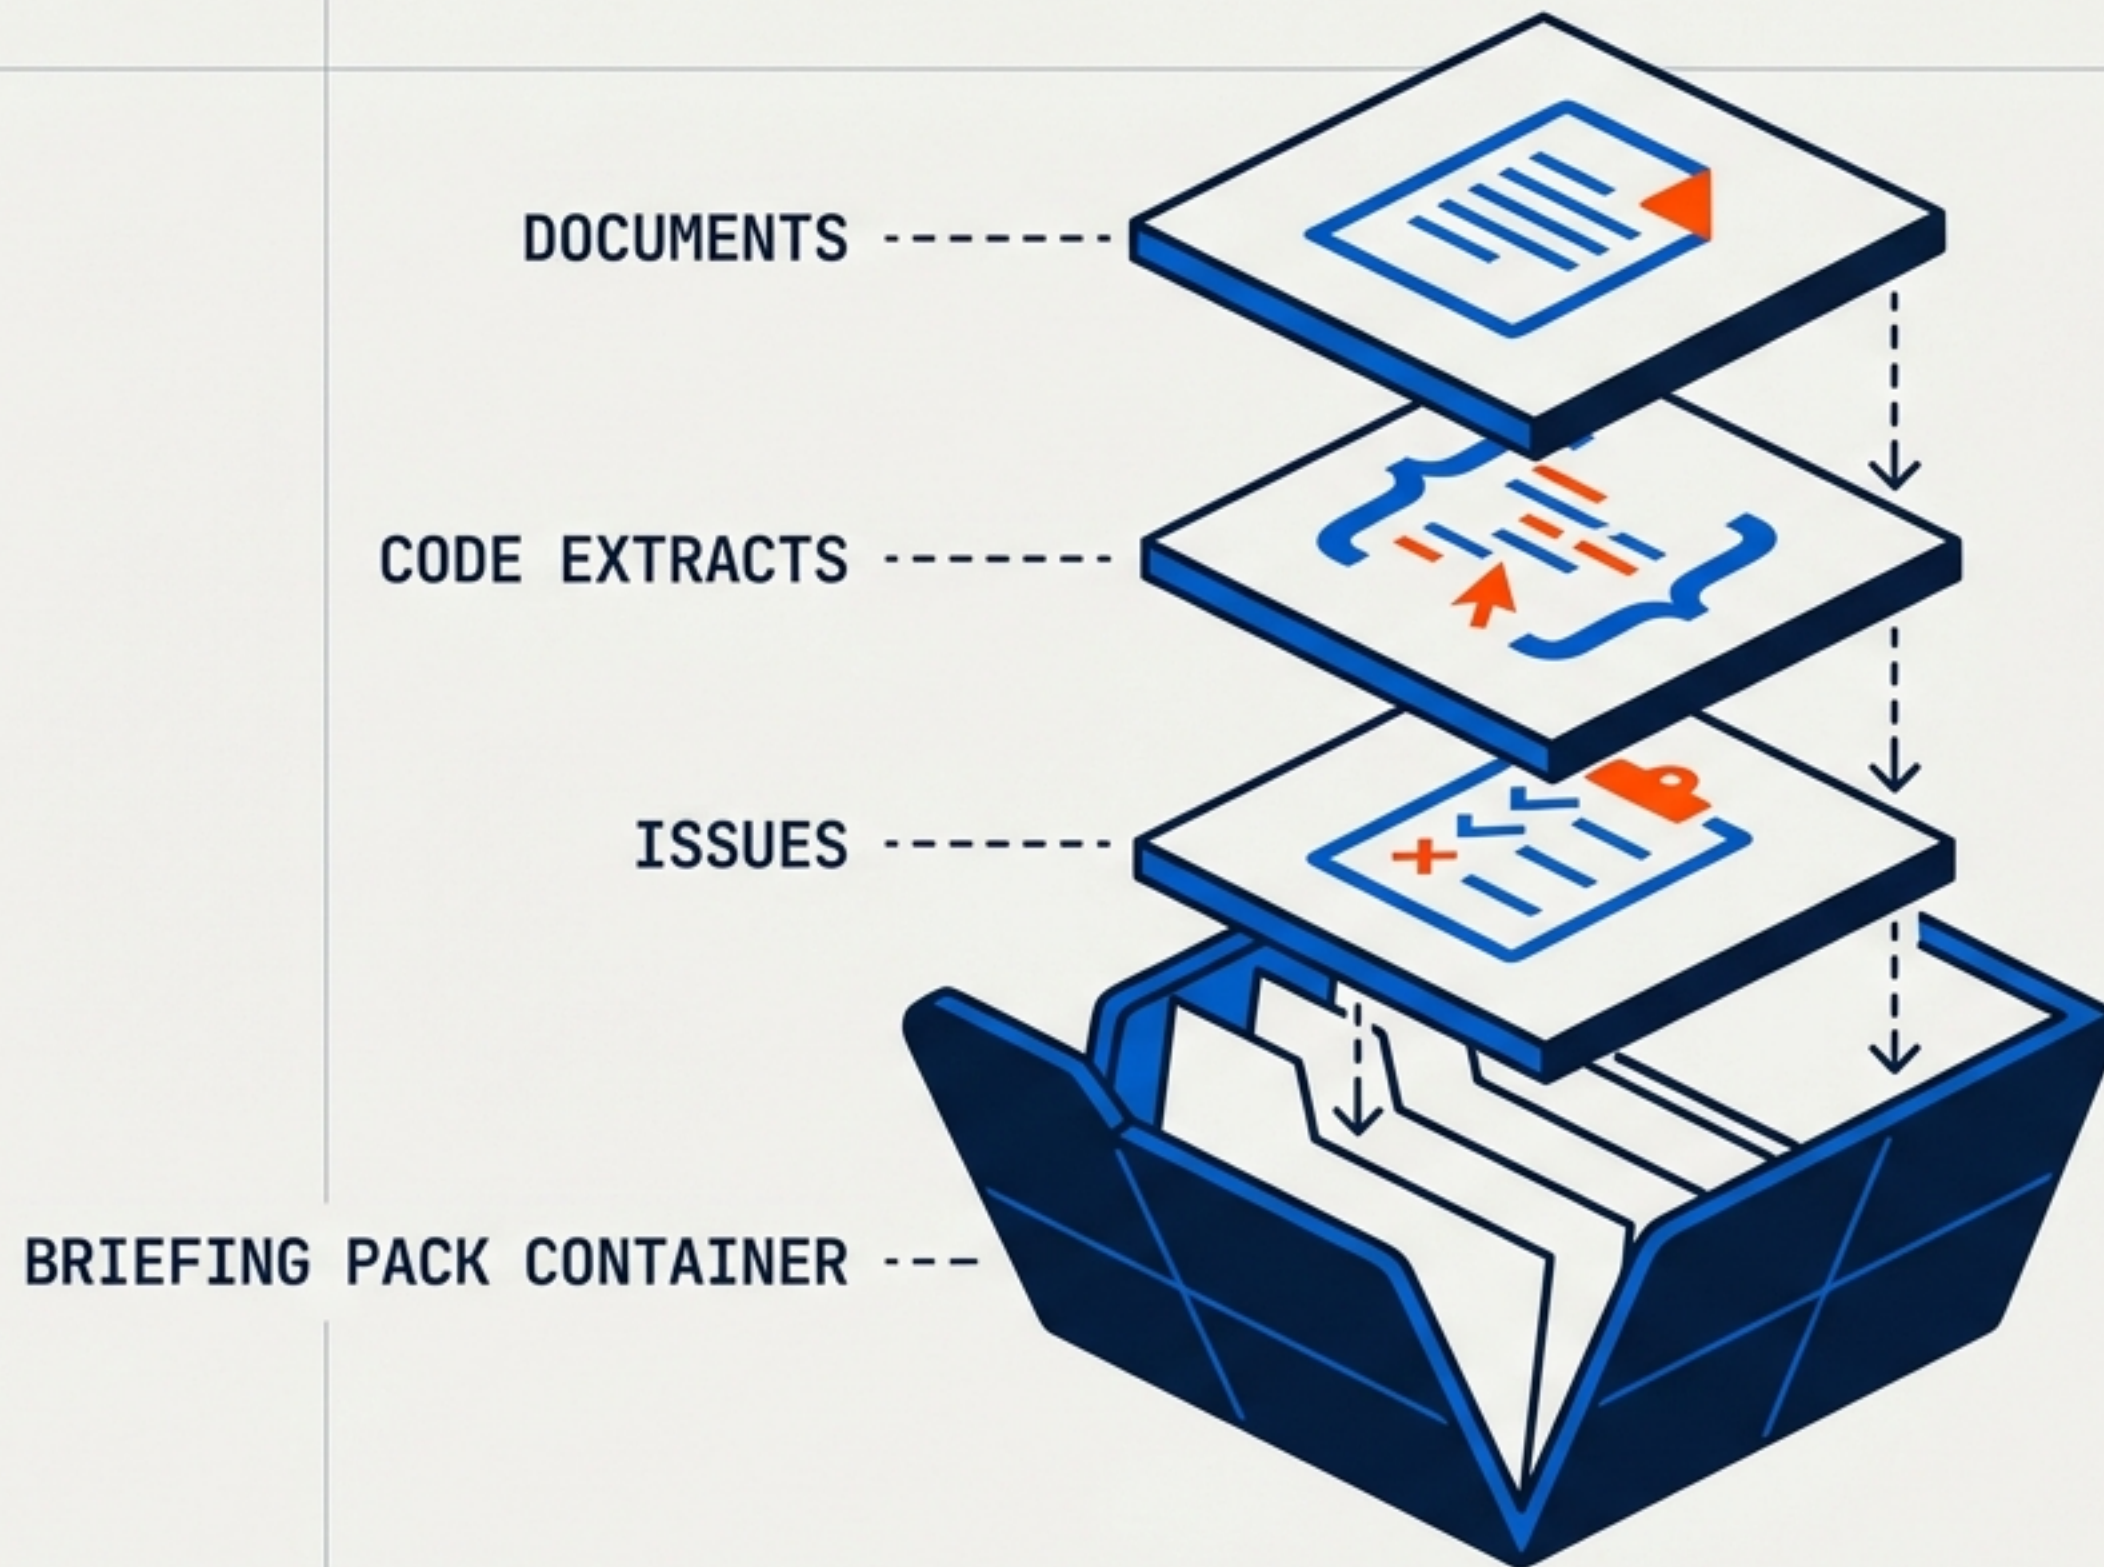

THE CONTEXT DUMP

The Token Waste. Massive dumps where 90% of the data is irrelevant noise, confusing the model.

CORE INSIGHT: Agents don't need **ALL context**. They need the **RIGHT context**.

The Solution: The Briefing Pack

DEFINITION

A curated, compressed package of exactly the context an agent needs to execute a specific piece of work. Nothing more, nothing less.

THE GOAL

To create a portable unit of work that can be zipped and dropped into any context window.

