

From Dumb Pipes to Smart Workflows

Interactive Encrypted Data Workflows
(Exploration Brief v0.4.3)

DATE: 16 Feb 2026
FROM: Human (Project Lead)
TO: Explorer Team via Conductor
STATUS: Research & Prototype

The Insight: The Problem with Opaque Blobs

Passive Transfer

Currently, content goes in and comes out unchanged. The pipe is dumb.

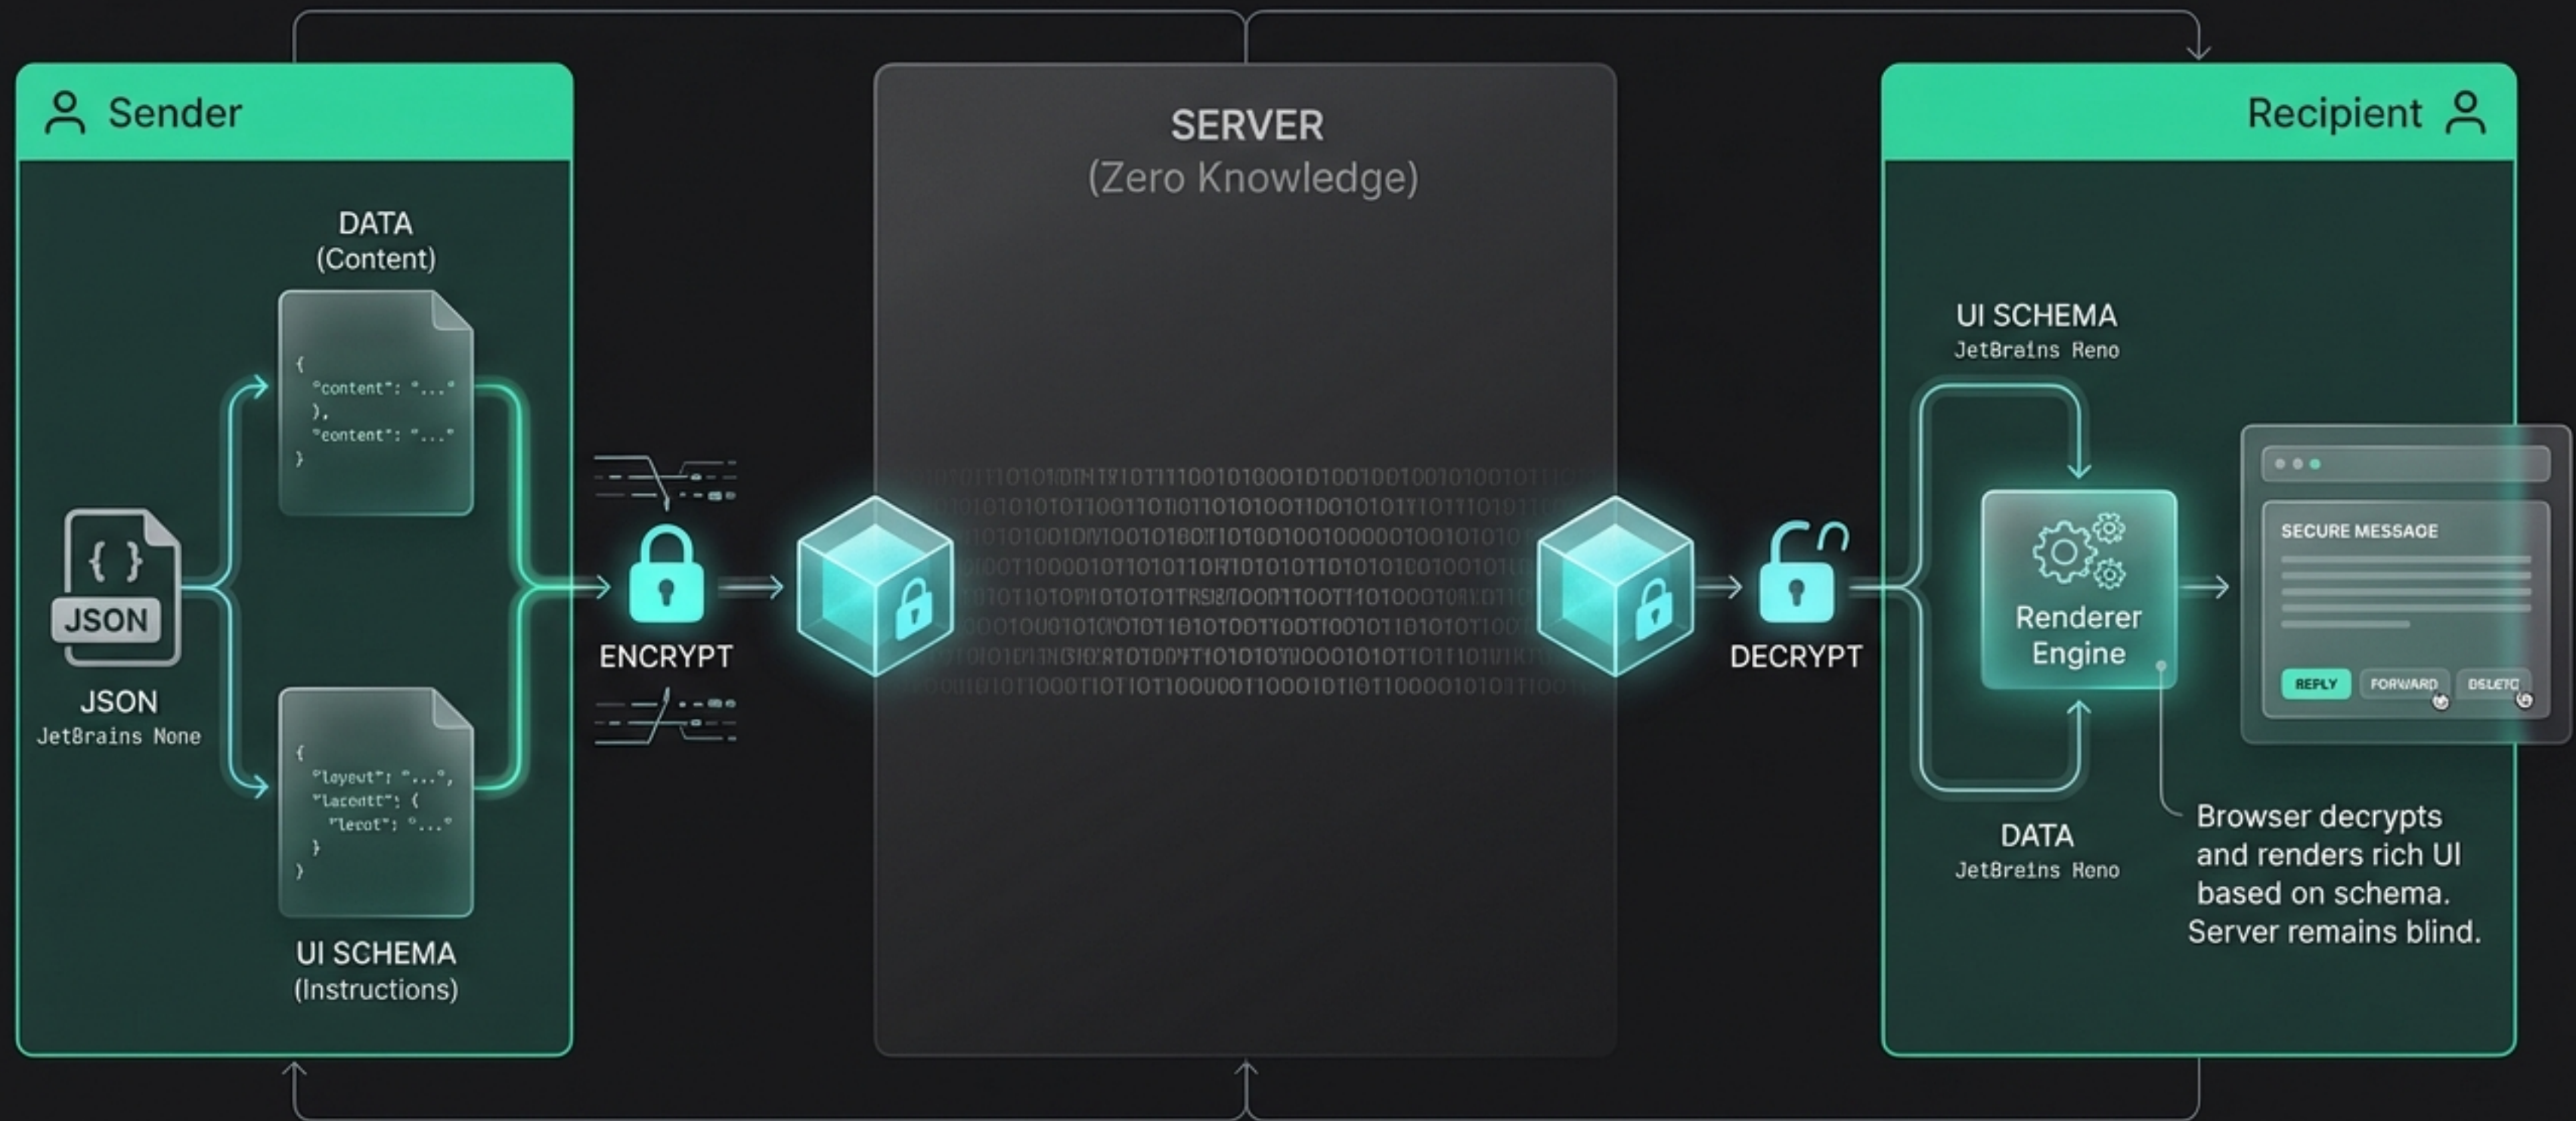

Friction

Recipient sees raw JSON or text. Must open external editors to work.

The Shift

Turning a file transfer utility into an **Encrypted Workflow Platform**.

The Core Concept: Client-Side Intelligence

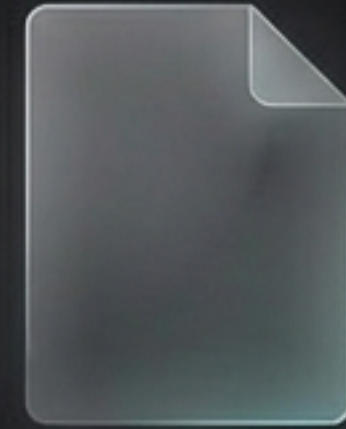

Dynamic Interface Generation via LLM

Review these 20 strings
for translation accuracy.

