

Villager Team Daily Brief

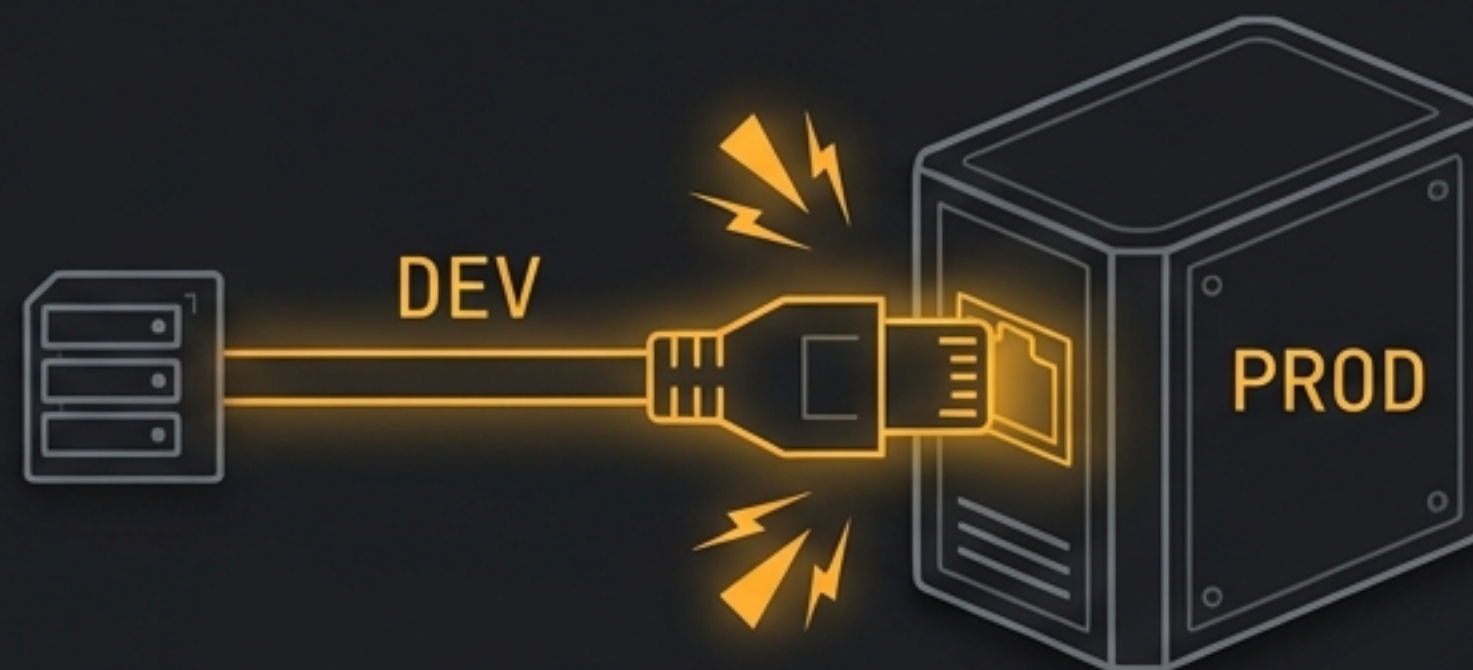

From MVP to Managed Ecosystem:
The Productisation Phase

The Mandate: Productise Properly

MVP Status: Functional

- ✓ Design guidelines applied
- ✓ End-to-end flow operational
- ✓ Real utility verified

Infrastructure Risk

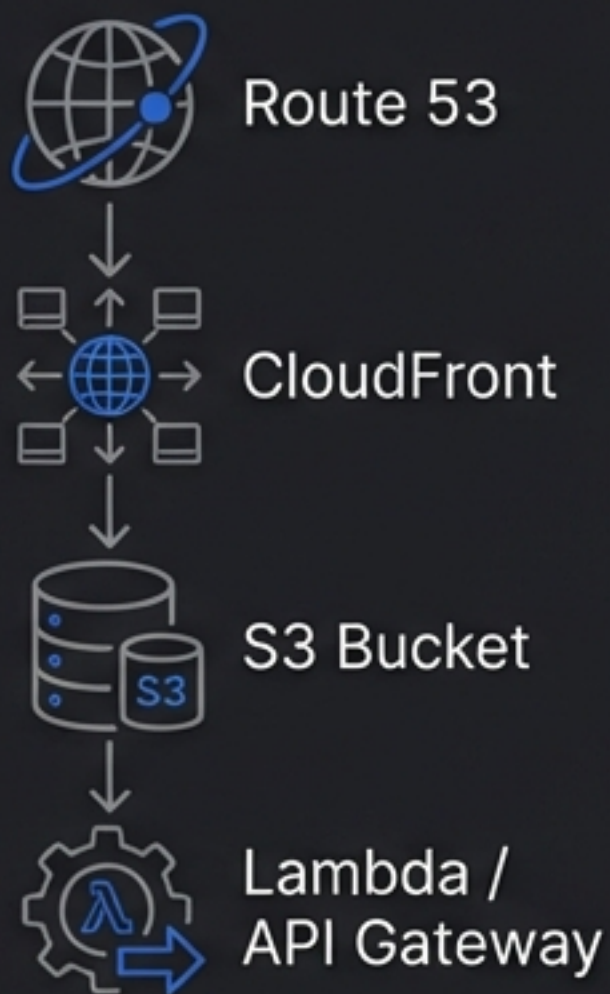

Critical Risk: Development wired to Production.

Objective: Build infrastructure, discipline, and observability for scalable public beta.

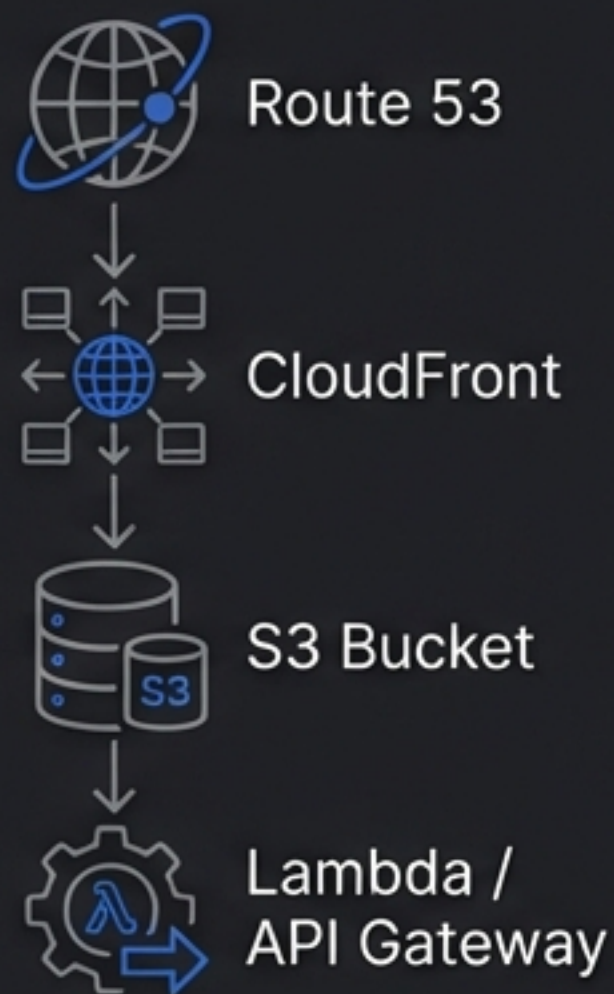

Production Environment Architecture

Principle: Isolation is Safety.

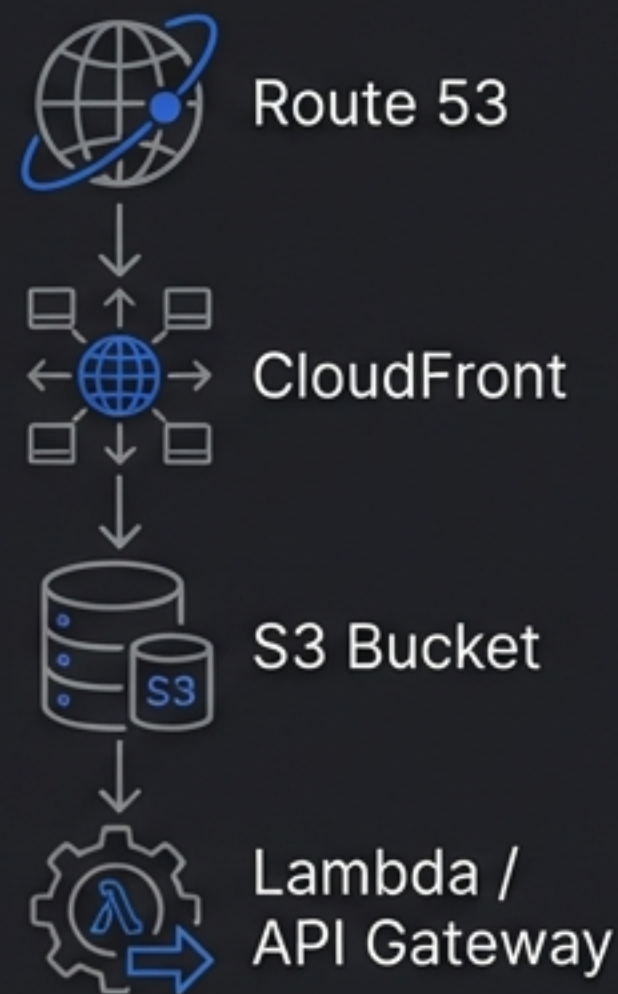

Development (Dev)

Quasi-Prod (Stage)