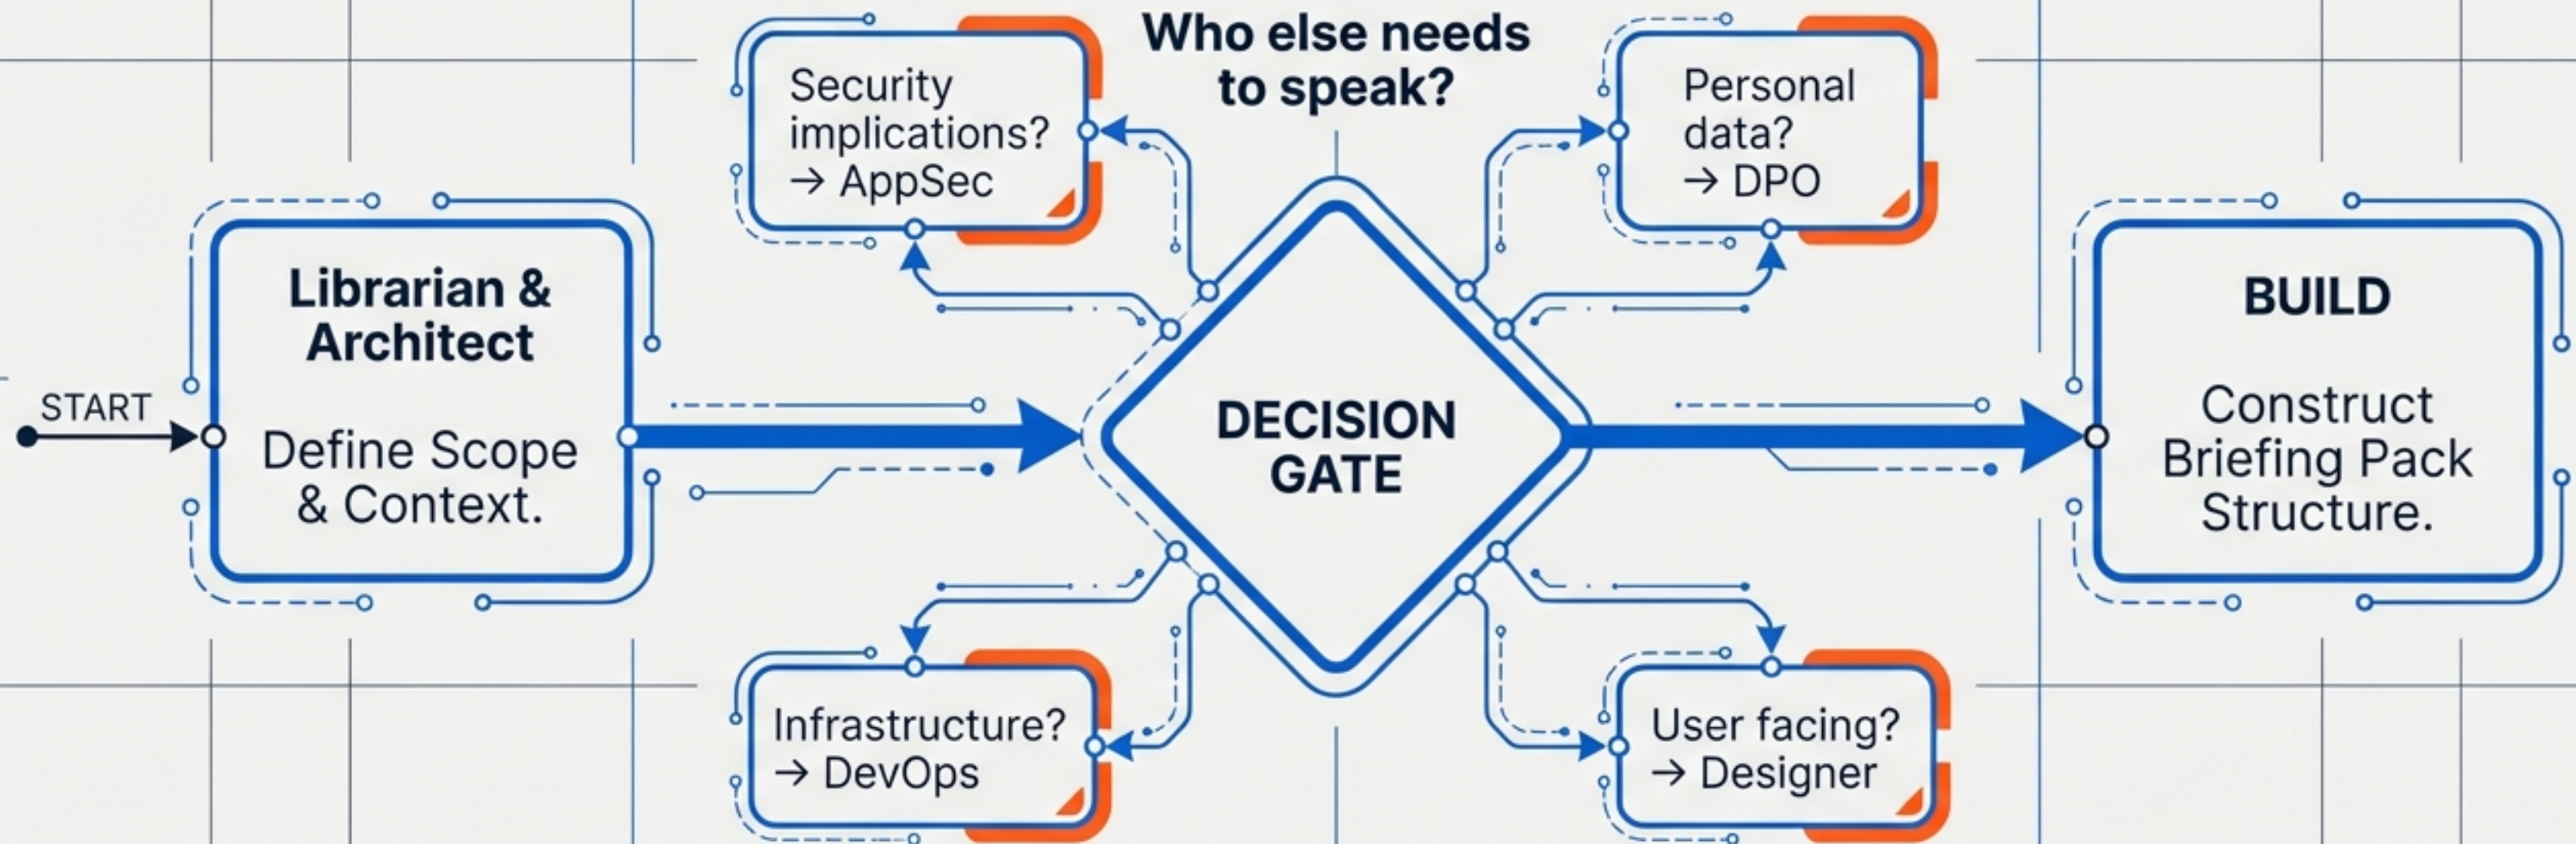

KEY PRINCIPLE

Include what is needed, point to where more lives.