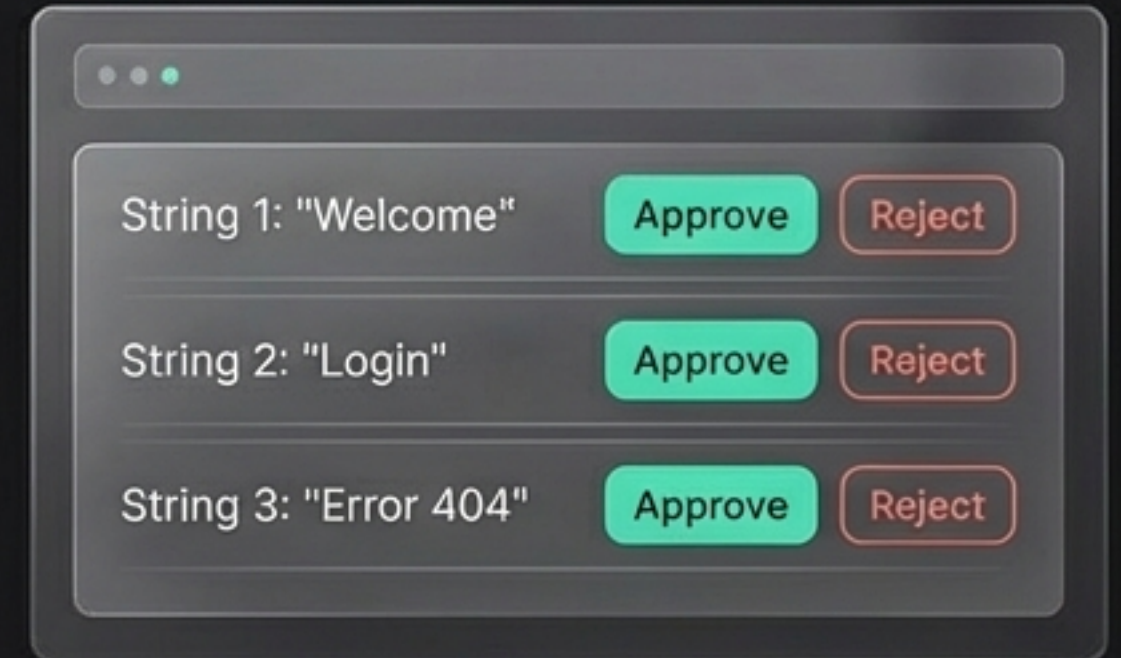

LLM Processing

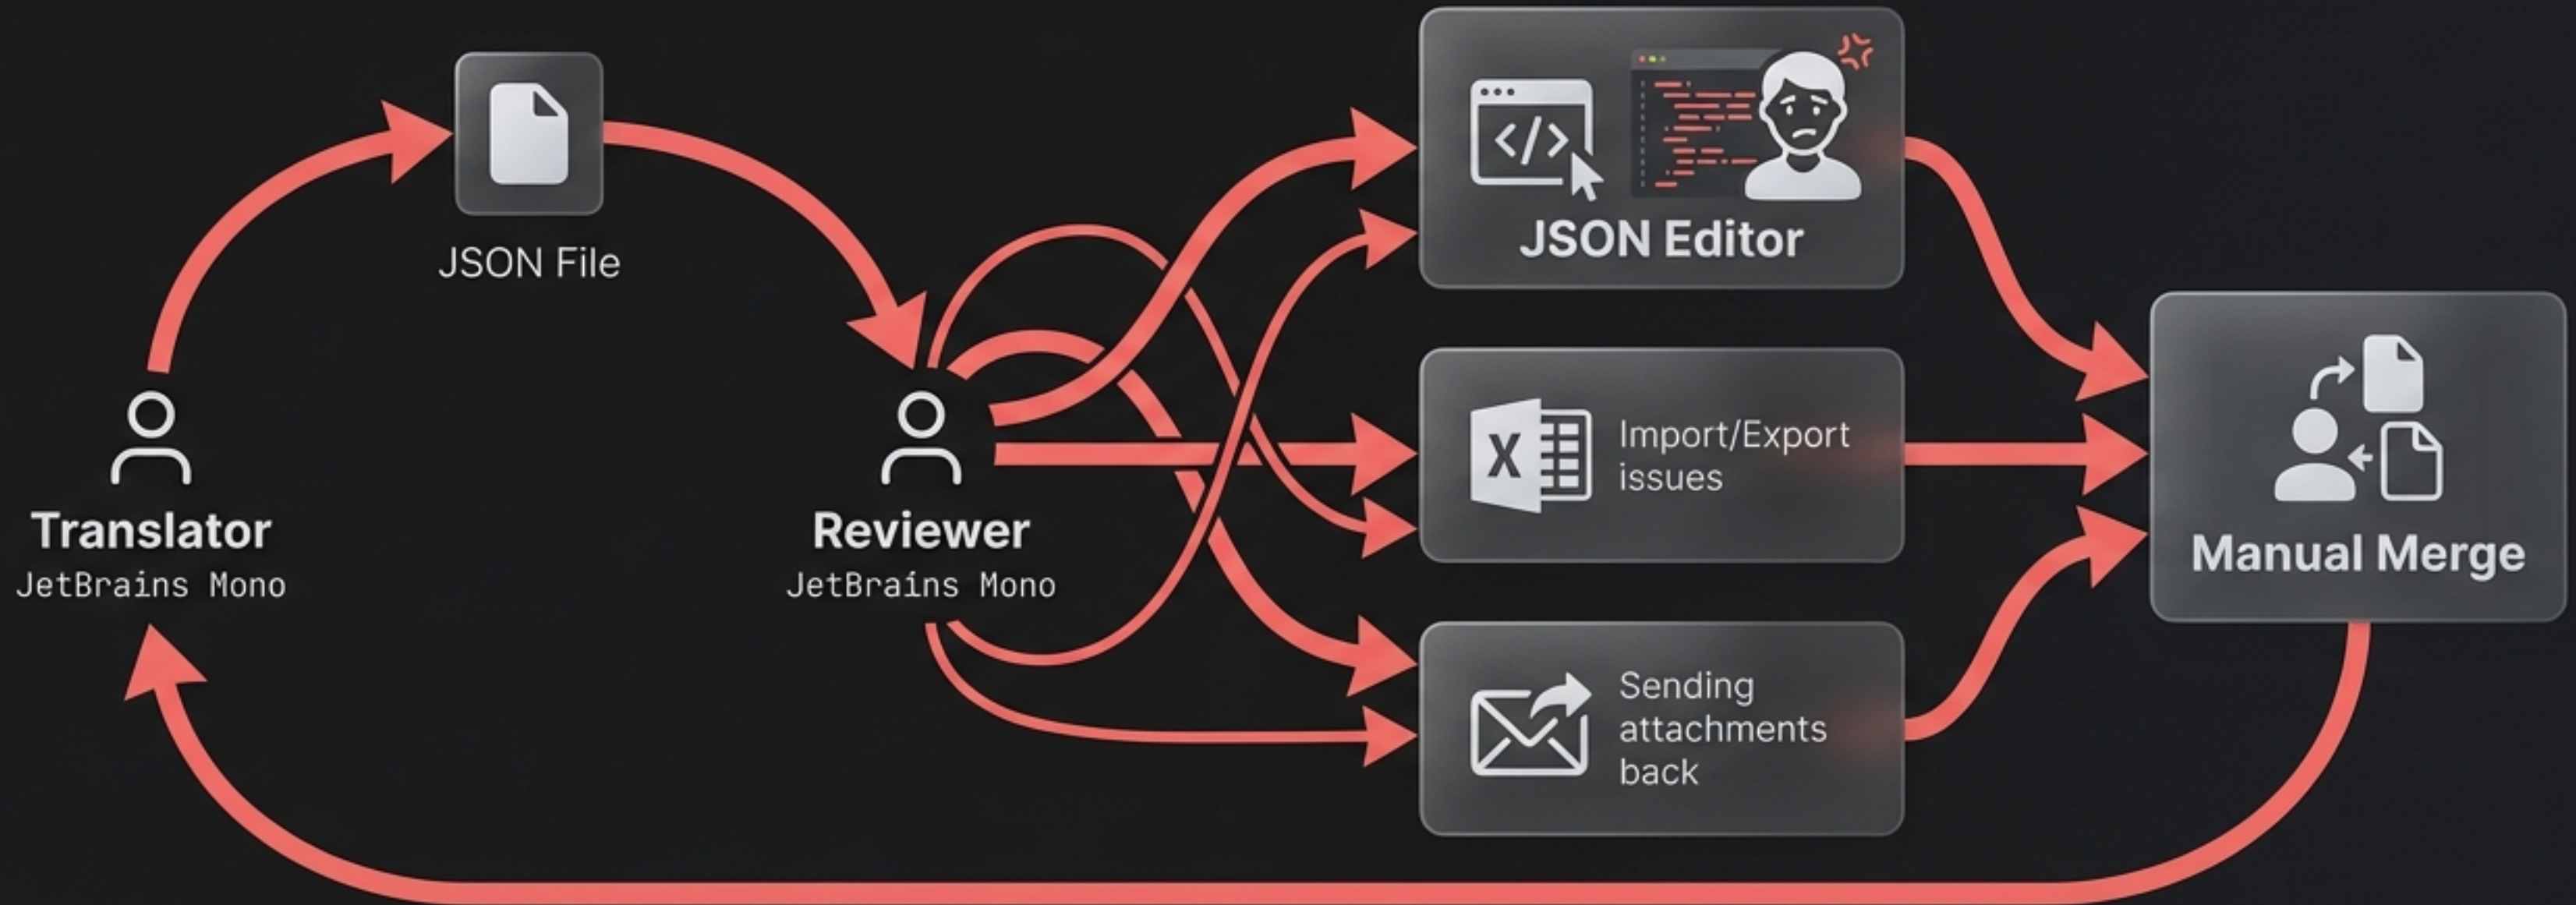

Generated UI Schema

- We do not need to hand-craft forms. The sender describes the intent, and the LLM generates the appropriate UI schema from a defined component library.
- **Implication:** Any structured data exchange becomes an interactive workflow instantly.