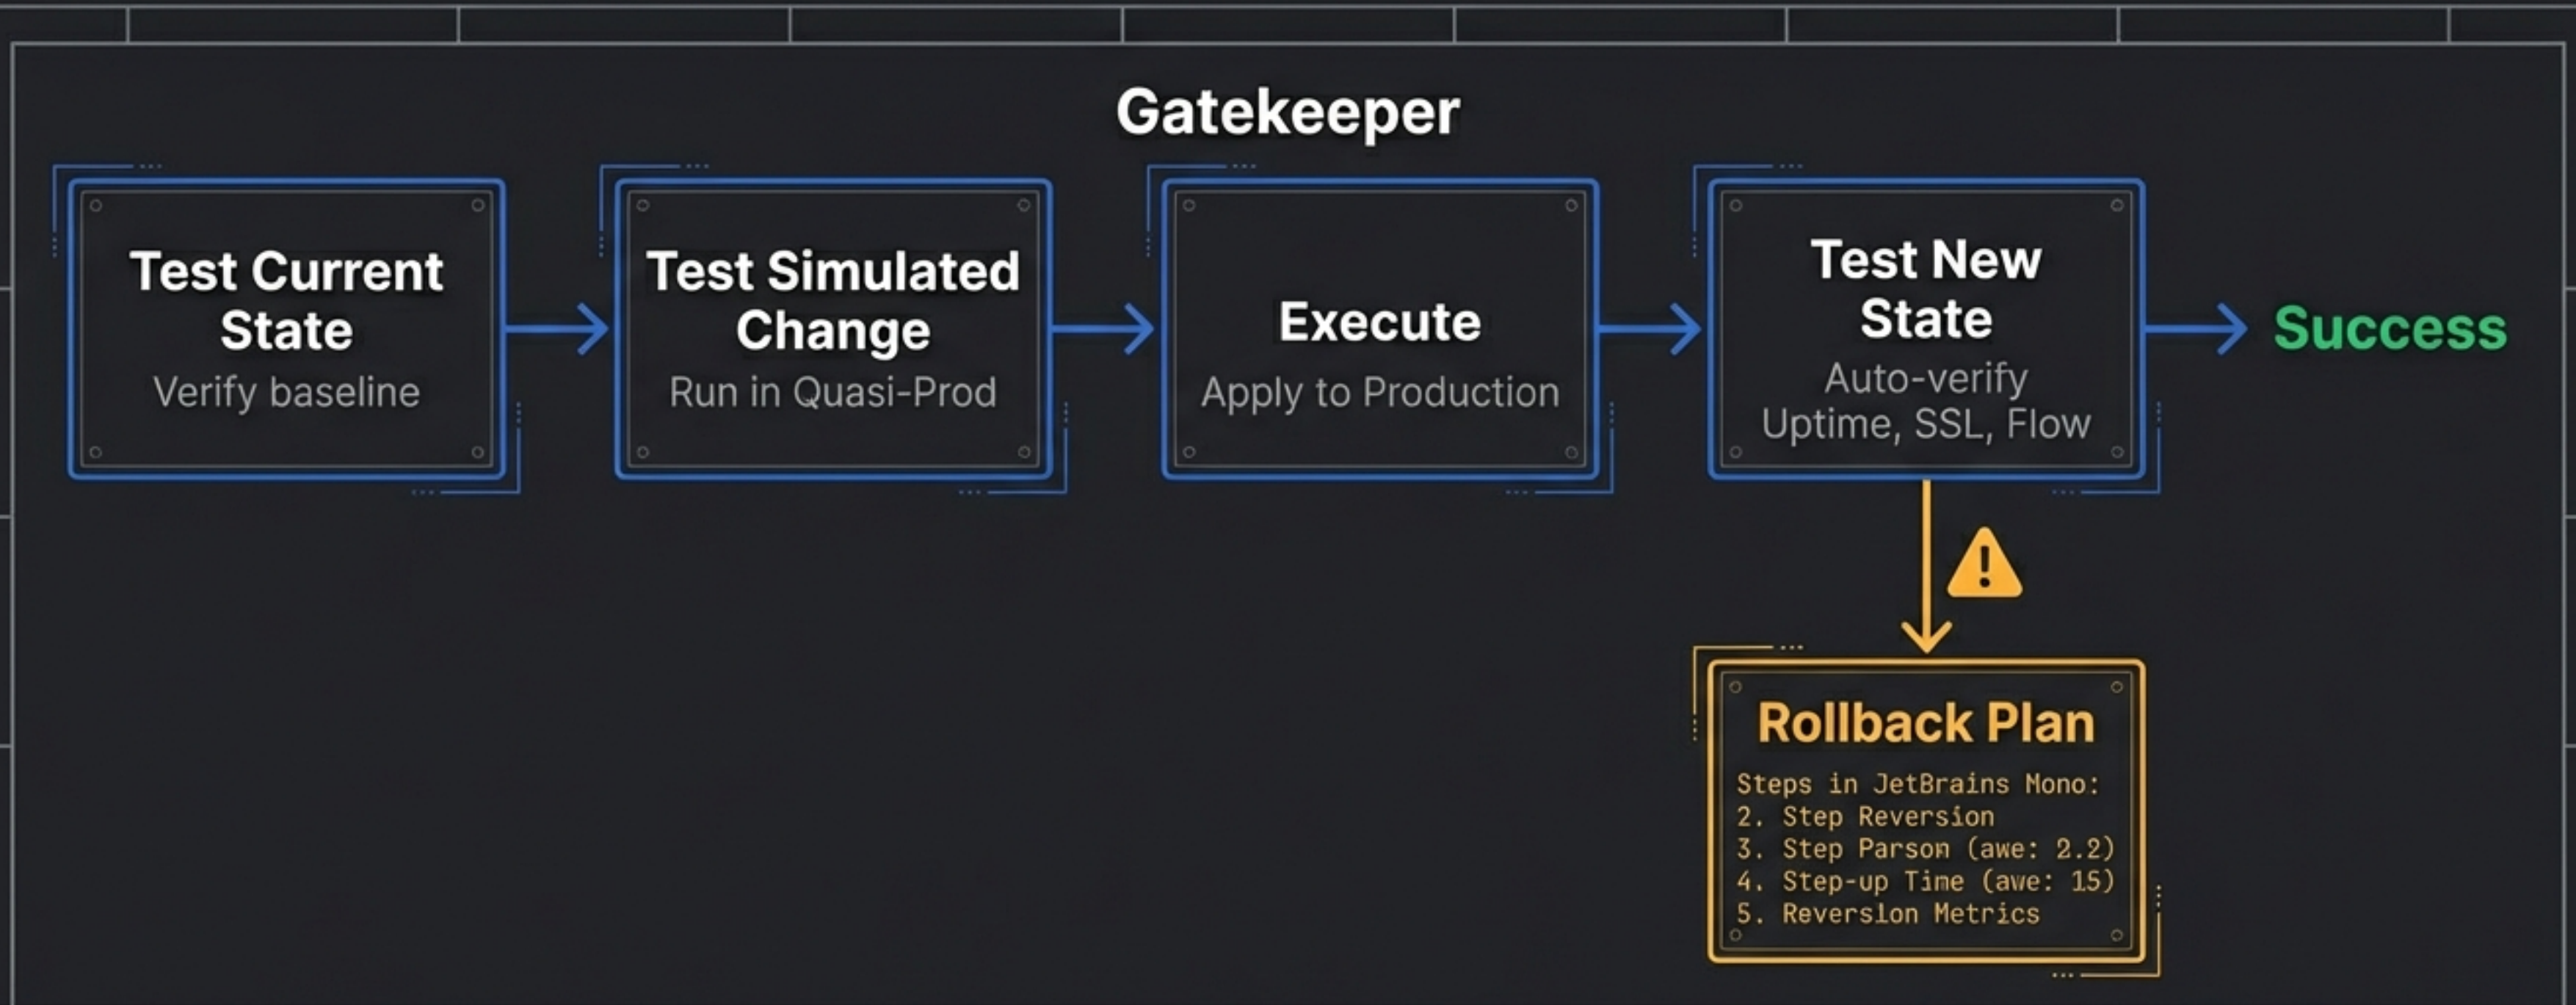

Production (Live)

The Mapping: Master document required detailing configs for every environment. Eliminates 'works on my machine' risk.

