

Platform Evolution Proposal: Open Source, Graph- Driven, driven, AI-Native.

Accelerating The Grafter's mission
to reduce the 80% of businesses
that never sell.

Prepared for Rachel Murphy by
The Cyber Boardroom (Customer & Community Member)

February 2026

The Opportunity in Brief.

01 THE CONTEXT

We are customers who believe in the mission. We are not external consultants; we are users who want to contribute to the platform's success.

02 THE INSIGHT

The Graftor's methodology is world-class, but the current digital platform acts as a friction point rather than an accelerator. It currently functions as a compliance exercise.

03 THE PROPOSAL

Evolve from form-filling to AI extraction, from static reports to a living graph, and from a closed system to an open ecosystem.

04 THE OFFER

A risk-free technical discovery and strategy phase, delivered as a gift to the project. No immediate commitment required.

The Hardest Parts Are Already Done.

Technology is easy; trust is hard. The Grafter possesses rare assets that AI cannot replicate.

Proven Methodology

Over 30 businesses supported with £150m+ revenue represented. Built on "lived experience" from a twice-exited founder, not recycled theory.

Real Community

A genuine network where people know each other and have phone numbers. It is not just a mailing list; the Founders Programme has built real depth.

Emotional Intelligence

A distinct competitive advantage in focusing on the "softer side"—founder readiness—rather than just valuation numbers.

Content Depth

A 200-page playbook and diagnostic framework that assesses maturity across strategy, finance, and operations.

From 'Compliance Exercise' to 'Strategic Advantage.'

- Digitised playbook with manual workload.
- User Burden: Open-ended questions ("What is your strategy?") cause overwhelm.
- Data remains siloed in opaque backend.
- Metaphor: The user is pushing the car.

- AI extracts context automatically.
- User Validation: "Is this right?" reduces cognitive load.
- Data flows into a connected graph.
- Metaphor: The platform is the engine.

Three Shifts to Redefine the Founder Journey.

01. Input → Confirmation

From "Tell us everything"
(Manual Forms) to "Confirm
what we found"
(AI Extraction).

02. Checklist → Graph

From static reports to a
living advisory system where
data points are connected.

03. Closed → Open

From a walled garden to an
open ecosystem where
openness acts as a moat.

Shift 1: Stop Asking. Start Extracting.

- **The Concept:** The platform should do the heavy lifting before the founder logs in.
- **The Mechanism:** Ingest URL, LinkedIn, Voice Memos → AI Structure → Founder Validation.
- **The Benefit:** Dramatically lowers cognitive load. Moves user task from “Write this down” to “Is this right?”.

Shift 2: Context is King.

- **The Concept:** Moving from a one-time report to a living advisory system.
- **The Mechanism:** Recommendations are linked to specific data points. The graph surfaces the “who should talk to whom” layer.
- **The Benefit:** The platform becomes the “connective tissue” of the community.

Shift 3: Openness as a Moat.

- **The Concept:** The platform base and data schemas should be **open source**.
- **The Mechanism:** Data stored in portable JSON. Users can export everything. External agents can integrate.
- **The Insight:** You don't lose value by opening the code; you **gain trust and adoption**.

Monetising Wisdom, Not Walls.

PREMIUM (PAID VALUE)

Private Strategy Data Hosting
Enterprise Security Features
The Founders Programme
Human Expertise / Advisory

COMMODITY (FREE / OPEN)

Software Rails
Data Structure (JSON)
Standard Definitions
Open Source Base

“The Grafter’s real value lives in the human expertise layer.”

The AI Wave is Reshaping Consulting

The Threat

Standard consulting models are being eaten by AI. Platforms that remain closed, form-heavy, and disconnected will become obsolete.

The Opportunity

An open, graph-aware platform combined with The Grafter's human credibility is the winning formula.

To move the '80% failure' metric, the platform needs to be as effective as the methodology.

Our Proposal: A Gift to the Project.

We are not asking for a contract. We are offering an output.

Strategy First, Code Later.

We are not throwing developers at this yet. The 'Agentic' team focuses on architecture.

The Architect

Systems thinking and data modelling. Ensuring the foundation is scalable.

Data structure models
Scalability analysis

The Cartographer

Wardley mapping the landscape to understand value chains.

Value chain mapping
Landscape analysis

The Historian

Understanding and documenting what has already been built to preserve value.

Legacy system documentation
Value preservation

Deep Dive Materials.

Alongside this presentation, we have prepared the following documentation:

Strategic Briefing

Full platform vision covering architecture, data model, UX, and open-source strategy.

Technical Discovery Brief

Structured, non-adversarial interview questions for the current Technical Lead.

GitHub Repo Brief

Scope and structure for the open-source customer engagement workspace.

Let's Start the Evolution.

We are proceeding with setting up the public repo in the spirit of Open Source.

We invite you to a conversation to walk through this vision in detail. Rachel and the team have full visibility from Day 1.

**This isn't a rebuild,
it's an evolution.**