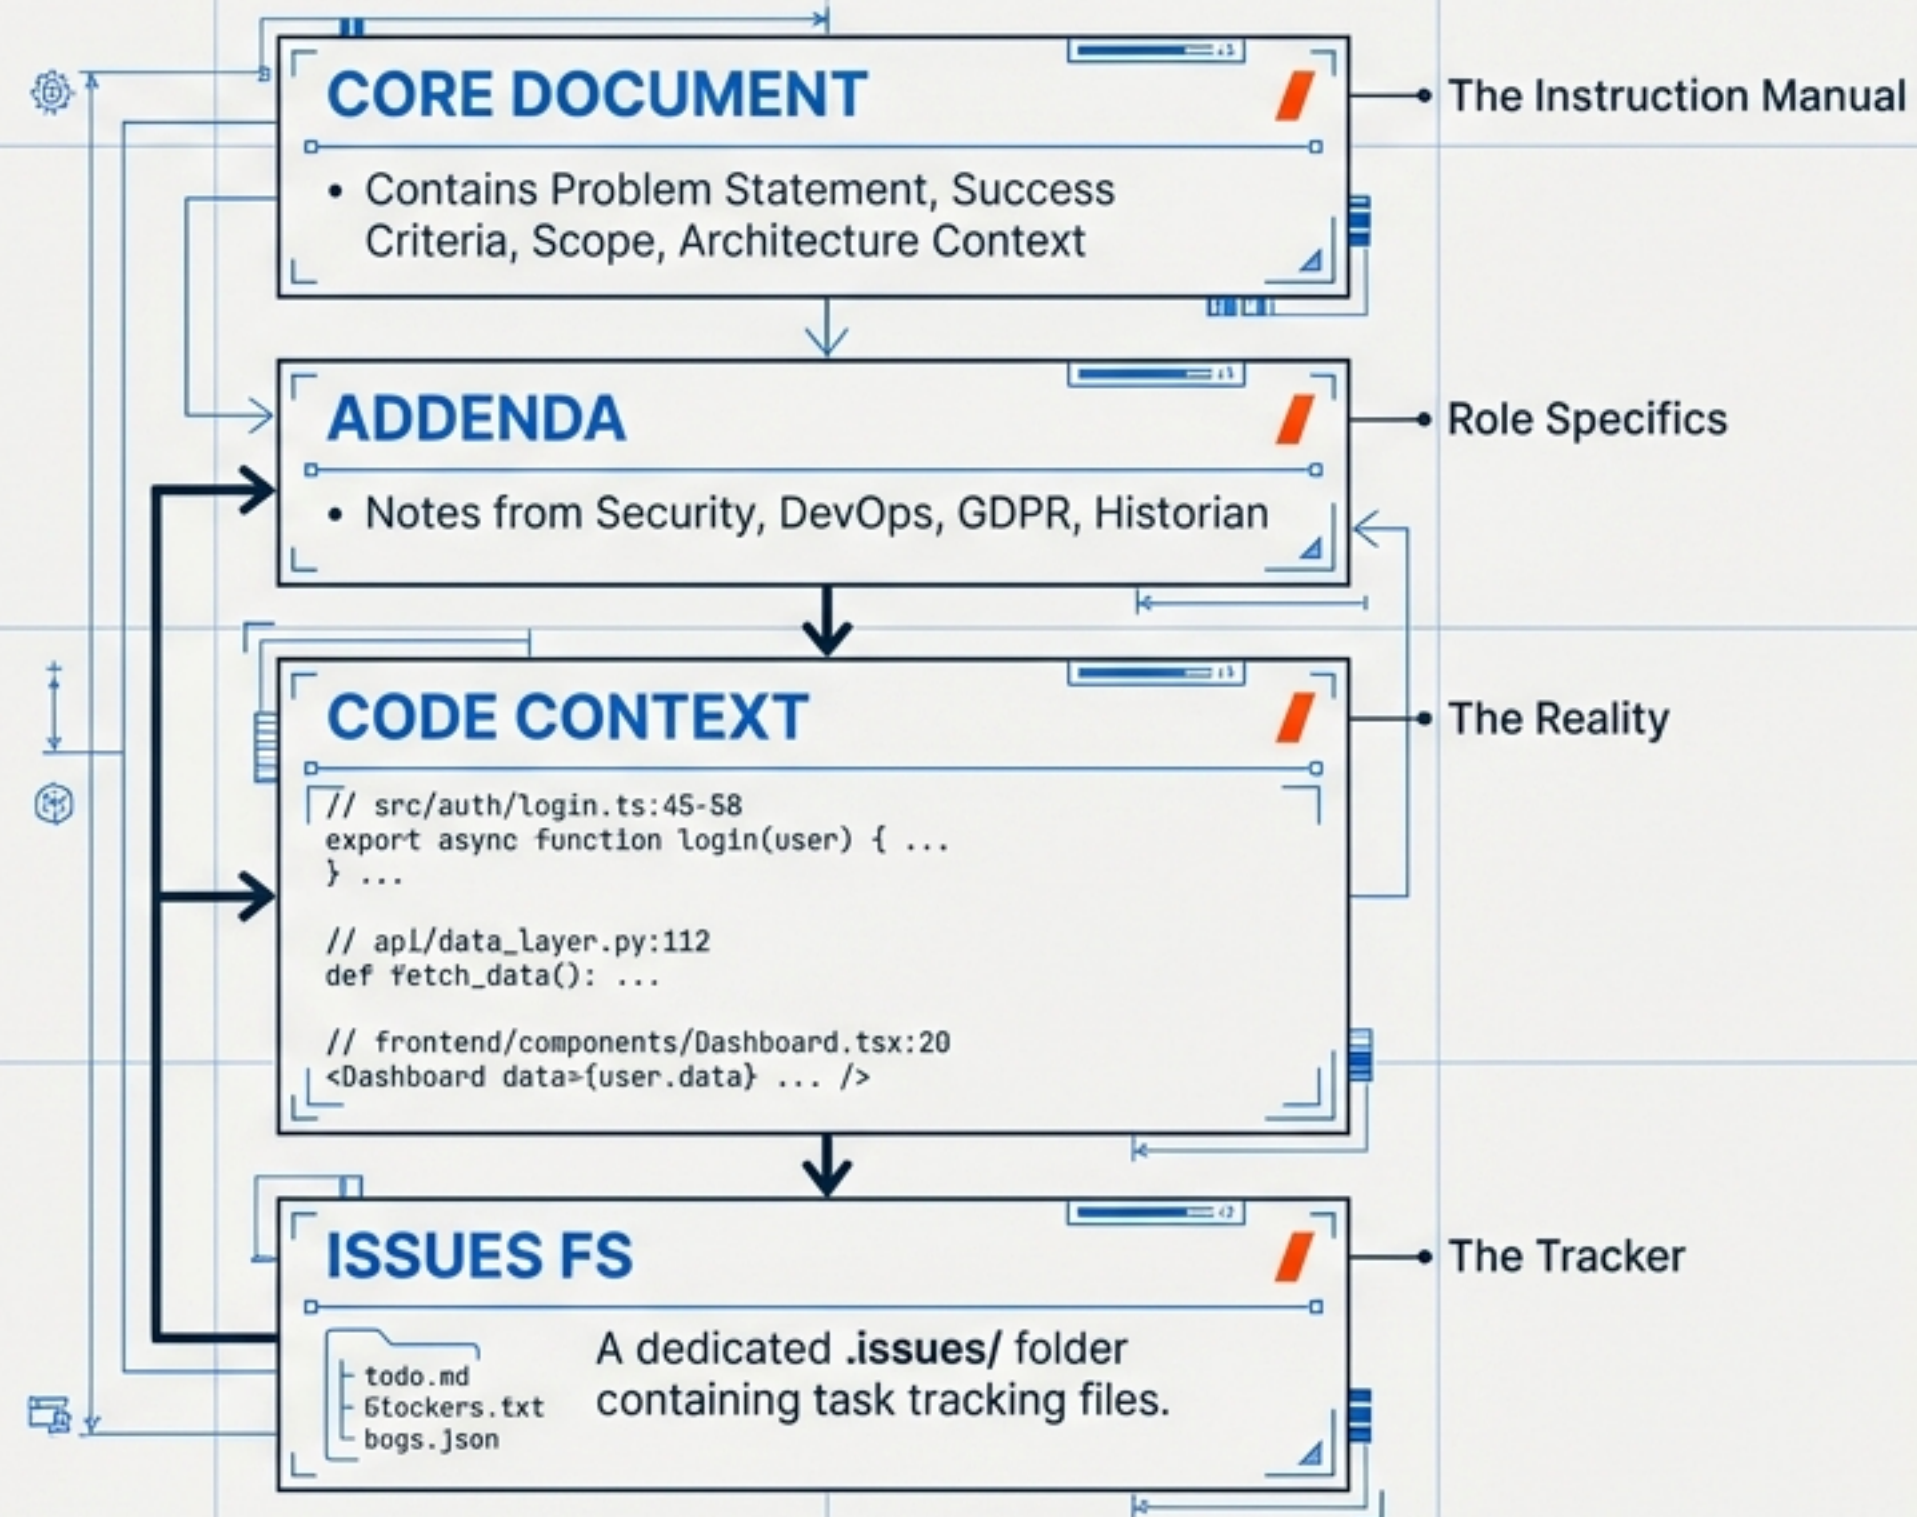

Dimensions of Work: Scaling the Pack

Workflow: Architects and Librarians Lead the Way