A preview of a UI schema in a browser window. It shows three rows, each with a string label and two buttons: 'Approve' (blue) and 'Reject' (red).

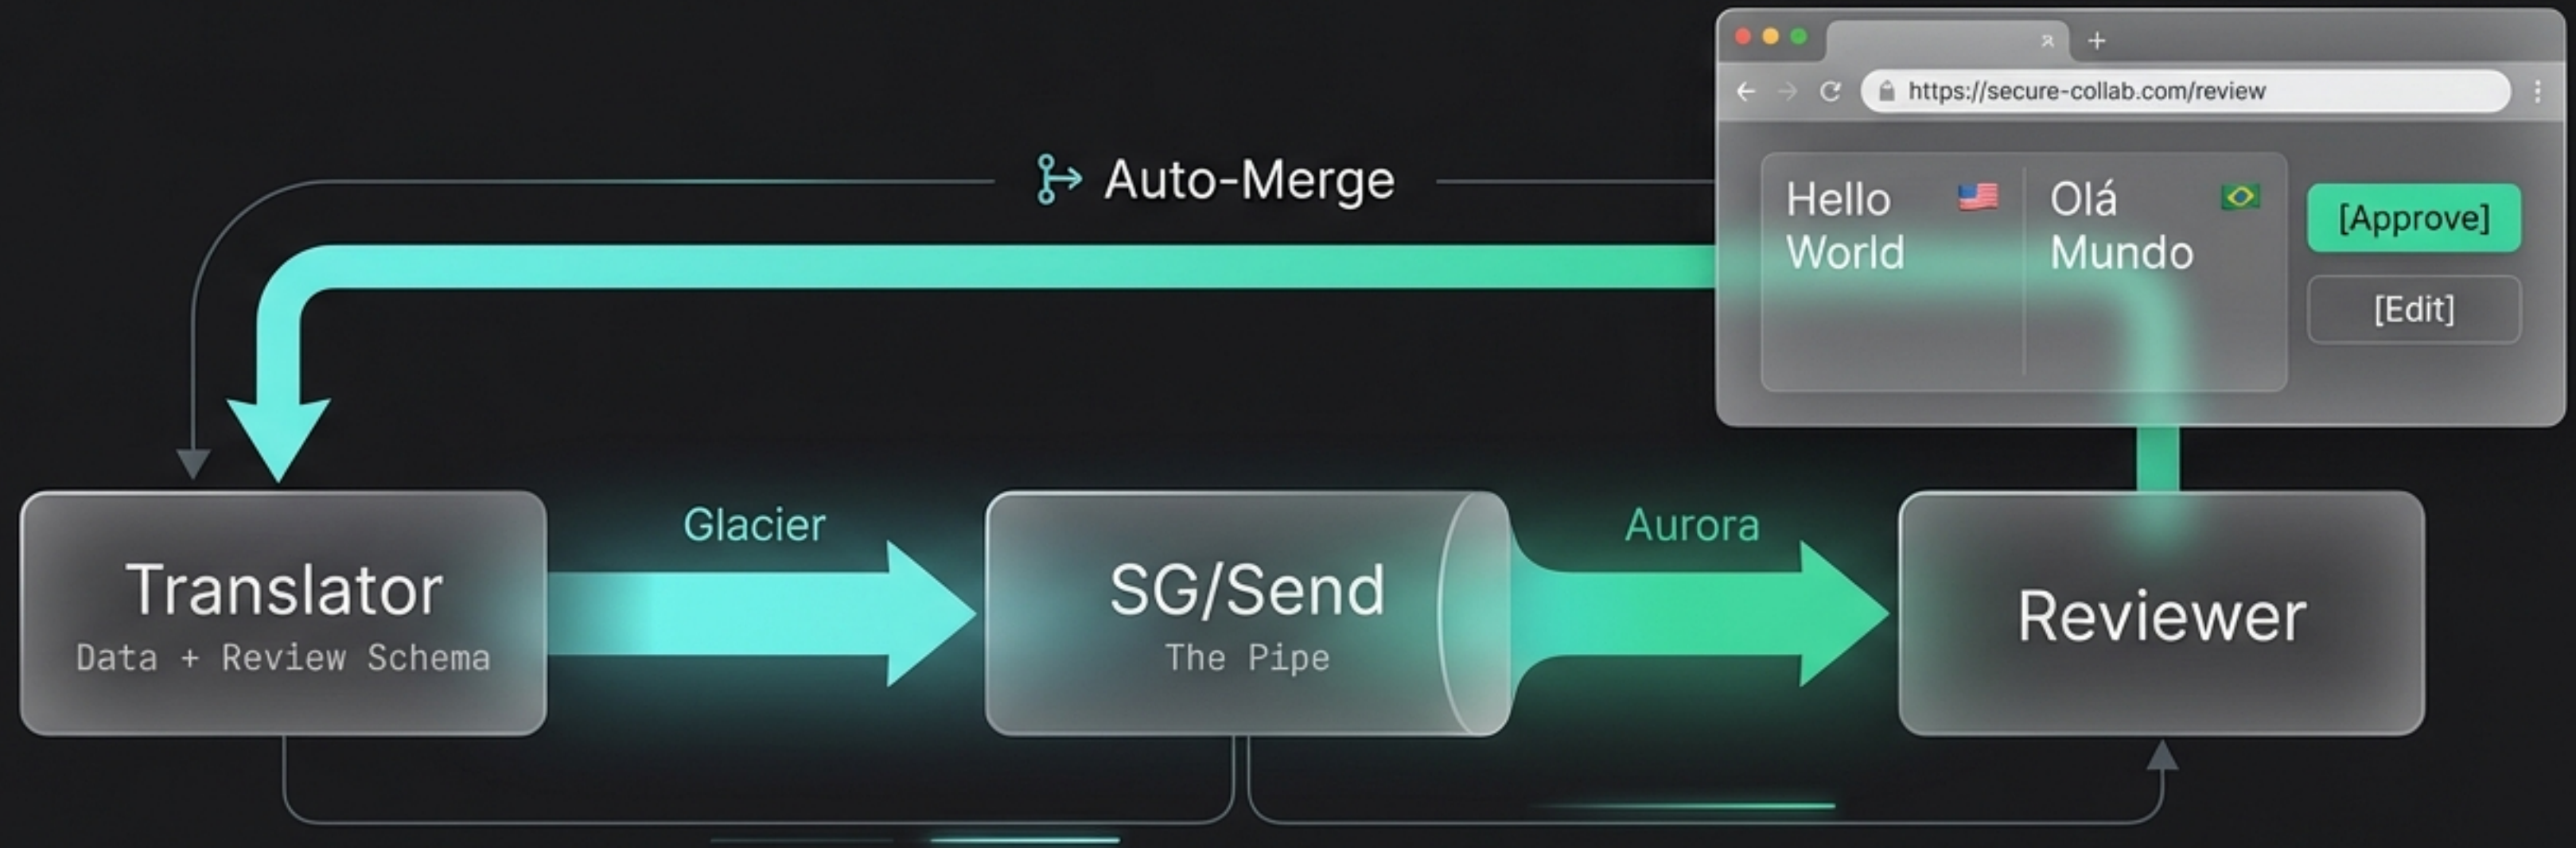

String 1: "Welcome"	Approve	Reject
String 2: "Login"	Approve	Reject
String 3: "Error 404"	Approve	Reject

Use Case 1: The Friction of Manual Translation Review

- Current State: Manual, disjointed, breaks the secure loop.
- Reviewer needs specific software.
- Merging feedback is a manual burden.