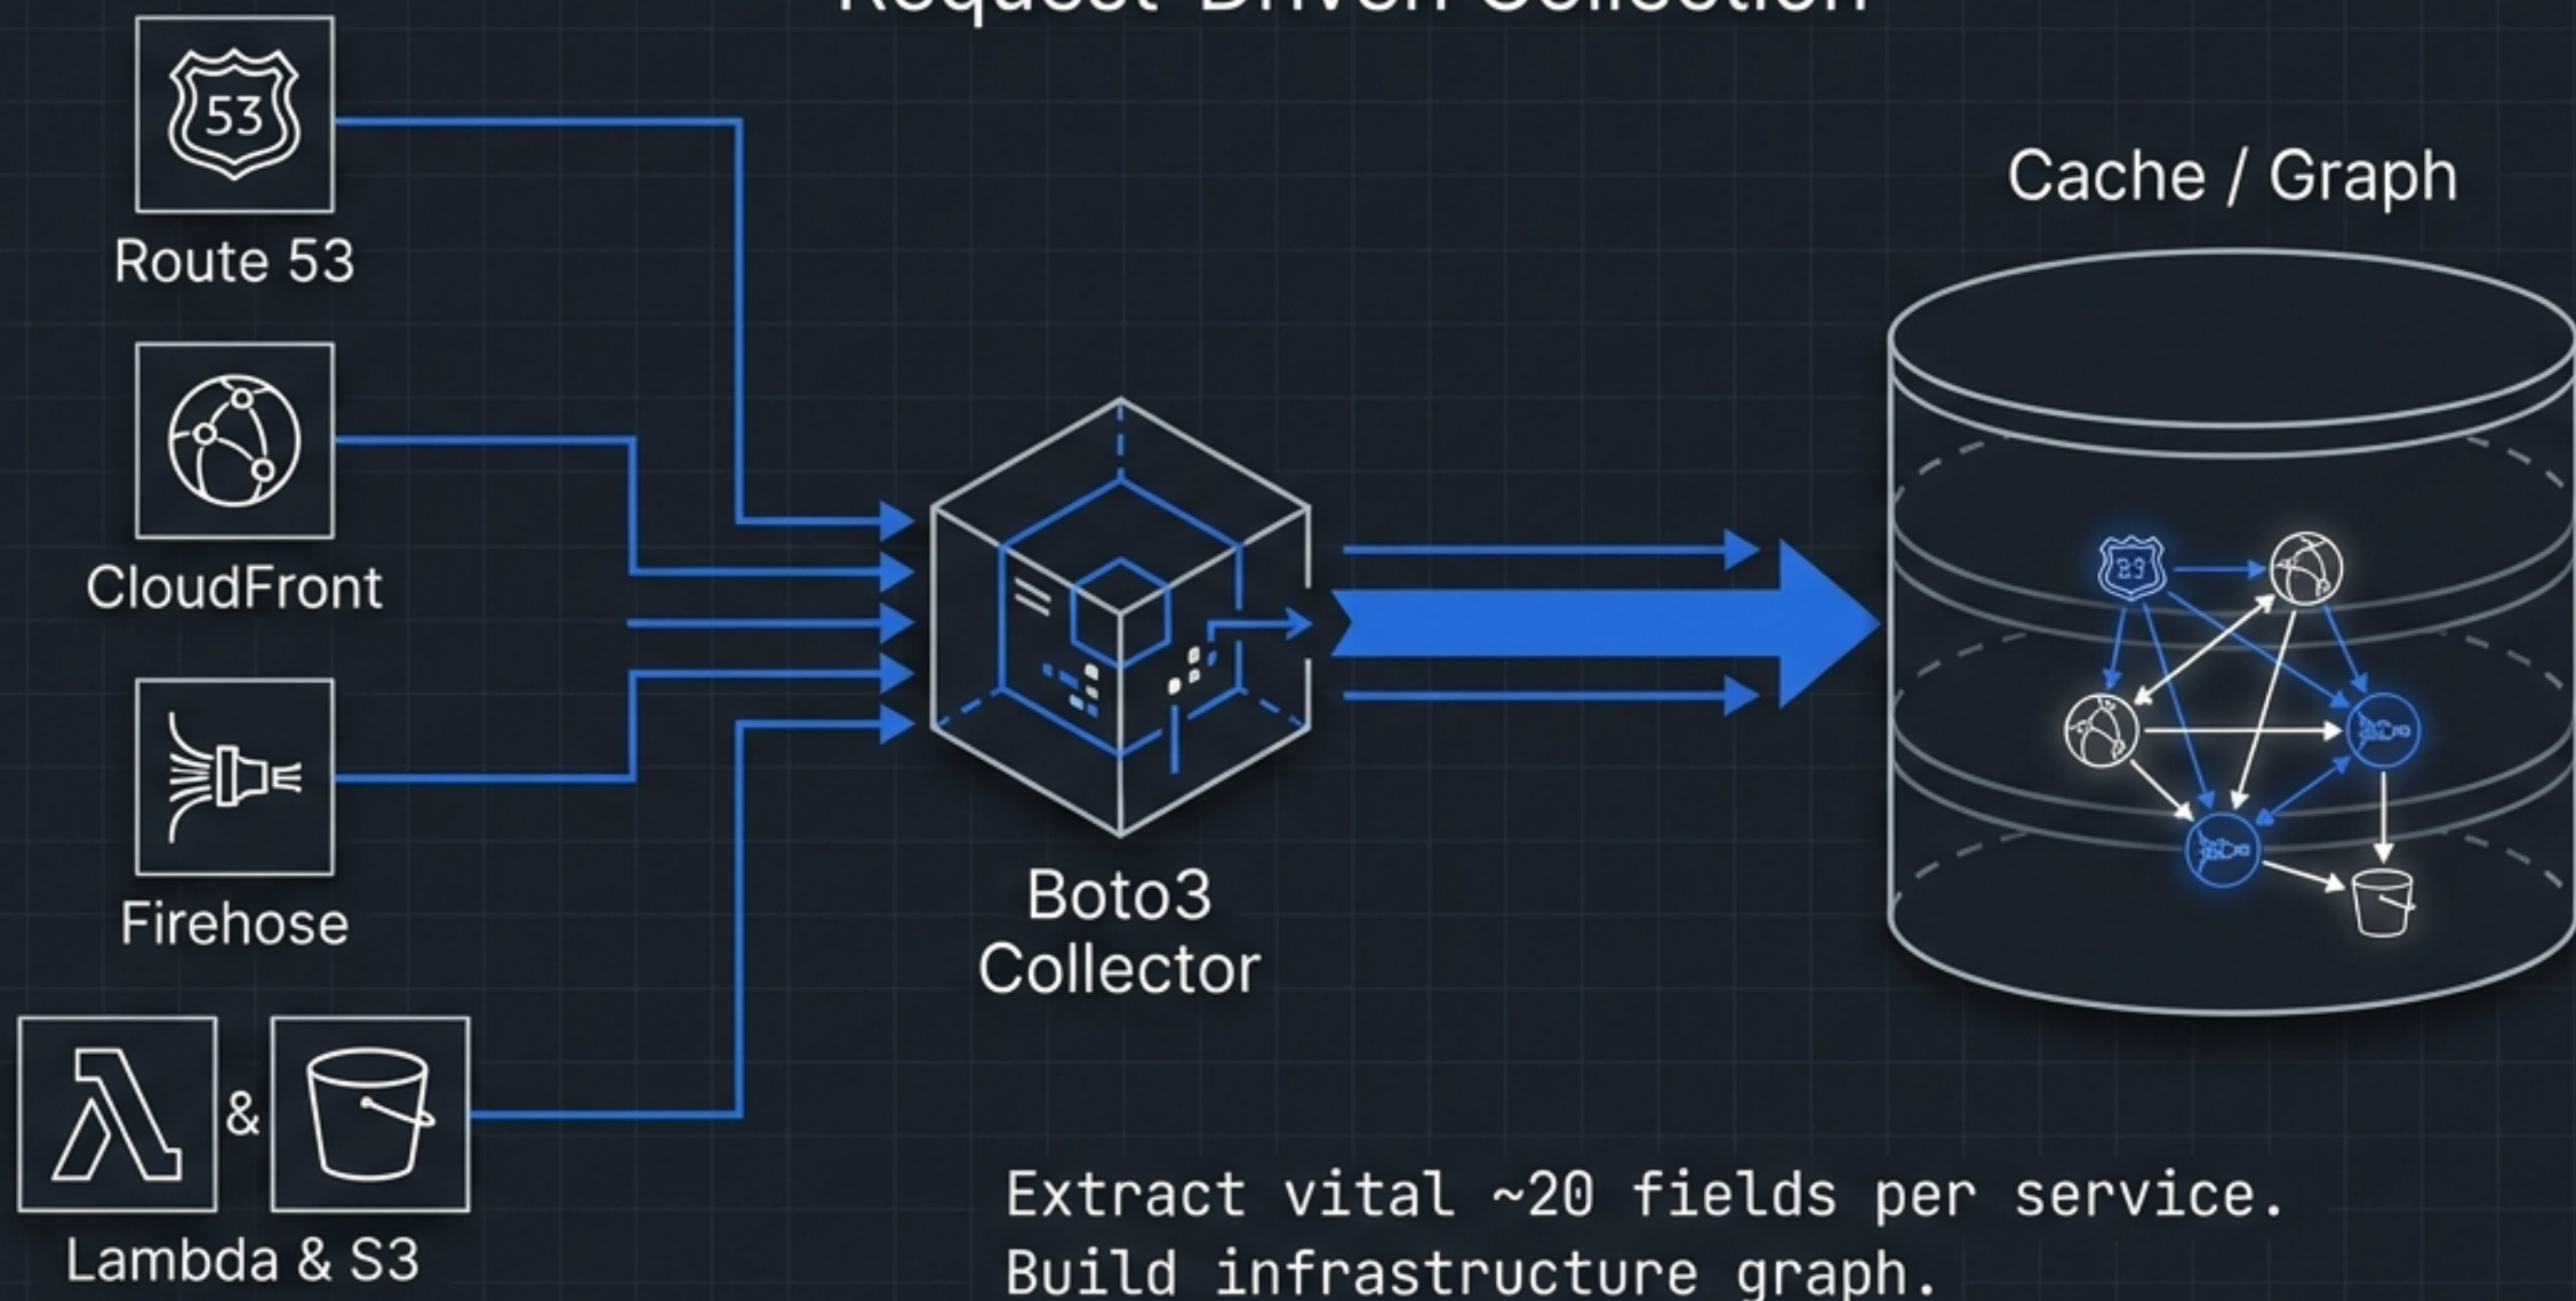

The Production Discipline

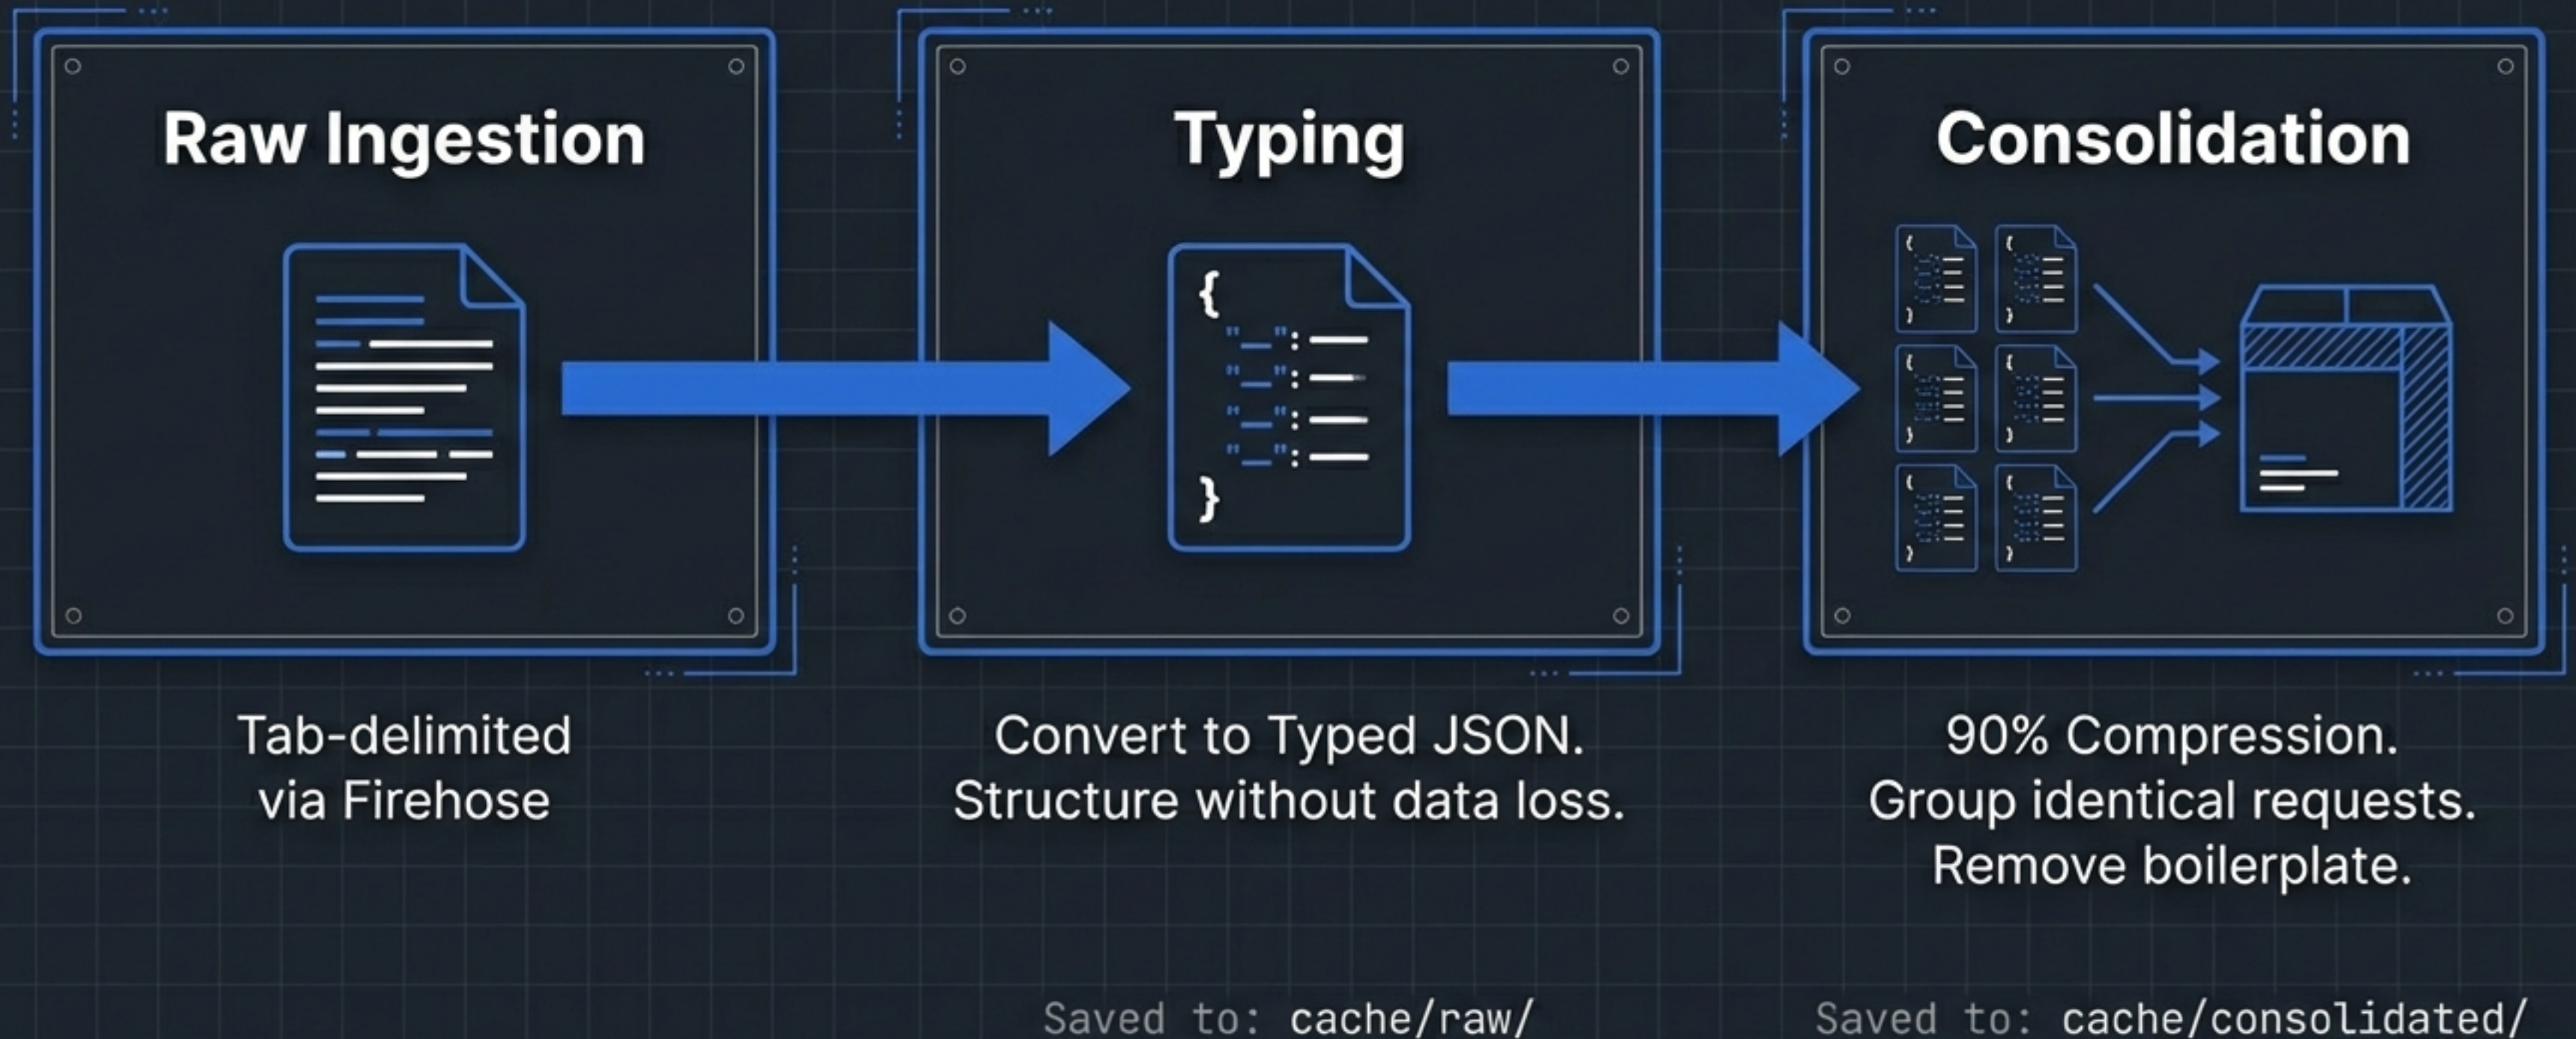

Risk Assessment: CISO + AppSec review required for blast radius on every production touch.