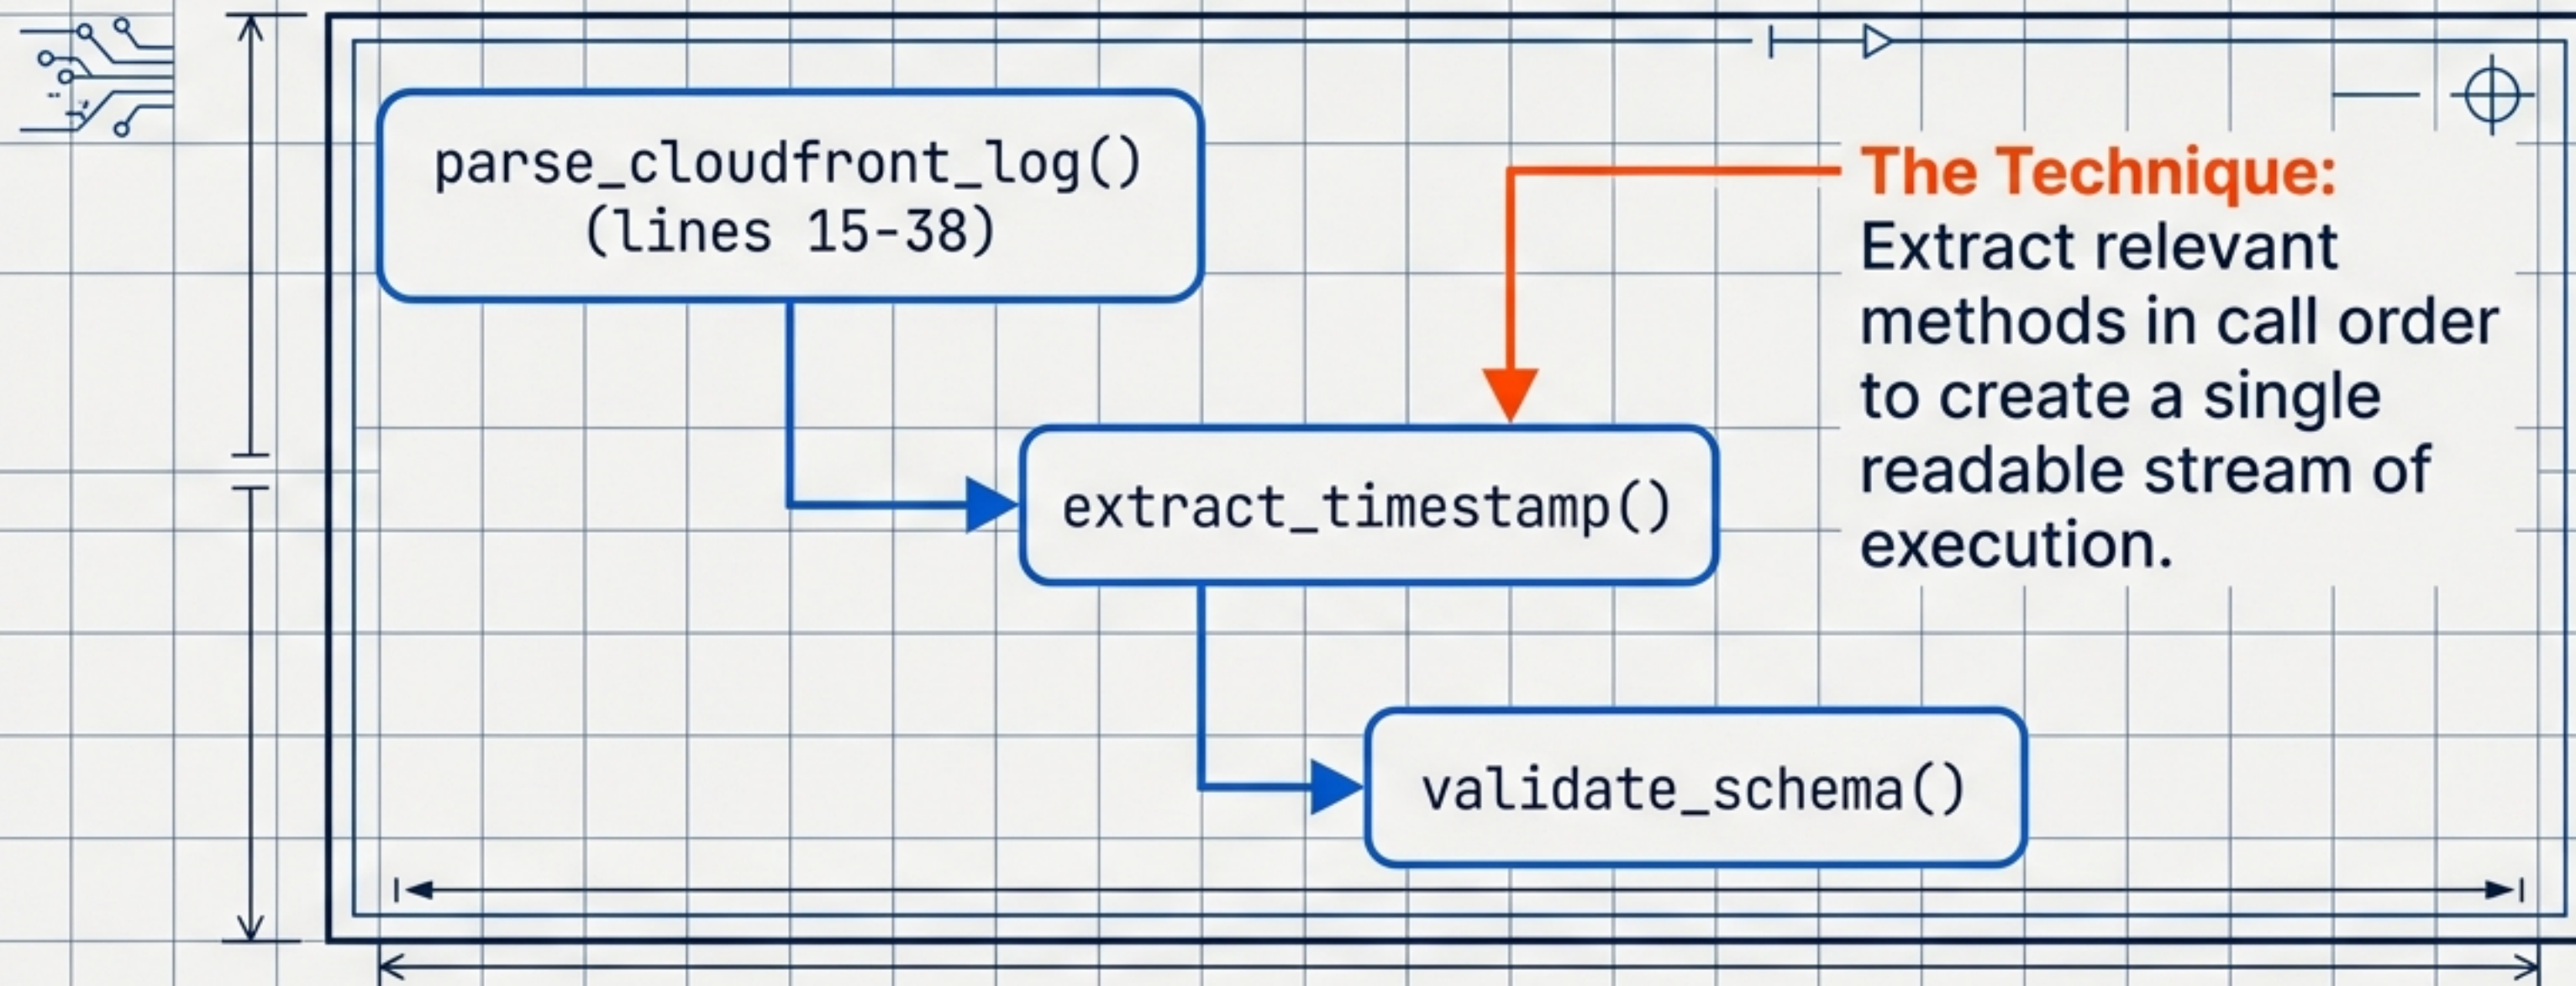

Anatomy of a Pack: The Component Layers

Code Context: The 'Method Streams' Principle