The Solution: **Seamless, Encrypted Collaboration**

- **The Interactive Flow:** Reviewer clicks link, decrypts, and sees a generated UI.
- No special software required. Just a browser and a token.

Use Case 2: Secure Cross-Language Communication

Three methods for delivery

Option A: Client-Side LLM

Local/WASM model.
Maximum privacy. Content
never leaves the device.

Option B: API Call

Claude/GPT API. Higher quality.
Requires user consent to send
decrypted text to provider.

Option C: Pre-Translated

Sender handles translation.
Recipient receives original +
translated versions.

Business Value: Positions SG/Send as a communication platform, not just storage.

The Enterprise Dimension: Corporate Identity

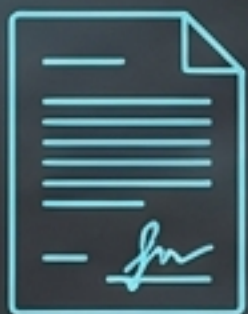

Multinationals need content translated into a specific Brand Voice.

Feature: Per-entity Translation Profiles.

Subsidiaries review content in their own voice, avoiding “mothership-tone” communications.

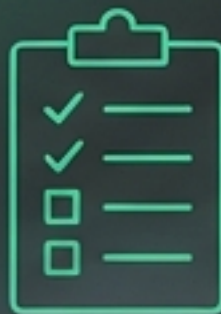

Beyond Translation: General-Purpose Workflows

Document Approval

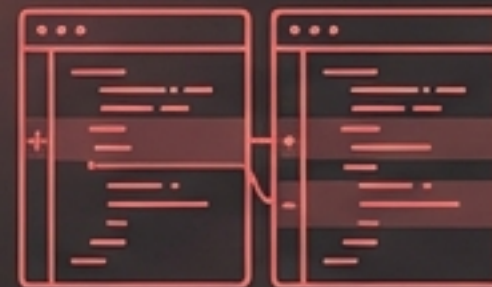

Section-level comments and signing.
JetBrains Mono

Surveys

Secure data collection.
JetBrains Mono

Code Review

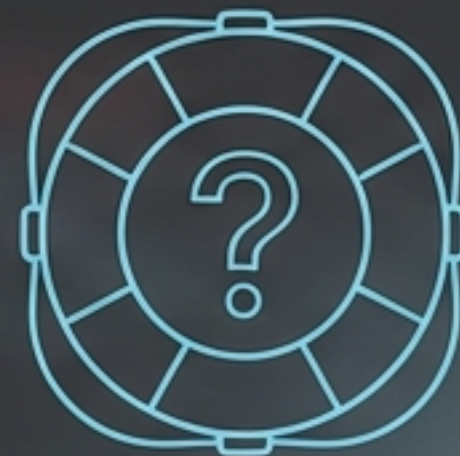

Diff viewing and inline comments.
JetBrains Mono

Multi-Party

Aggregating approvals.
JetBrains Mono

Customer Support

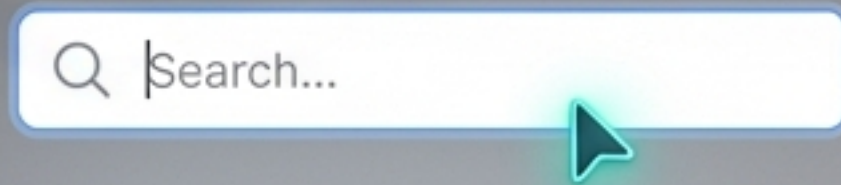

Structured tickets via token.
JetBrains Mono

Inter

The Component Library

`<text-input>`