The Digital Twin: Knowing Ourselves

Request-Driven Collection

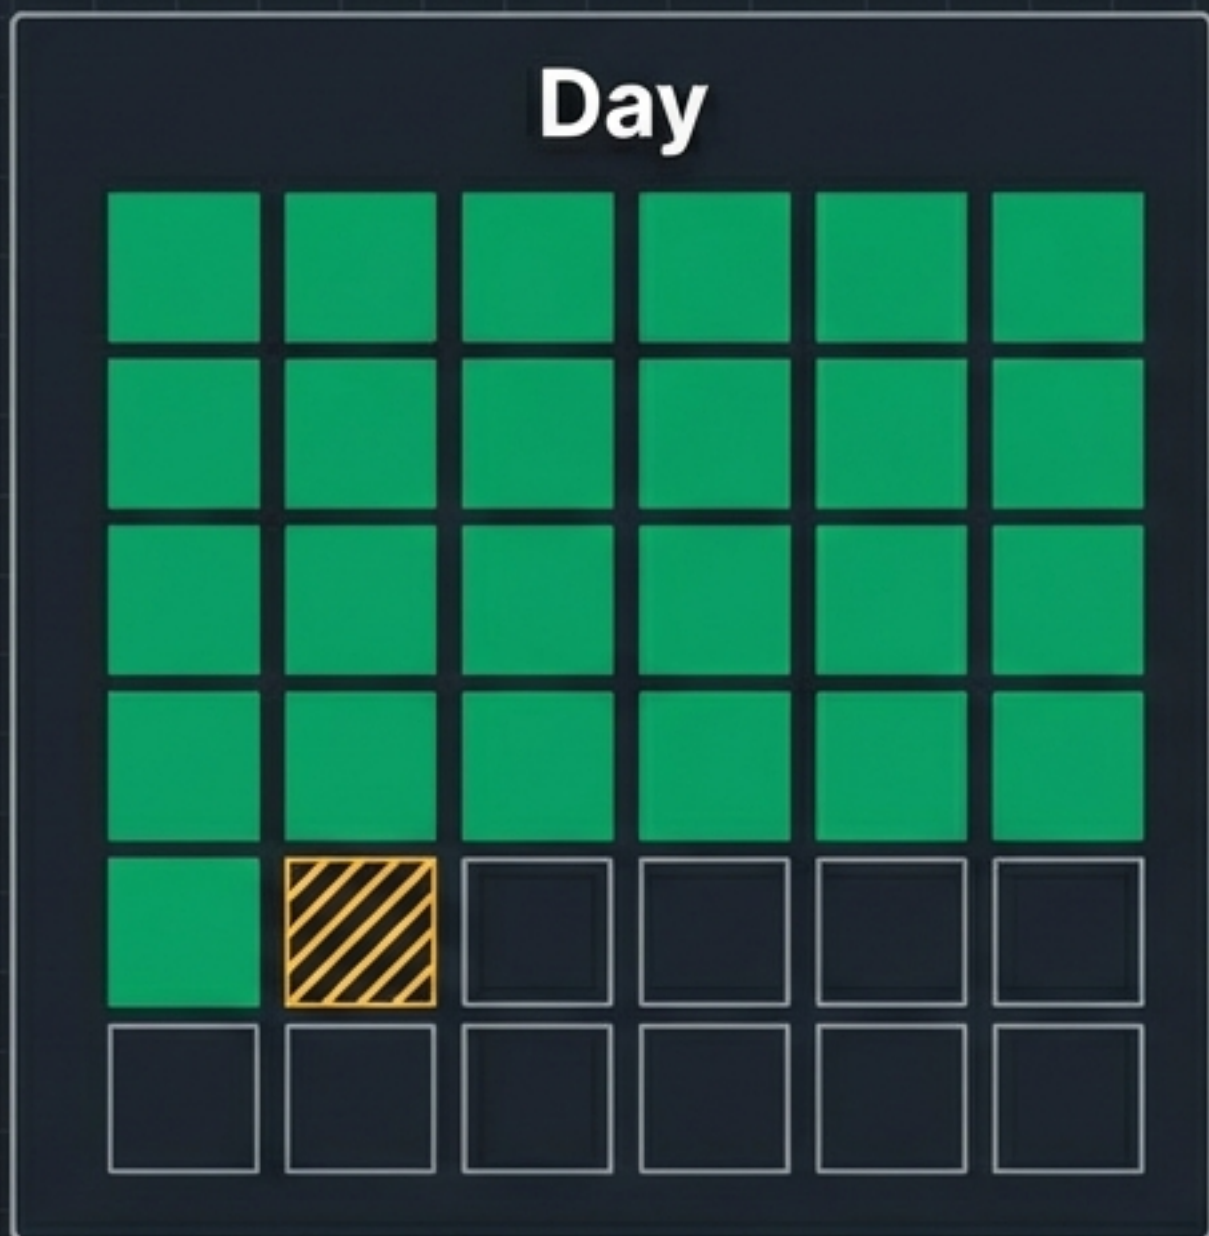

The LETS Pipeline: Turning Logs into Insight

Temporal Aggregation & Finality

Calculate once, cache forever.

Partial (Active)

Final (Immutable)

Finality Concept:

- **Partial**: Period active.
Recalculate on request.
- **Final**: Period closed.
Compute once, store forever.