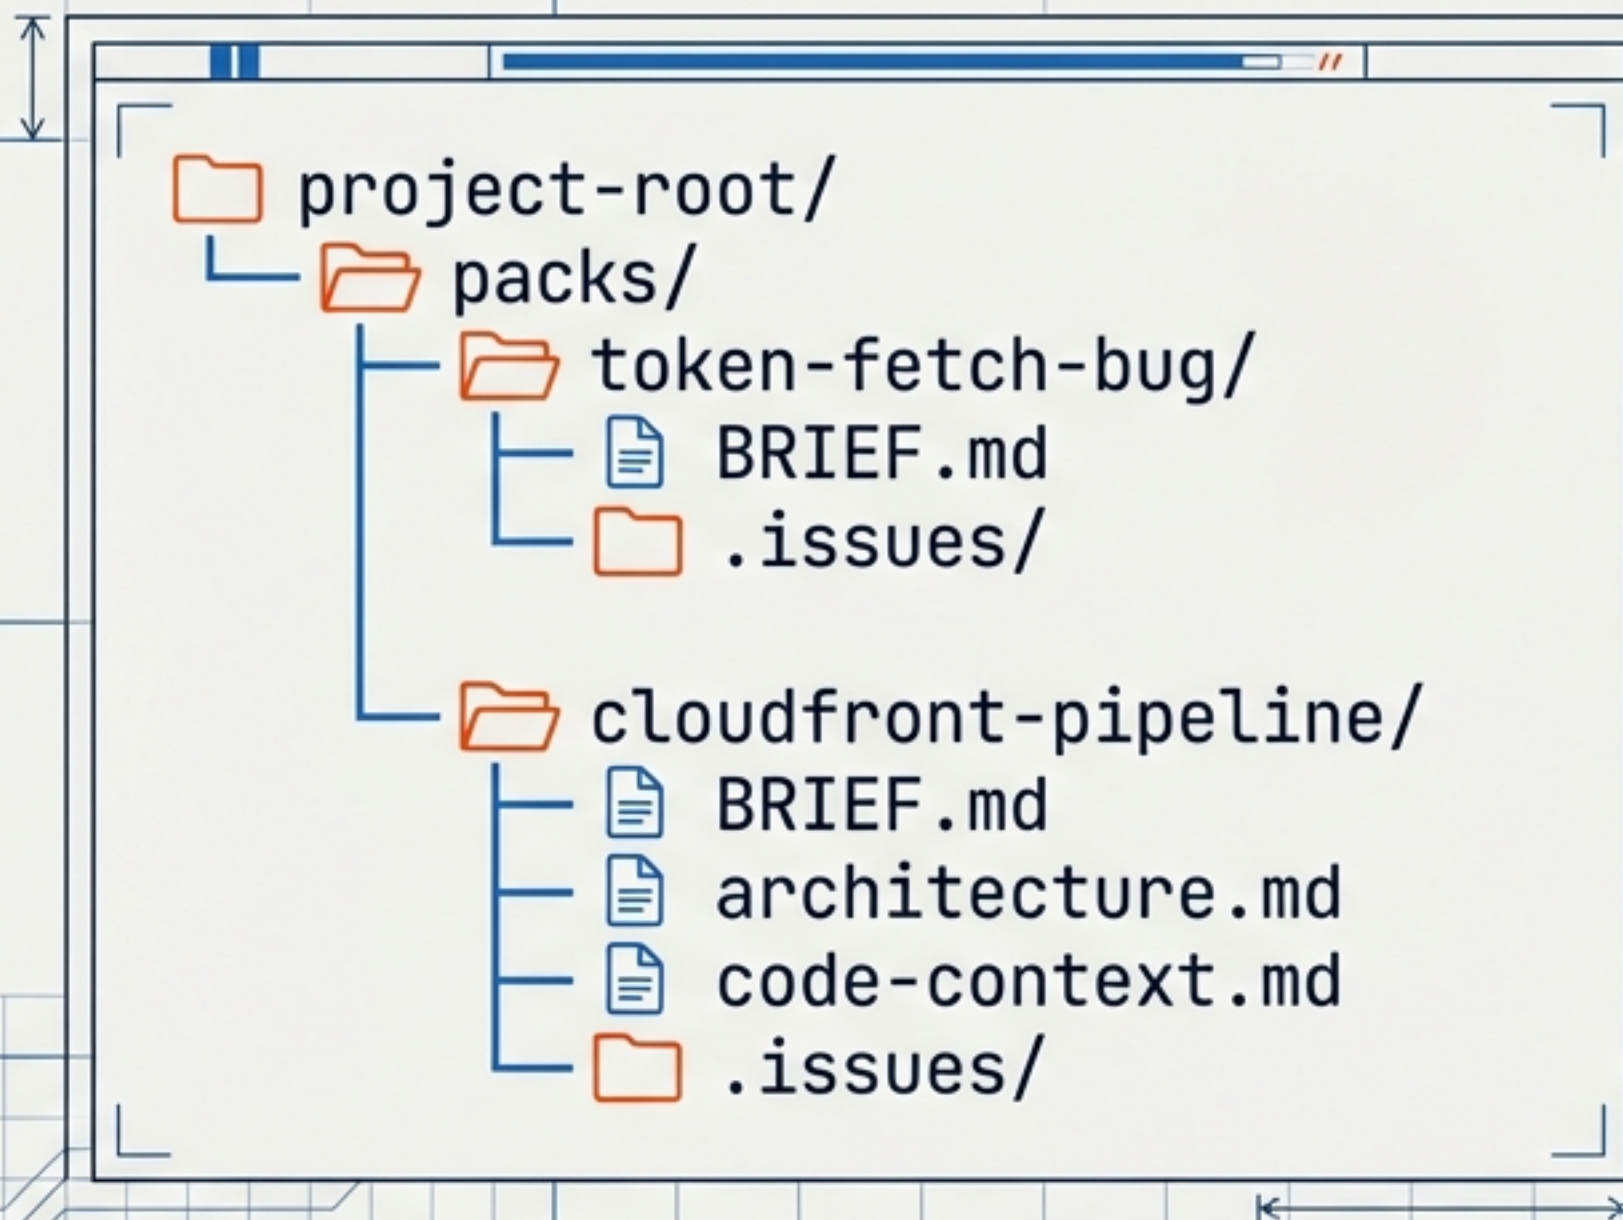

Briefing packs must reference actual code, not descriptions of code.