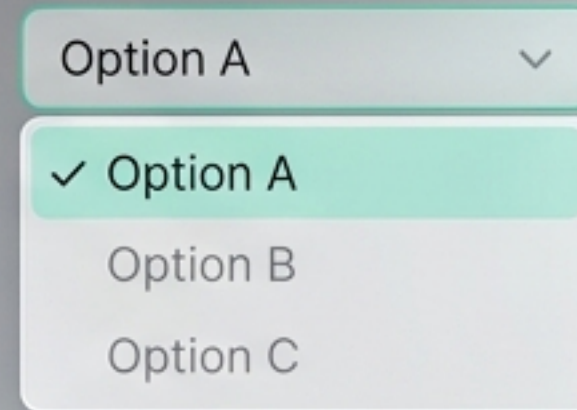

`<approval-buttons>`

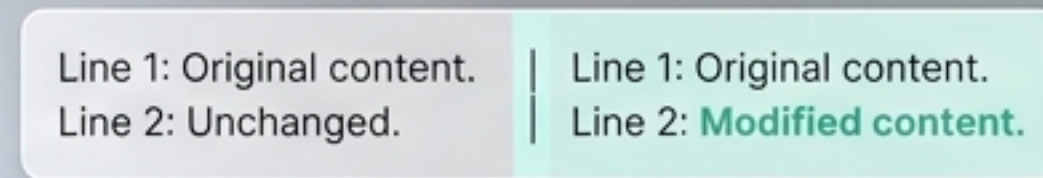

JetBrains Mono

JetBrains Mono

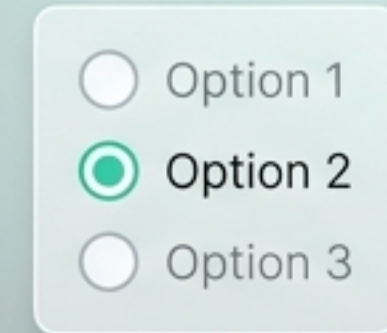

`<dropdown>`

`<diff-viewer>`

`<radio-group>`

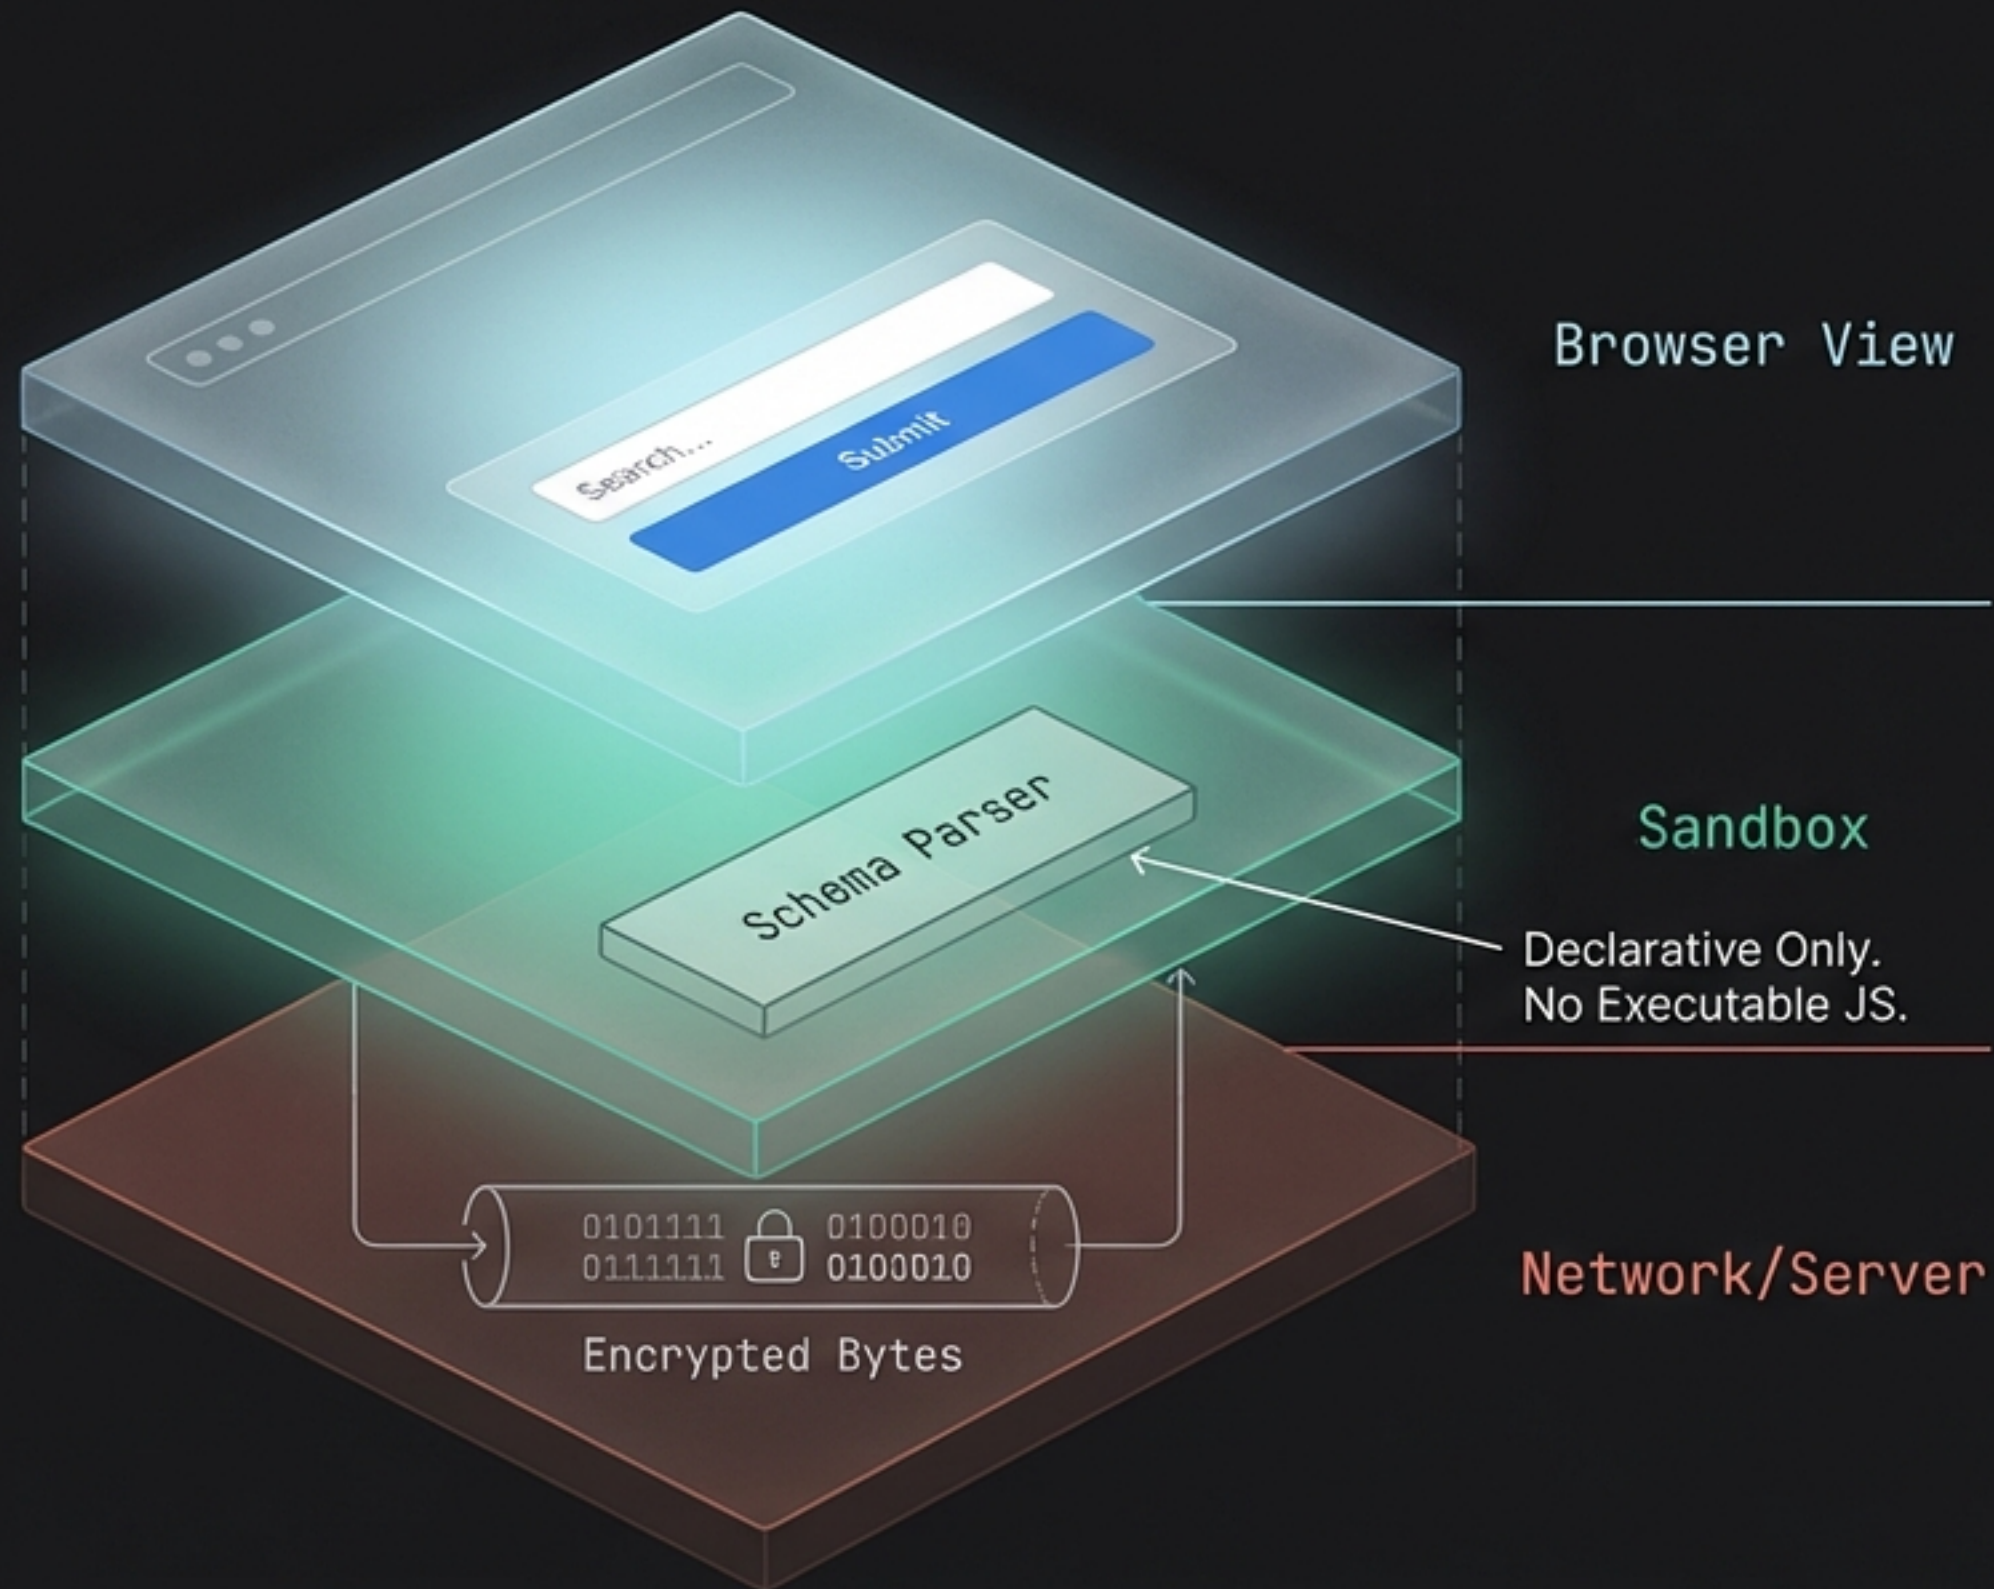

`<signature>`

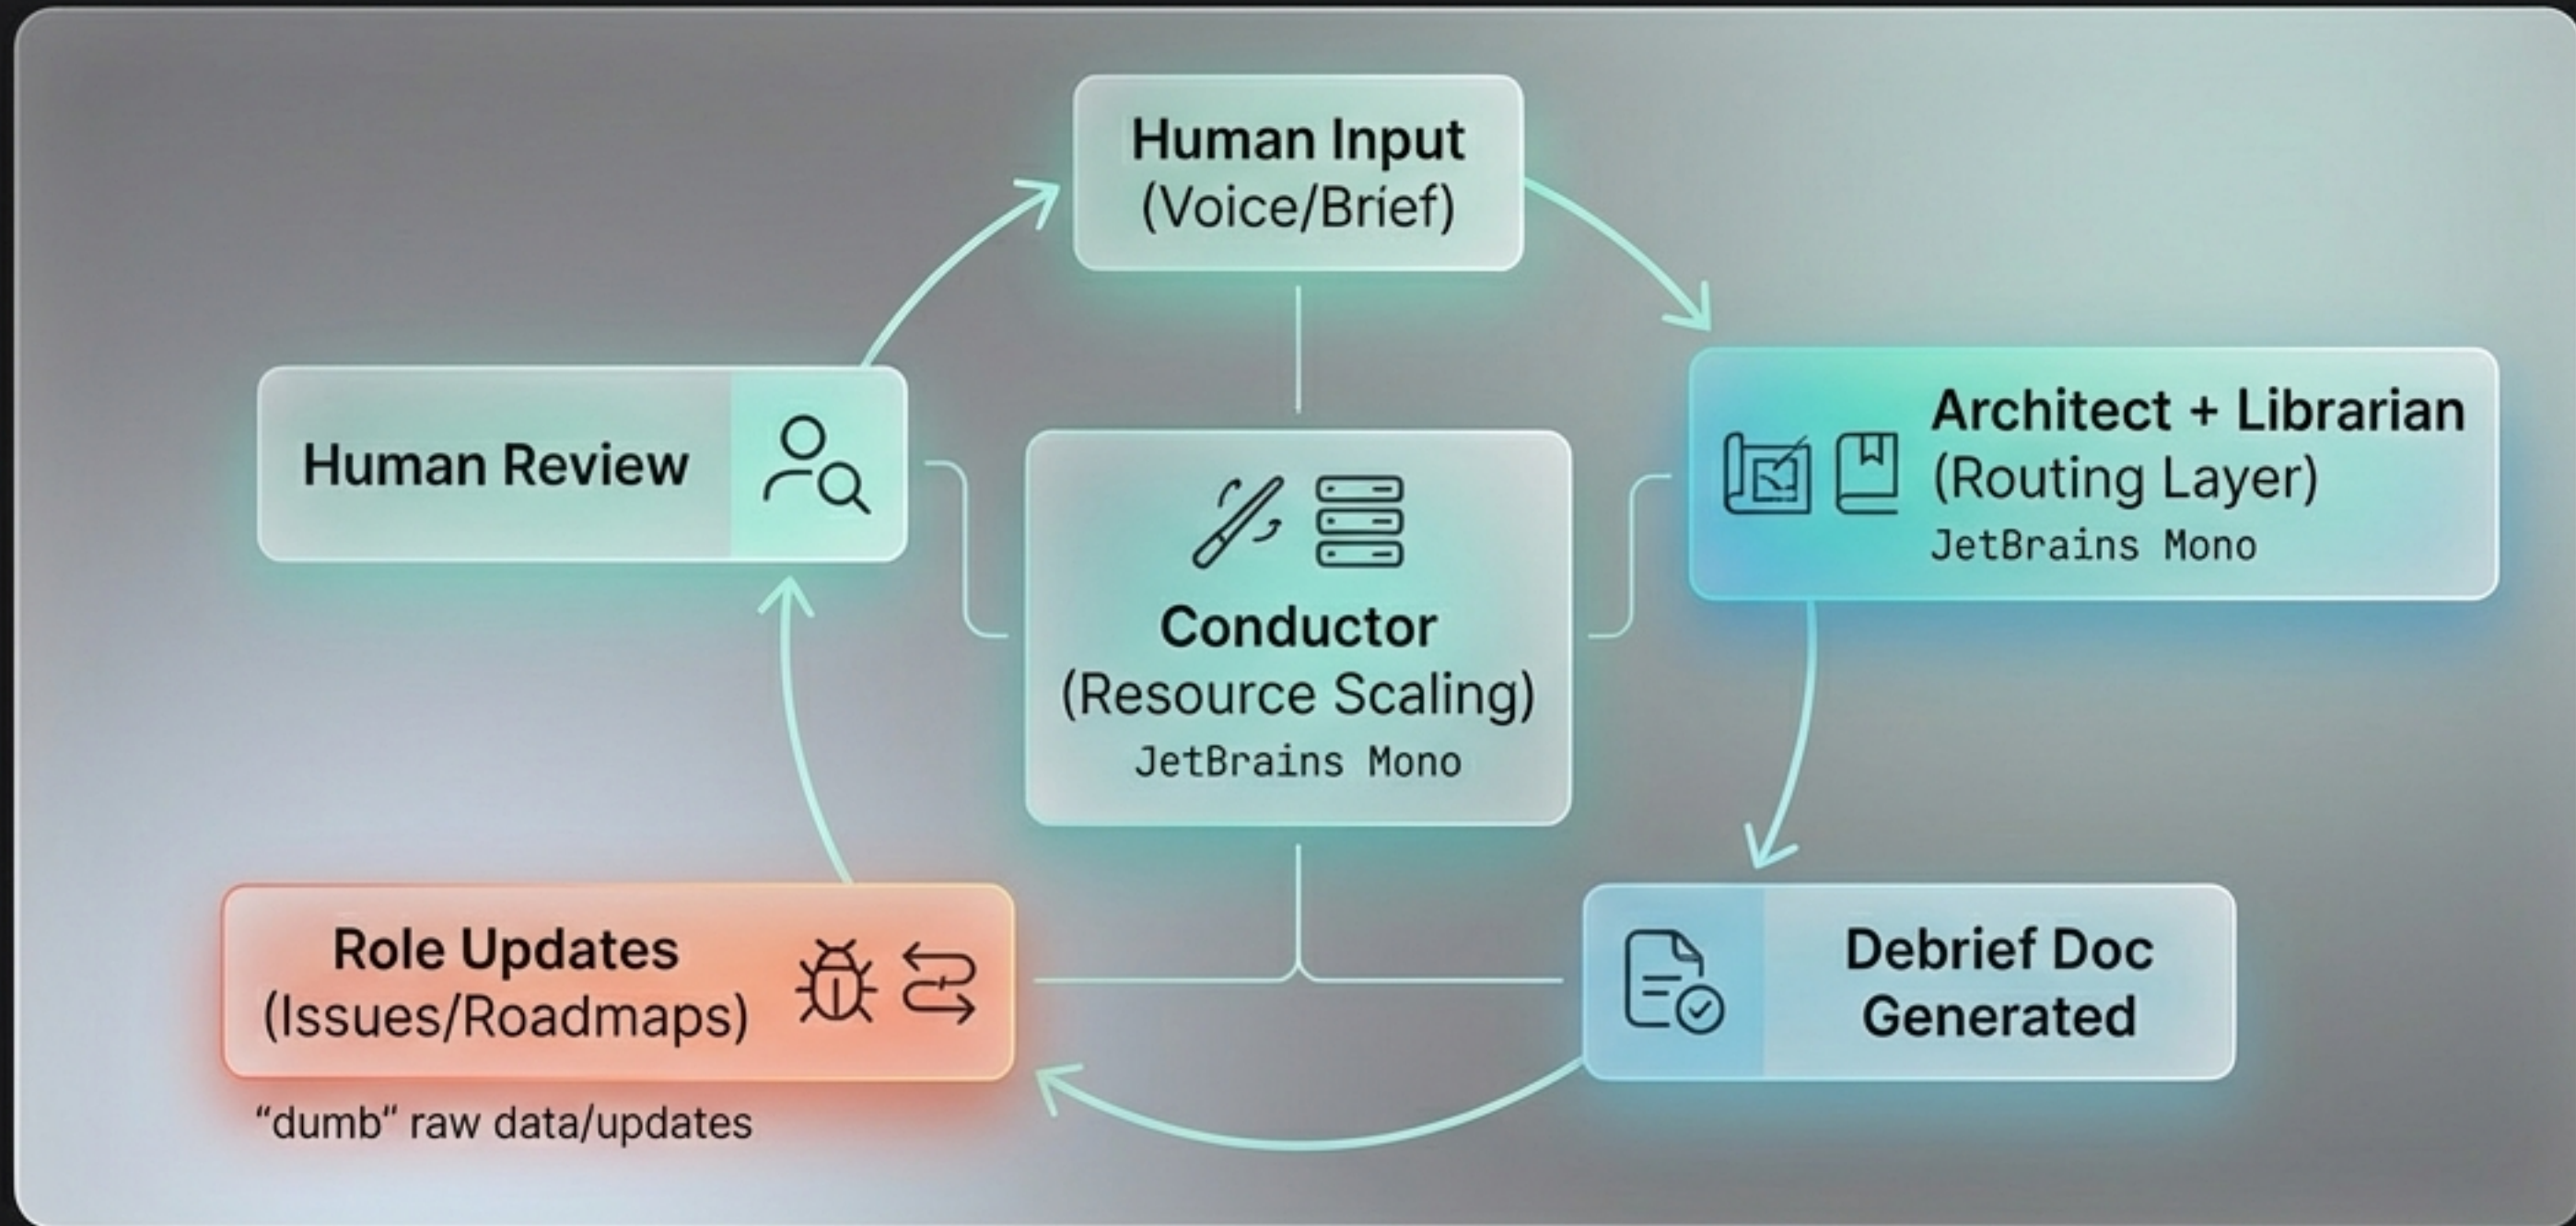

Standard HTML/CSS/JS. No complex frameworks. Styled with Aurora/Glacier themes.

Security Model: The Server Remains Blind

- **Zero Knowledge:** Server **never sees** content or forms.
- **Trust:** Schema is declarative (describes WHAT, not HOW).
- **Safety:** Components are pre-audited. Rendering is sandboxed.
- **AppSec Focus:** Prevent data exfiltration via schema manipulation.

Operational Update: The Daily Memo Workflow

- **Routing:** Architect & Librarian ensure nothing is lost.
- **Cost-Effectiveness:** Agents only spin up when tasks exist.

Immediate Research Tasks & Priorities

Priority 2 (Immediate)

- ☒ Design UI Component Library (Architect, Designer) in JetBrains Mono
- ☒ Prototype Translation Review Workflow (Dev, Translator) in JetBrains Mono
- ☒ Security Review: Schema injection risks (AppSec) in JetBrains Mono

Priority 3 (Next)

- ☒ Research Client-side LLMs (WASM) for translation in JetBrains Mono
- ☒ Test reliability of LLM-generated schemas

Long Term

- ☐ Component library for Admin/Dashboard

The Strategic Opportunity

Evolution: From Secure File Transfer to Secure Cross-Language Communication.

Call to Action: Begin research on Use Case 1 (Translation Review) immediately.