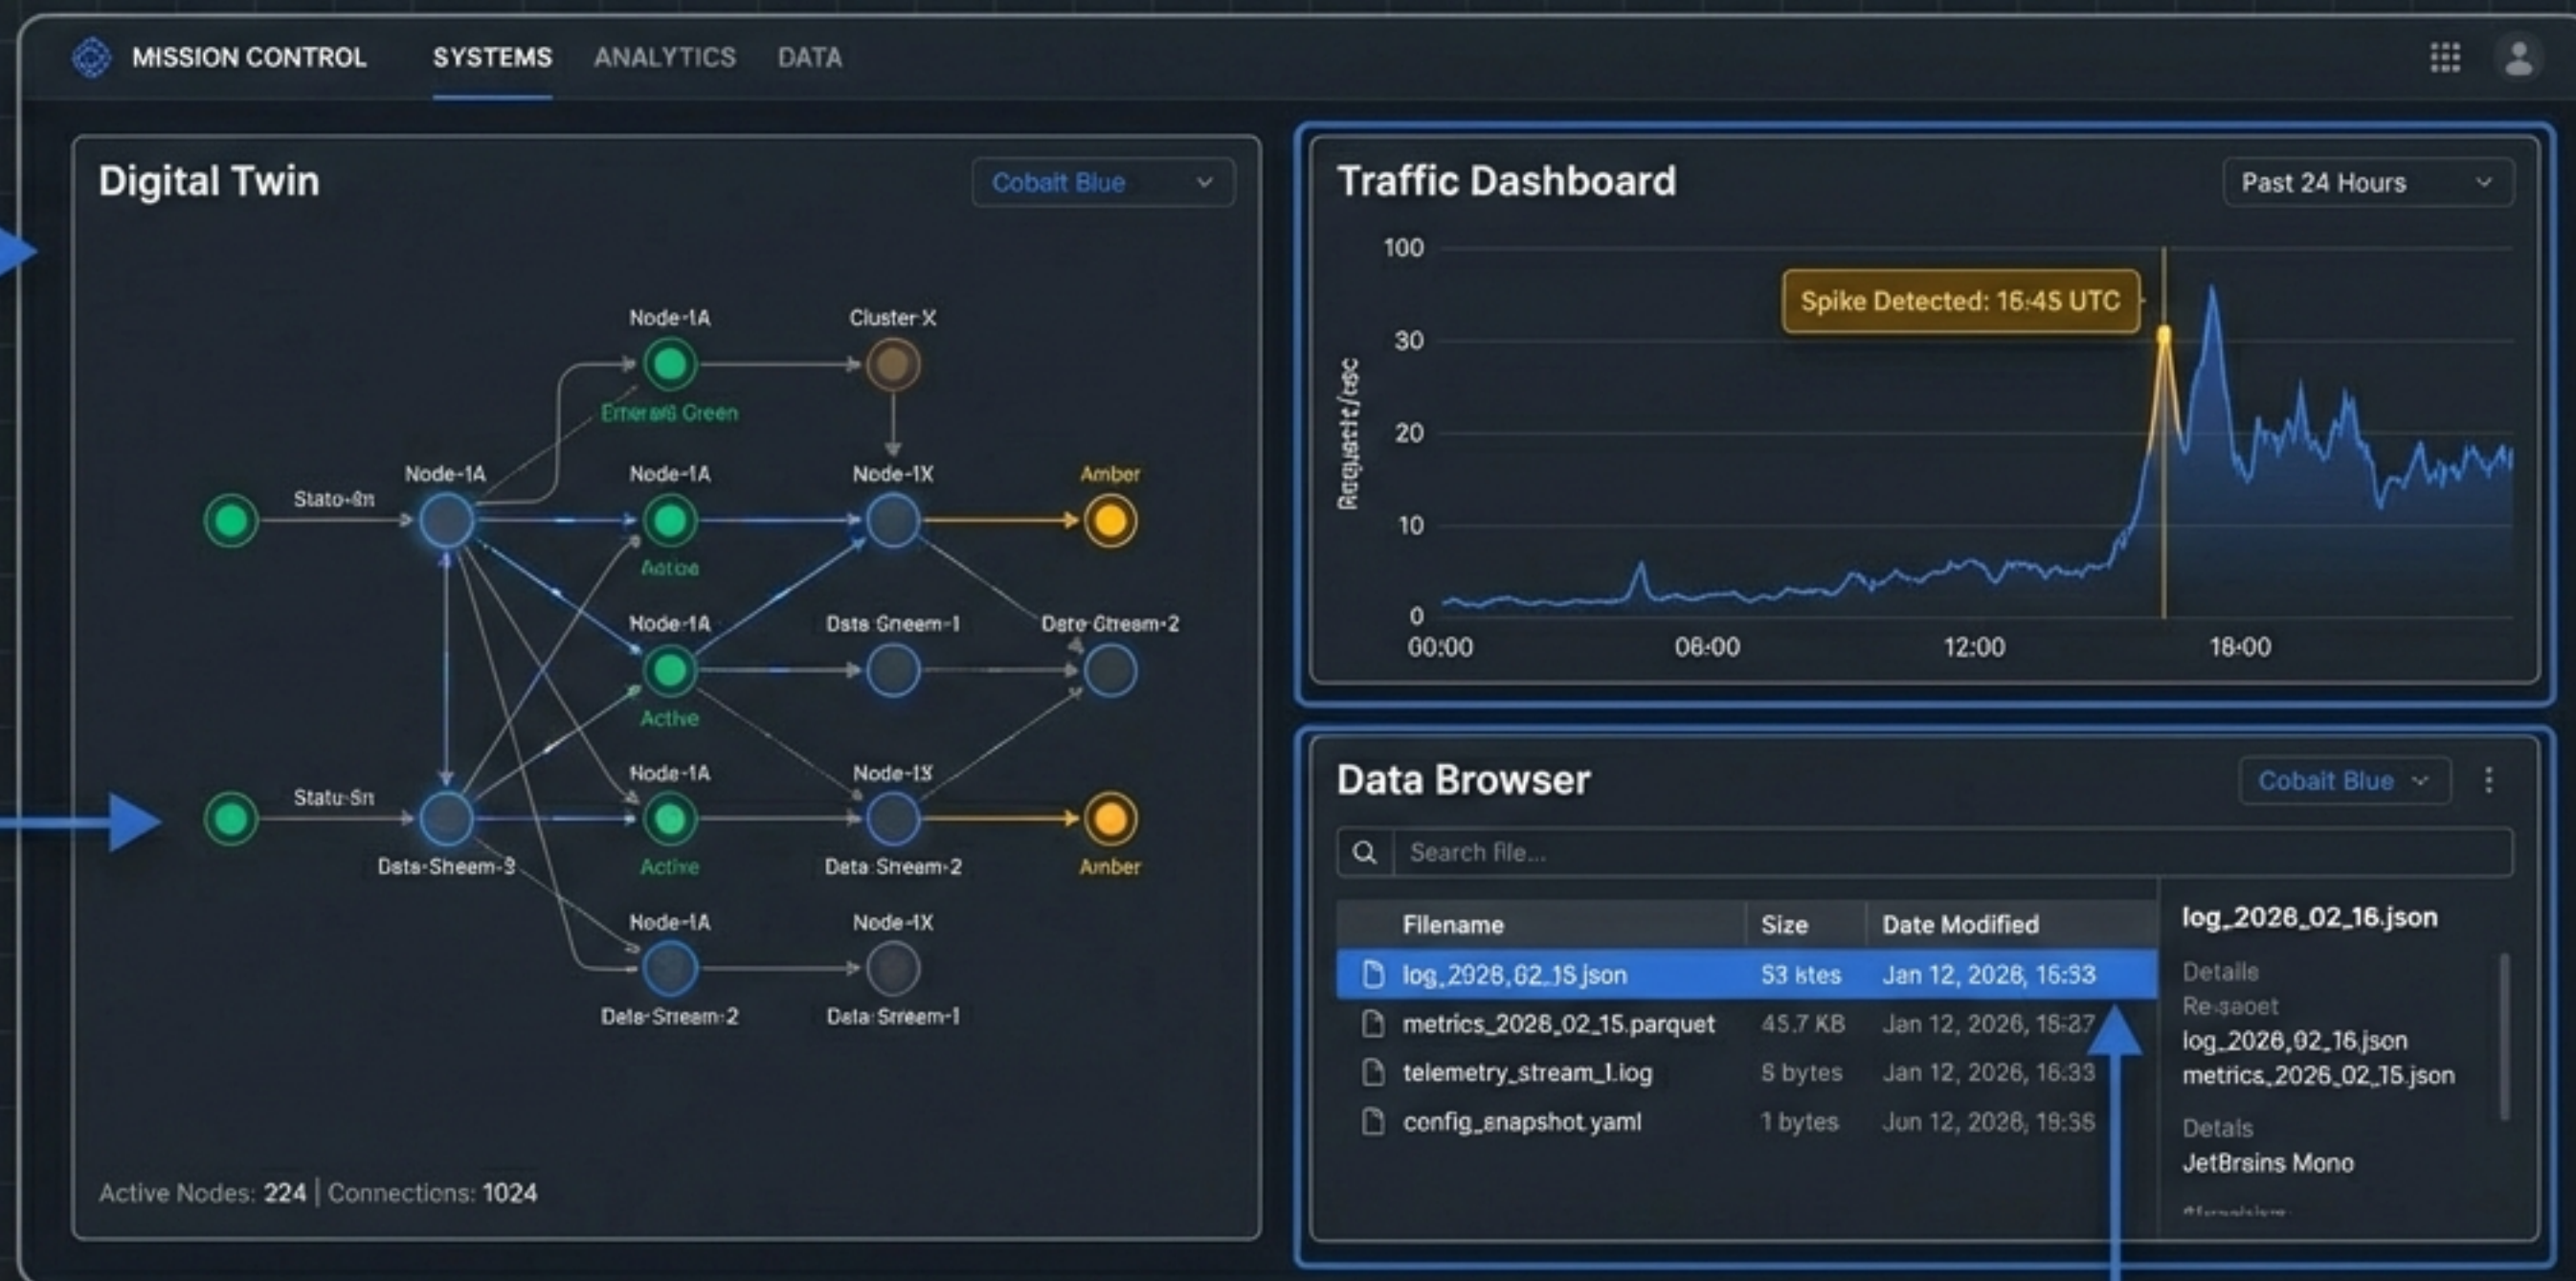

Optimisation:

A Day = Sum of 24 Final Hours.
Only compute the missing time.