WHY?

Prevents hallucinations about how the code MIGHT work vs how it ACTUALLY works.

The Iron Rule: One Folder Per Pack

Git-Friendly: Branchable, committable history.

Shareable: One zip file = One brain dump.

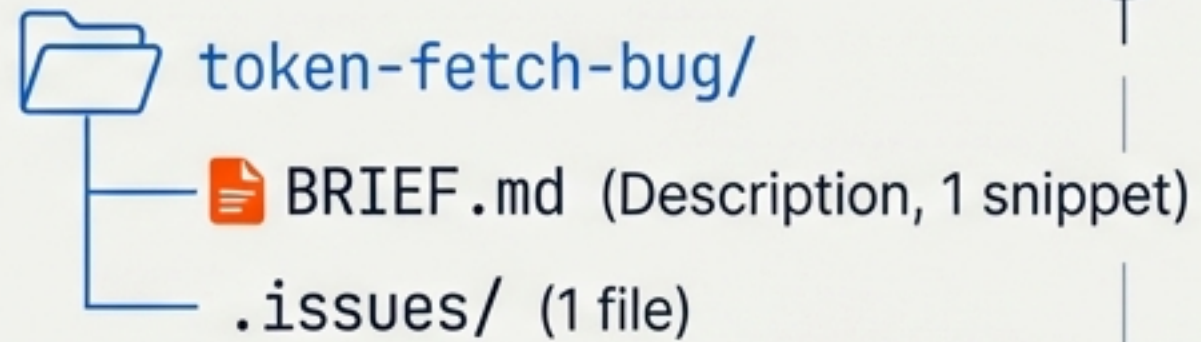

Self-Contained: No external file references.

RULE: Every single pack—no matter how small—lives in its own dedicated folder.

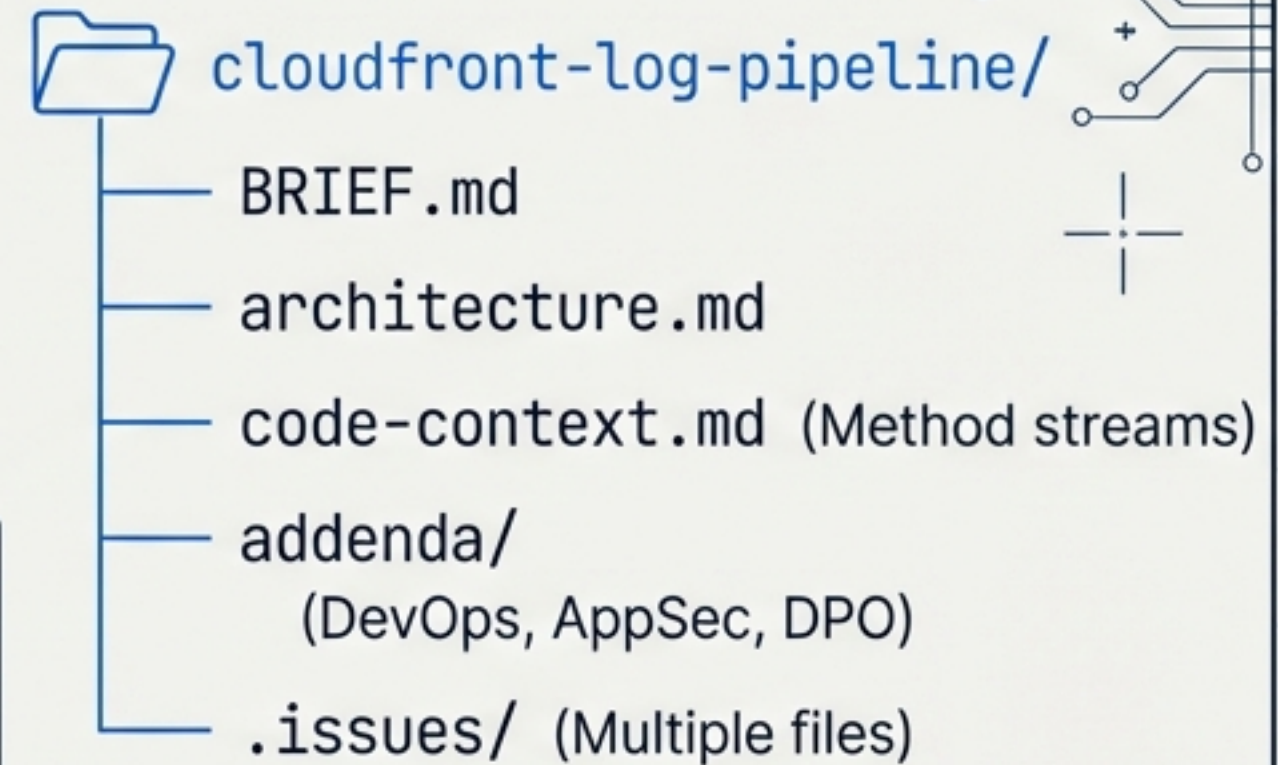

Execution Examples: From Bug to Workstream

THE BUG (Small)

Token fetch slow on admin Lambda.

