

Technical Discovery: The Graftor Platform

Operational Brief for AI-Assisted Voice Interview

DATE: 2026-02-17

VERSION: v0.1.0

AUTHOR: The Cyber Boardroom (Architect & Journalist Roles)

SUBJECT: Current Technical Lead

The Objective: Digitising Tacit Knowledge

THEORETICAL ARCHITECTURE

OPERATIONAL REALITY

We need to understand the system as it is, not just as it was designed. The context—constraints, **trade-offs**, and **"roads not taken"**—is as valuable as the architecture diagram itself.

Reality over Theory

Avoid proposals disconnected from the live platform.

Historical Context

Capture the "Why" behind decisions.

Risk Mitigation

Identify hidden dependencies and technical debt.

Operational Overview

SUBJECT:

[REDACTED]
Current Technical Lead of
The Graftor Platform

METHOD:

[REDACTED]
LLM Voice Mode
(ChatGPT / Claude)

DURATION:

[REDACTED]
Approx. 25–35 Minutes

FORMAT:

[REDACTED]
Self-guided interview,
structured markdown output

OUTPUT DESTINATION:

[REDACTED]
Project Team (Rachel)

COVERAGE:

[REDACTED]
Architecture, Open-Source
Readiness, Tech Debt

Protocol: Conducting the Voice Session

Initialise

Open your preferred LLM LLM with voice mode enabled.

Prompt

Paste the specific interview prompt into the chat.

Engage

Speak naturally. Allow the AI to interview you.

Conclude

The LLM generates a structured markdown summary.

Distribute

Share raw markdown output with Rachel & Team.

Optimising the Interview Experience

- There are no wrong answers. We want an honest picture of where the platform is today.
- The AI acts as a facilitator to extract the 'mental map' of the system.

PRO-TIPS FOR THE LEAD

- **Speak Naturally:** Treat it like a peer conversation. Follow interesting threads.
- **Sketch Freely:** If you need to draw, sketch on paper while talking. Photo/digitise later.
- **Focus on 'Why':** Explain constraints and trade-offs, not just the 'What'.

The Post-Interview Workflow

The Analysis Matrix: Processing the Output

Strategic Outputs & Deliverables

Architecture Proposals

Foundations for future platform evolution.

PENDING INPUT

Open-Source Readiness

Assessment for GitHub publication strategy.

PENDING INPUT

Migration Plan

Strategy for data layer/frontend changes.

PENDING INPUT

Risk Register

Documentation of technical debt & dependencies.

PENDING INPUT

These artifacts ensure the new platform is built on a foundation of reality, not assumption.

Immediate Actions

- > **ASSIGNMENT: Technical Lead**
 - [] Schedule & conduct 35-min session (Target: This Week)
- > **ASSIGNMENT: Project Team**
 - [] Prepare repository for markdown/diagram upload
- > **RESOURCES:**
 - * Link: `/docs/grafter-voice-prompt.txt`
 - * Link: `/repo/technical-discovery/upload`

Execute

“The context you provide is the map for our next expedition.”