The Admin UI: Visualising the Ecosystem

SPA with
path-based
routing

Independent web
components

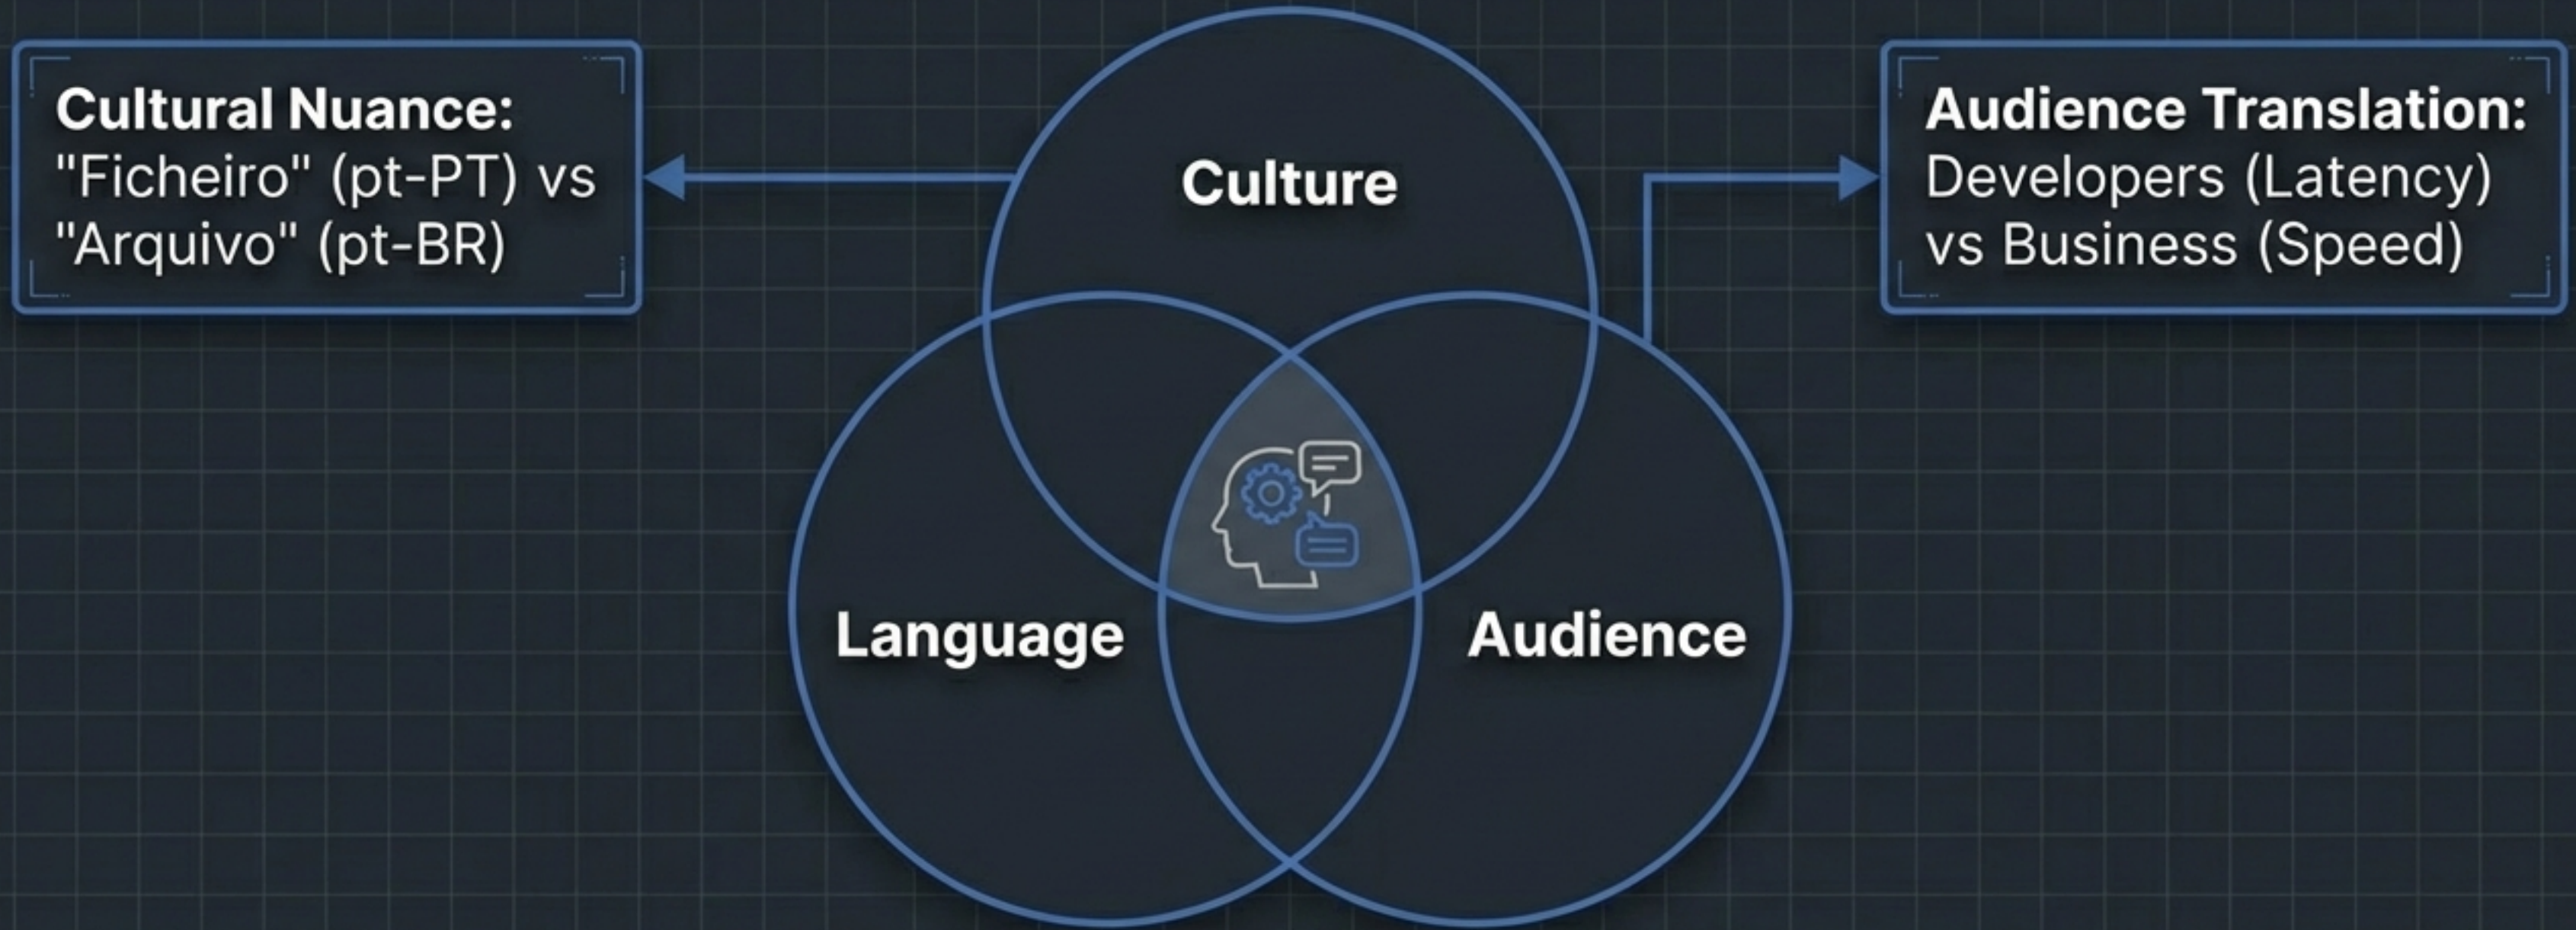

Navigate from aggregated stats to raw JSON

Automated Intelligence: Journalist & Historian

Daily Trigger → API Call → Publish → Notify Team

New Role: The Translator

The Workflow

LLM Drafts (90%) → Human Native Speaker Review (10%) → Production

The Global Strategy

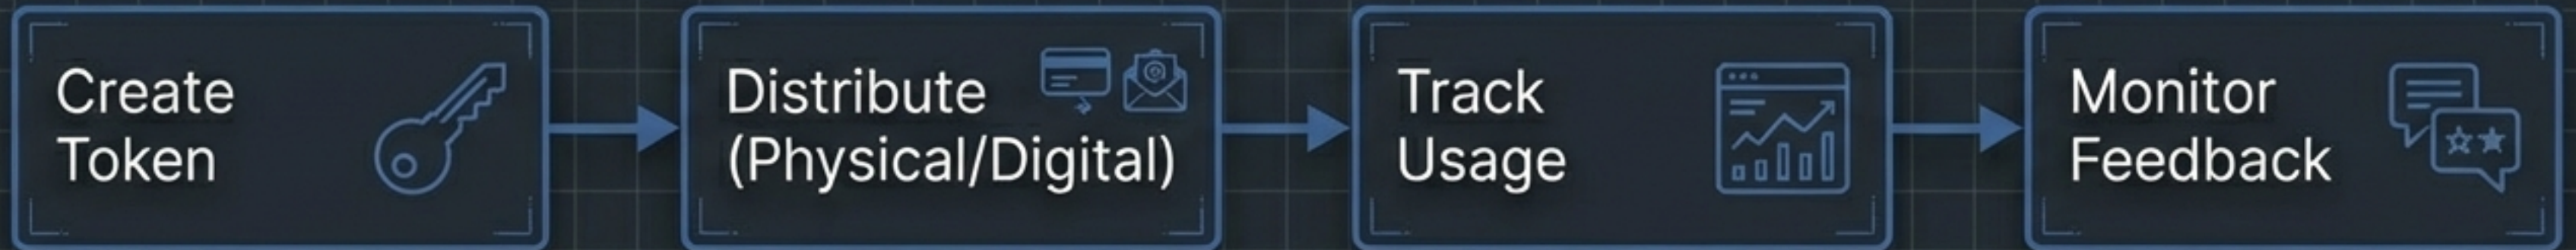

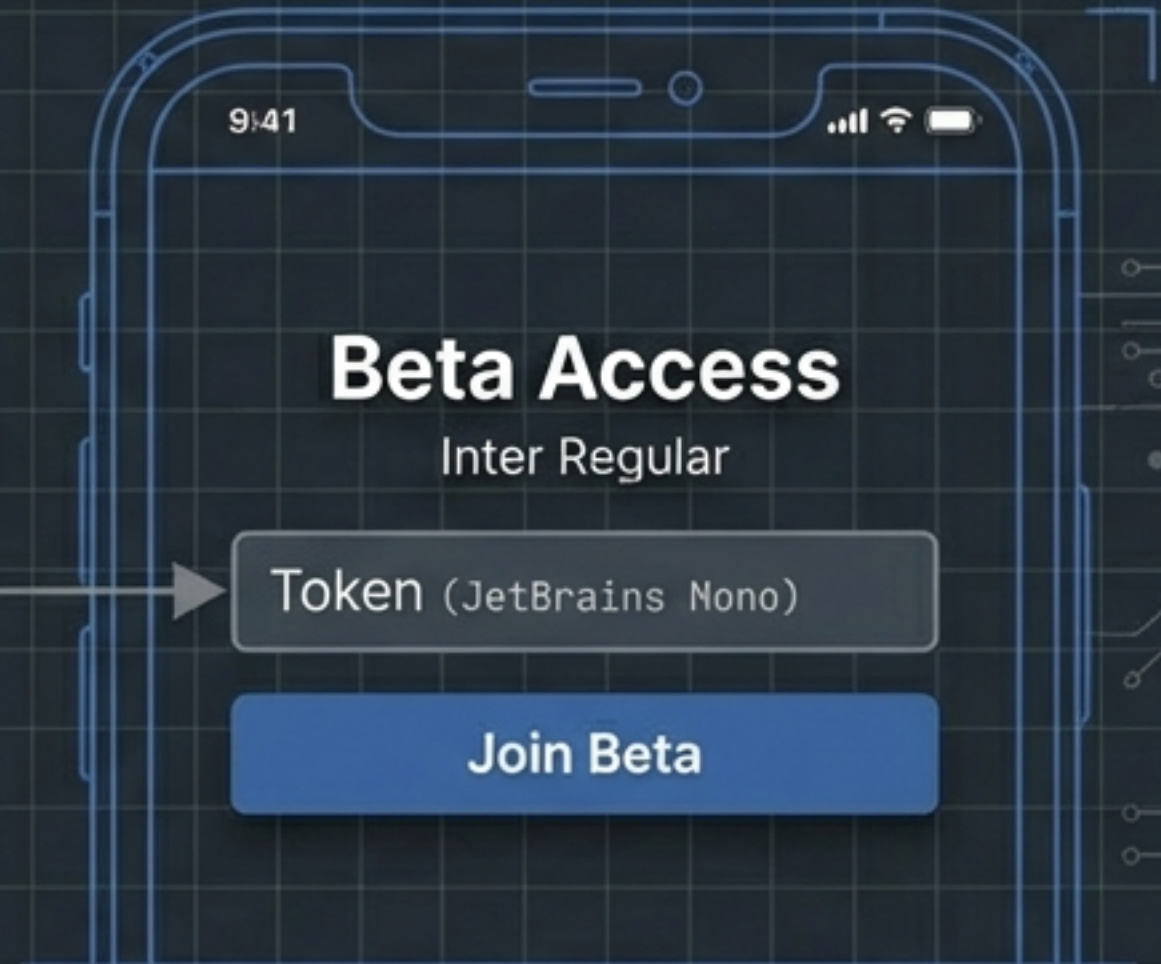

Hypothesis: English markets are saturated. Culturally native tools win in underserved markets.

Enterprise Play: Multi-entity translation profiles allowing acquired companies to keep brand voice.