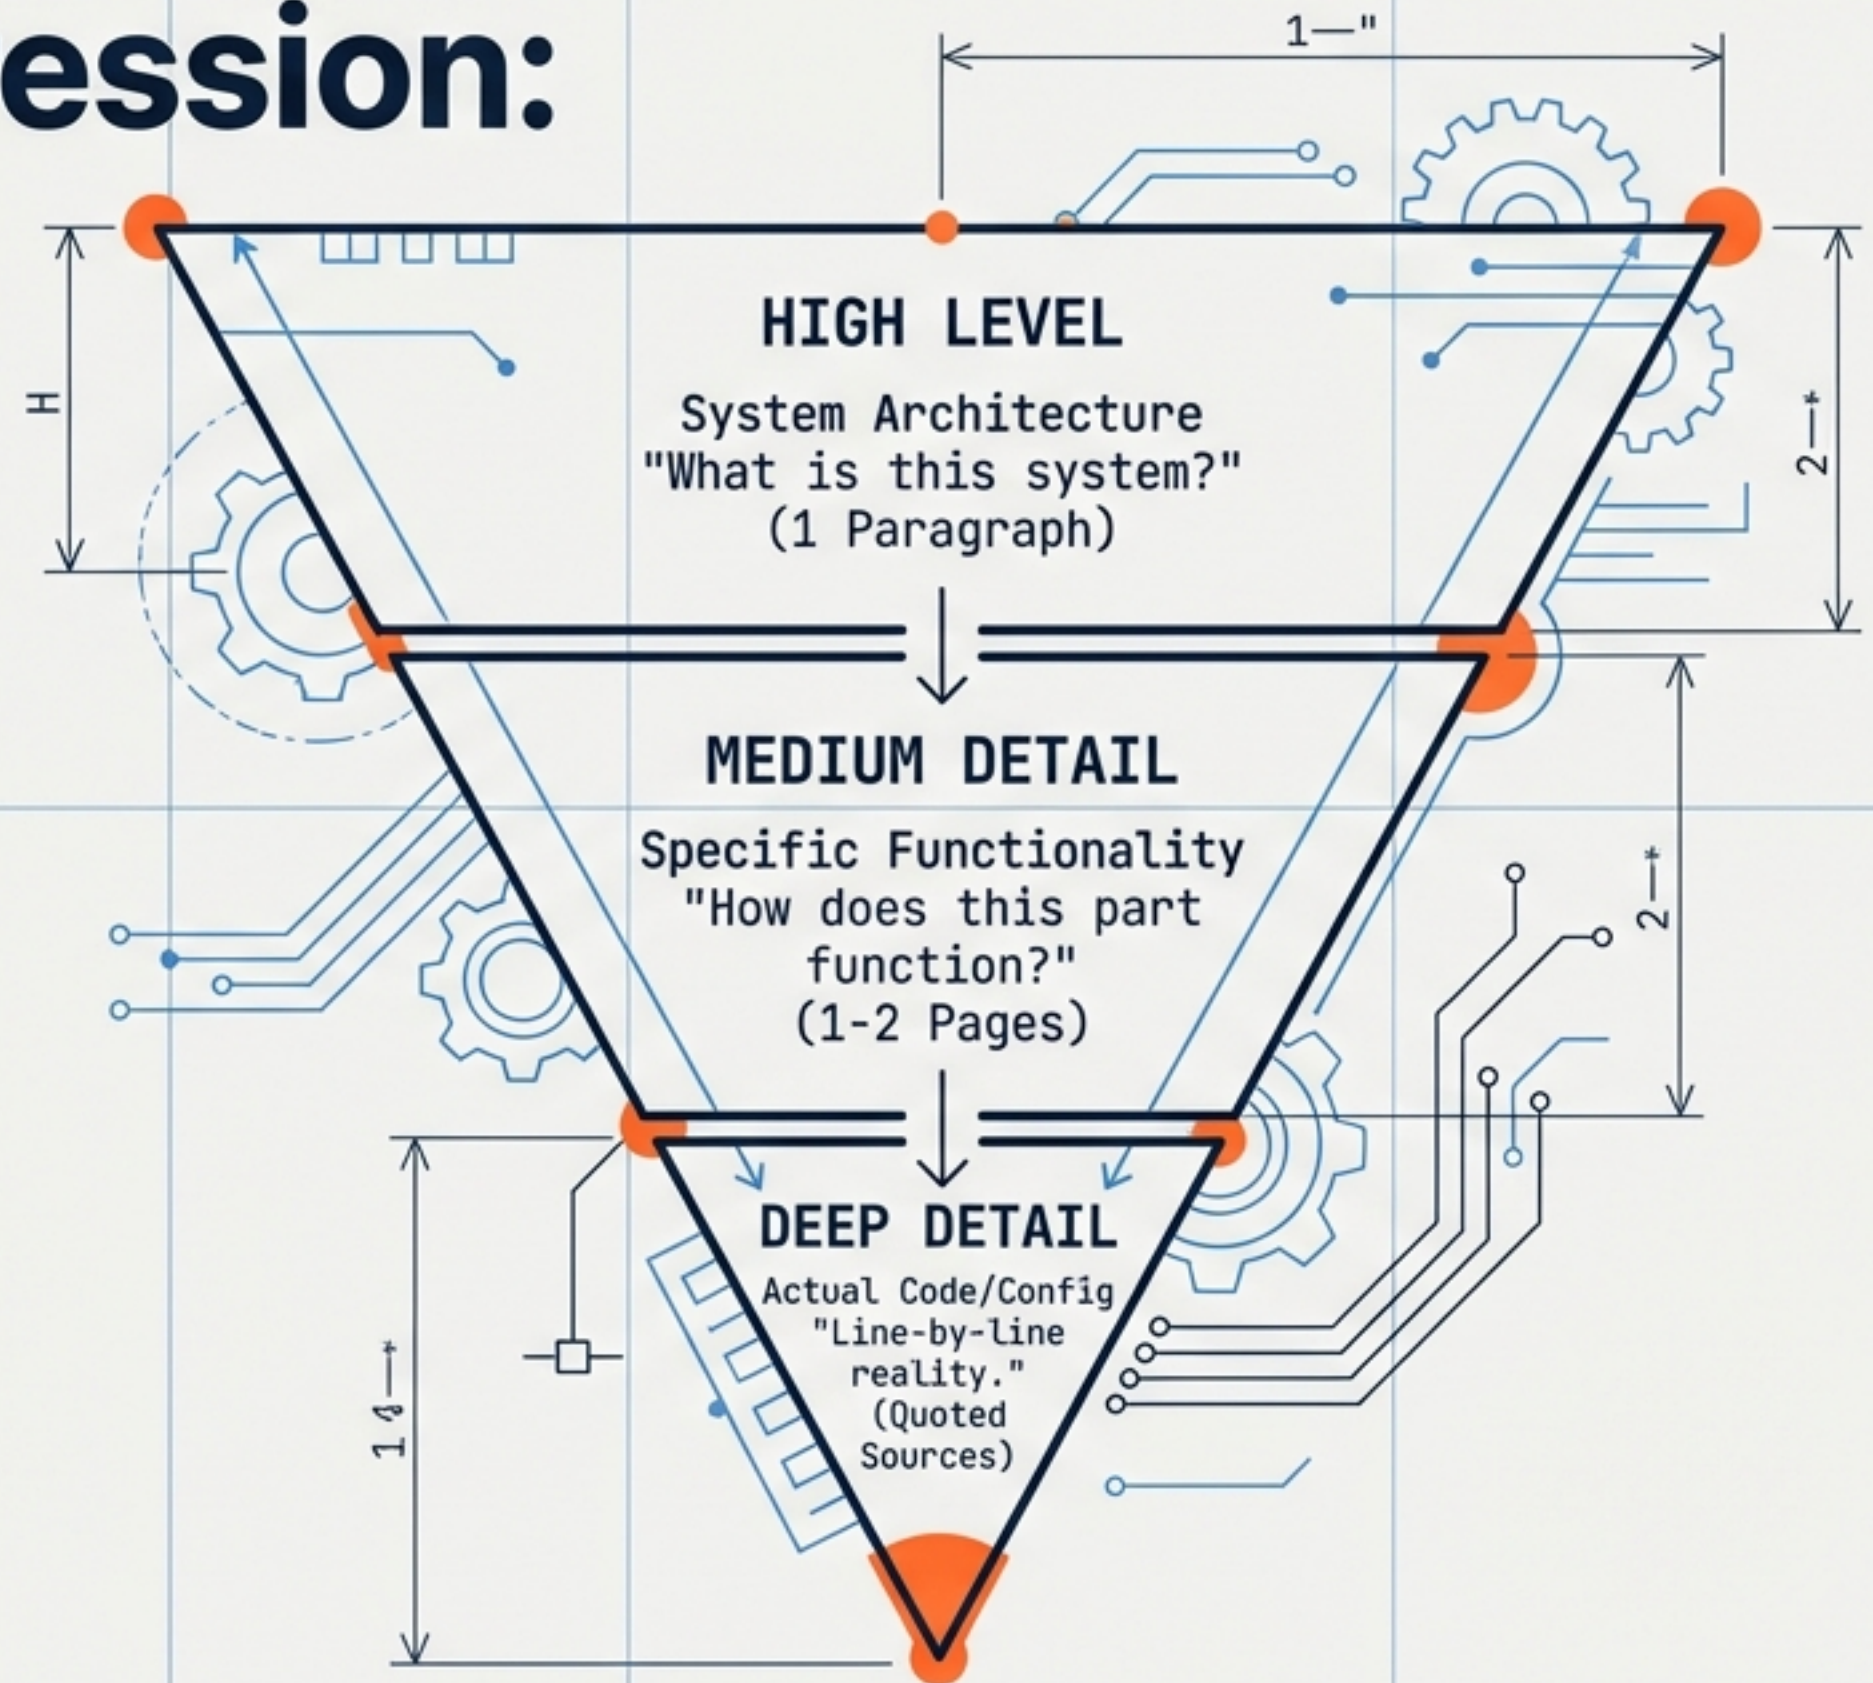

THE WORKSTREAM (Large)