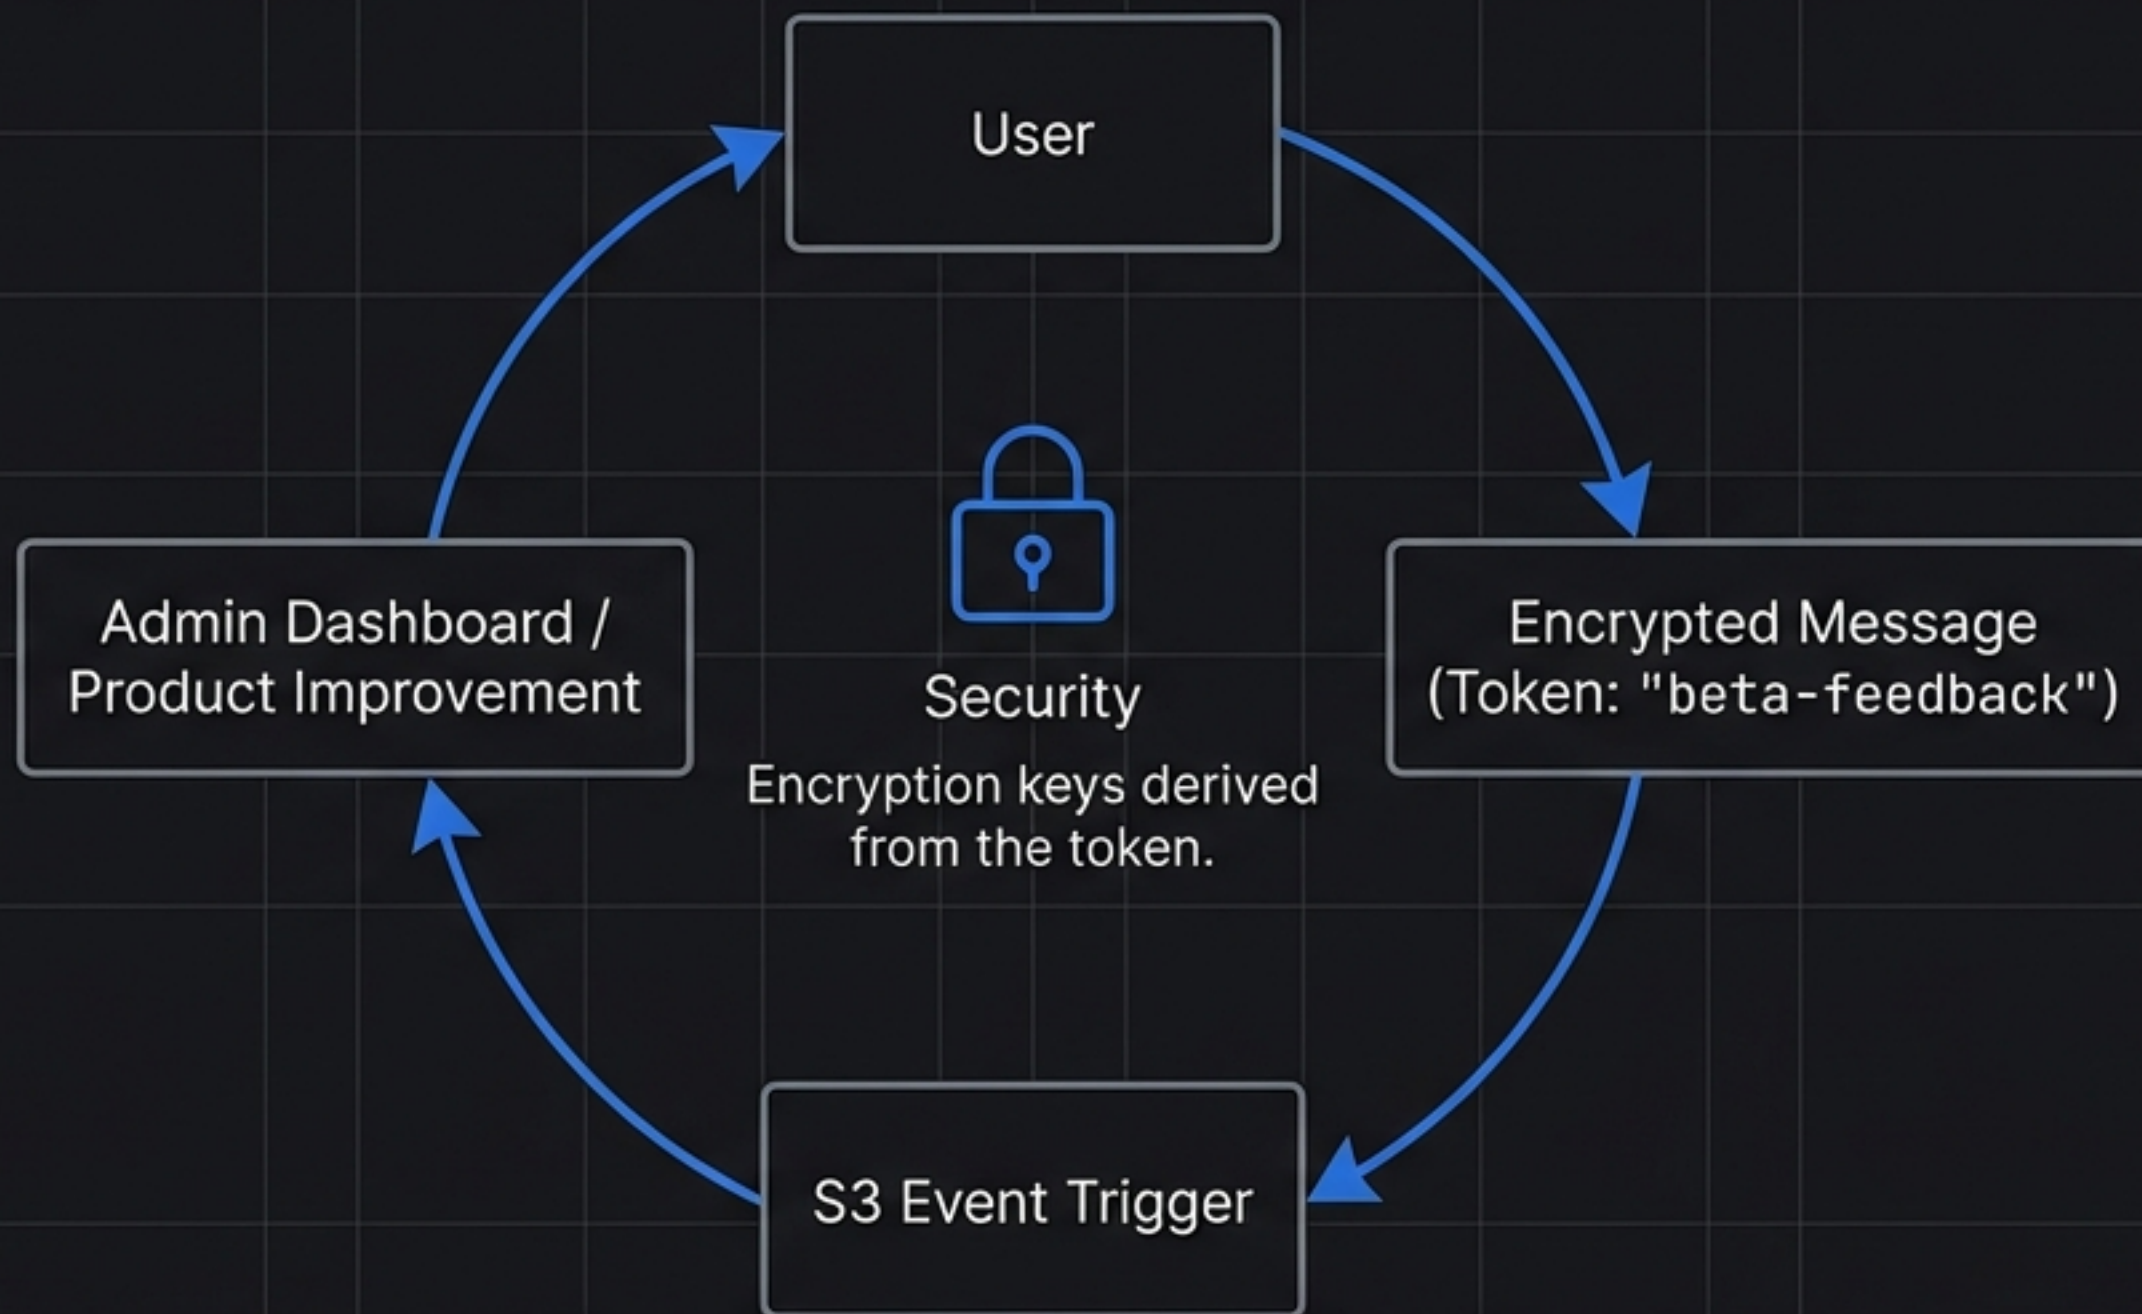

Immediate Action: Audit site for untranslated English (**Bug**).

User Acquisition: The Beta Programme

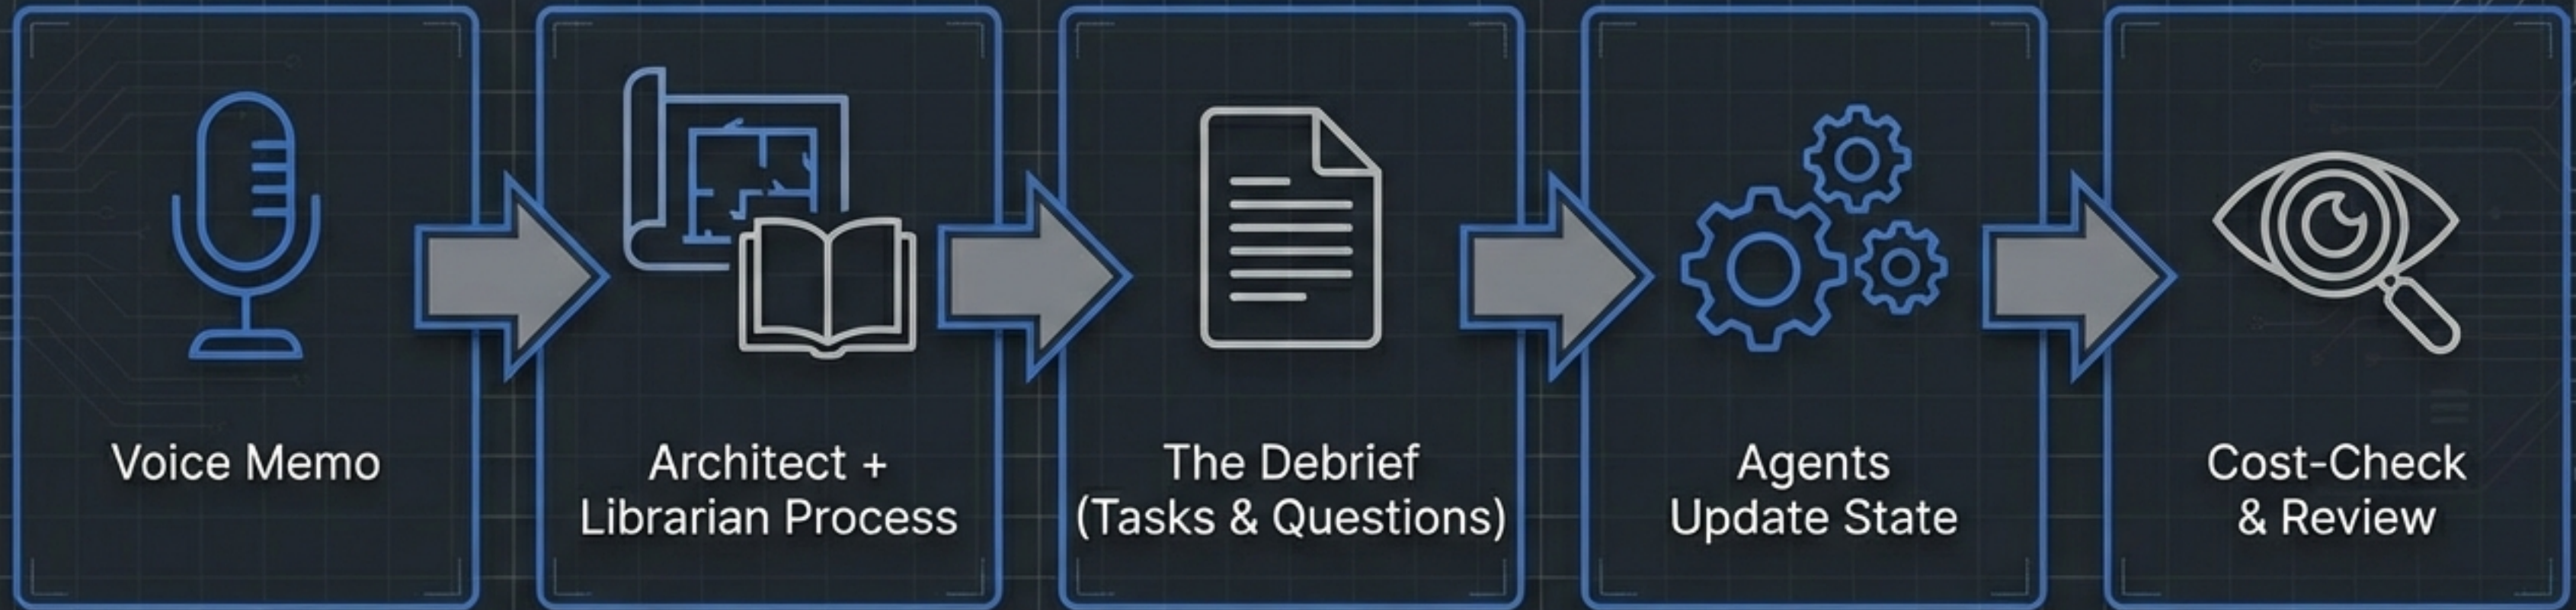

Feedback Loops & Dogfooding

Using SGraph Send to build SGraph Send.

Process Update: The Memo Workflow

Question: Is this the most high-value work right now?

Immediate Priorities (The P1 List)

DevOps

- Set up Dev/QA/Prod subdomain architecture.
- Create environment mapping document.

Dev & Architect

- Build CloudFront Log Pipeline (Raw → Aggregated). (JetBrains Mono)
- Implement Digital Twin Collectors. (JetBrains Mono)
- Design SA REST API.

Translator

- Audit website for untranslated content.
- Produce initial pt-BR translations.

**Directive: No new features.
Productise, Deploy, Optimise.**