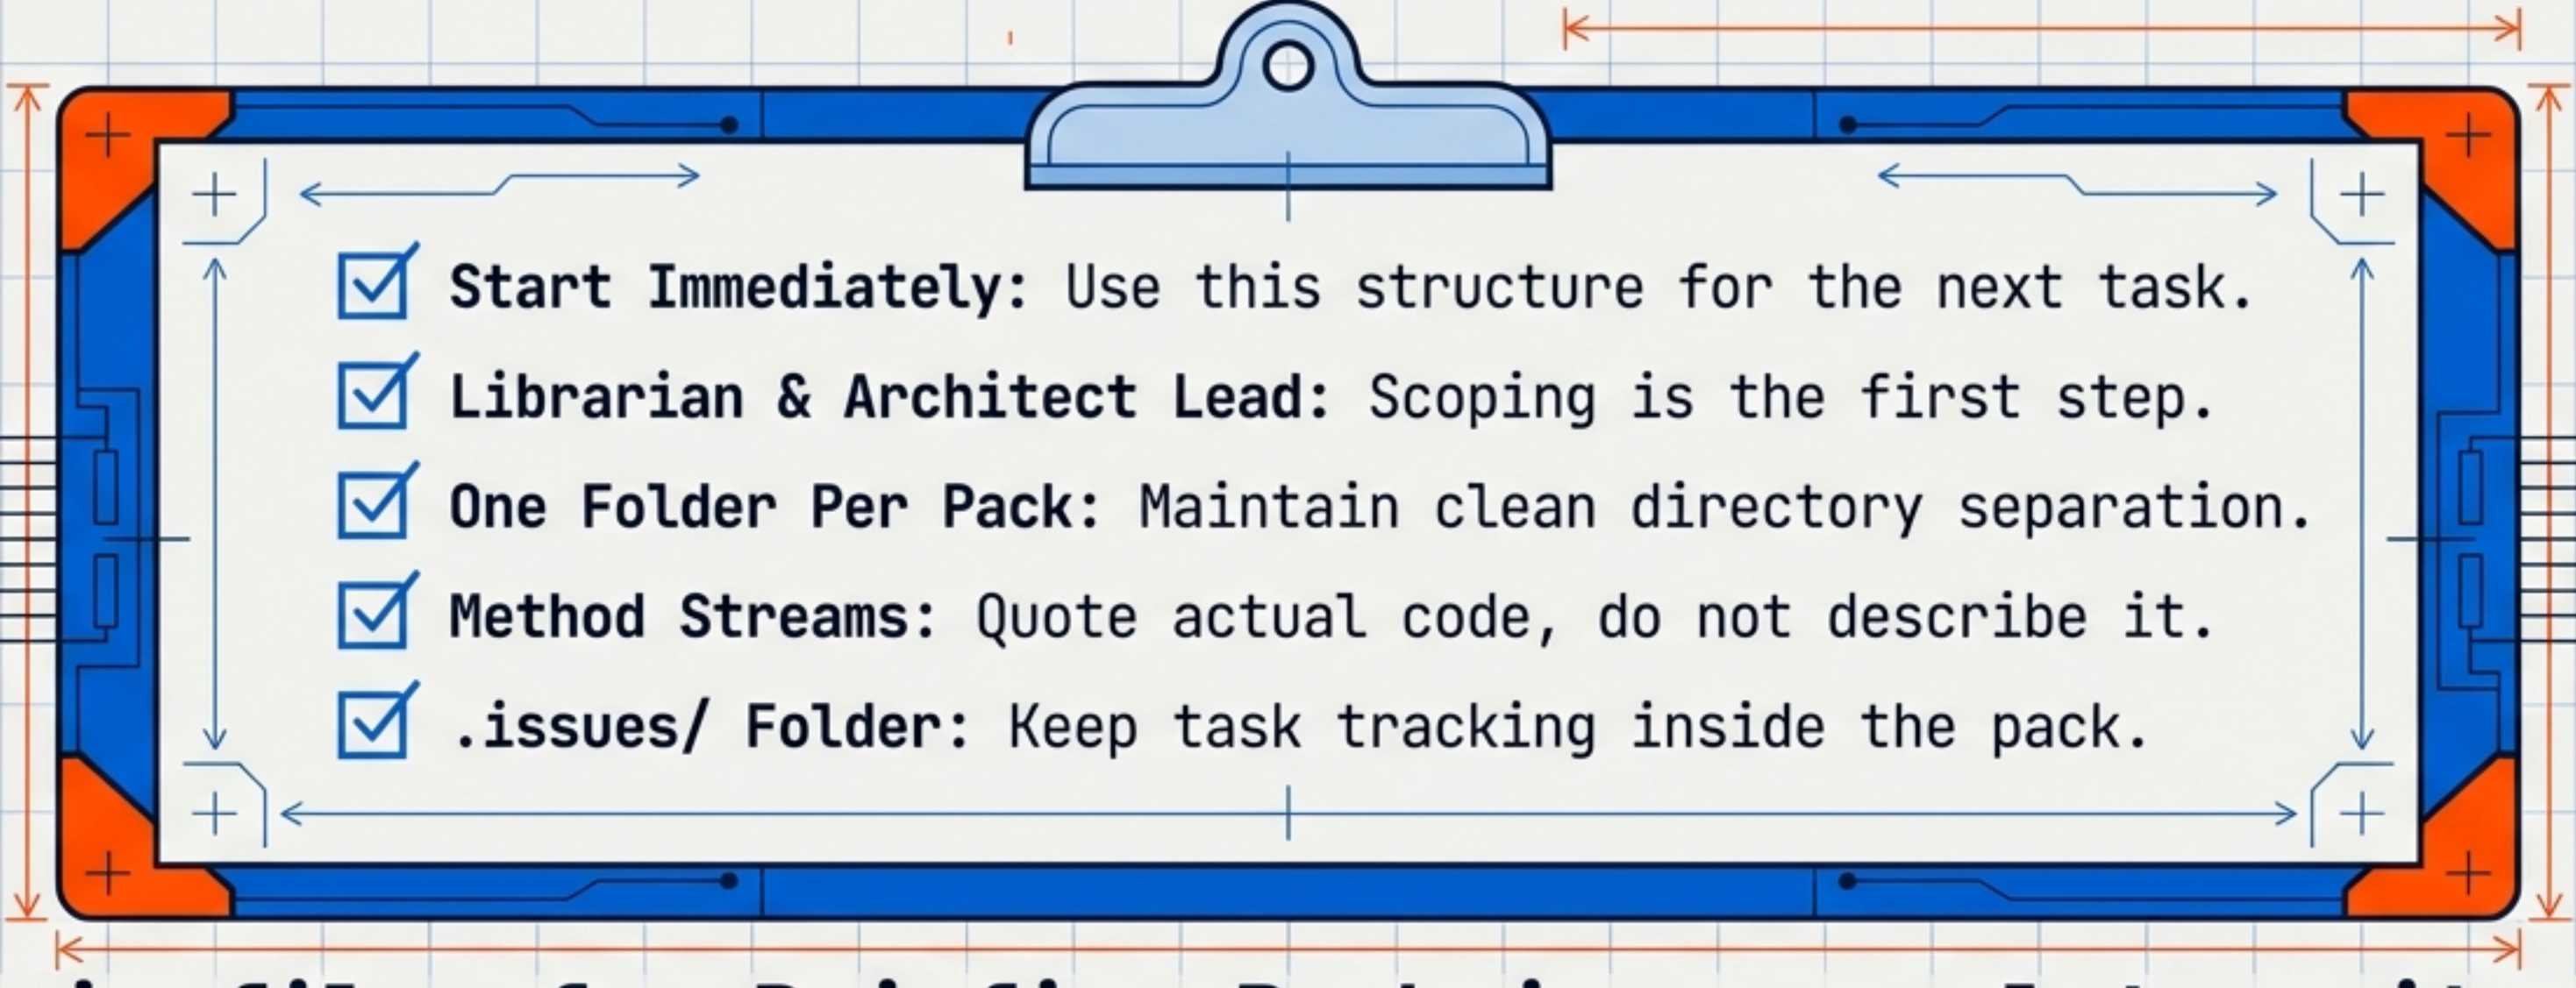

Full pipeline architecture, multiple roles, extensive code.

Knowledge Compression: Zooming In

The agent reads top-to-bottom.
Include what is needed; point
to where more lives.

Implementation Manifesto

- 
- ✓ **Start Immediately:** Use this structure for the next task.
 - ✓ **Librarian & Architect Lead:** Scoping is the first step.
 - ✓ **One Folder Per Pack:** Maintain clean directory separation.
 - ✓ **Method Streams:** Quote actual code, do not describe it.
 - ✓ **.issues/ Folder:** Keep task tracking inside the pack.

A zip file of a Briefing Pack is a complete unit of work. Drop it into any context window to drive fulfillment, engagement, and accuracy.
