

GitHub Repository Brief — The Grafter (Customer Perspective)

Project: The Grafter — Open Source Customer Engagement

Organisation: The Cyber Boardroom

Date: February 2026

Licence: Creative Commons (documentation & materials) + appropriate OSS licence (code/bots)

Purpose

This repository serves as the working space for The Cyber Boardroom's engagement with The Grafter platform — approached from the perspective of an active customer who wants to consume, contribute to, and help improve the platform.

The repo has three functions:

1. **Documentation hub** — publish all strategic briefs, research, and materials being produced during this engagement.
2. **Agent/bot workspace** — house the first versions of the agentic setup (architect, journalist, cartographer, etc.) being used to drive the project.
3. **Demonstration environment** — provide a tangible, working example that shows the project lead and stakeholders how the agentic workflow, open-source model, and tooling fit together.

Repository Structure

grafter-customer/	
├─ README.md	# Project overview, context, and how to navigate
├─ LICENSE	# Creative Commons for docs, OSS for code
├─ docs/	
│ └─ strategic-briefing.md	# Platform strategic vision
│ └─ technical-discovery-brief.md	# Interview brief for current Technical Lead
│ └─ architecture/	# Architecture decisions and proposals
│ └─ research/	# Public information research on Graftor
├─ agents/	
│ └─ README.md	# Agent setup overview and roles
│ └─ architect/	# Architect agent config and prompts
│ └─ journalist/	# Journalist agent config and prompts
│ └─ cartographer/	# Cartographer agent (Wardley Maps)
│ └─ librarian/	# Knowledge management agent
│ └─ historian/	# Decision logging agent
│ └─ conductor/	# Orchestration agent
├─ research/	
│ └─ public-info/	# Collected public information about Graftor
│ └─ platform-analysis/	# Analysis of current platform (public-facing)
└─ materials/	
└─ voice-memos/	# Transcripts and synthesised outputs

What Gets Published

Everything in this repo is shared openly as a demonstration of the open-source, customer-driven approach

being advocated for the platform itself. Specifically:

- **Strategic documents** — all briefs, proposals, and architecture recommendations (Creative Commons licensed).
- **Agent configurations** — the bot/agent setup including prompts, role definitions, and orchestration patterns.
- **Research outputs** — publicly sourced information about the Grafter platform and ecosystem.
- **Voice memo syntheses** — processed and structured outputs from voice memo captures (not raw audio).

Narrative & Positioning

The story this repo tells:

"We are a customer of The Grafter. We want to help. We want to start consuming the platform and contributing back. So we're sharing all of our ideas, research, and tooling openly — under Creative Commons and open-source licences — as a practical demonstration of what an open-source, community-driven approach to the platform could look like."

This is not a fork or a competing project. It's a customer showing up with tools, ideas, and willingness to contribute — and publishing everything transparently so others can do the same.

Initial Setup Tasks

1. **Create the repo** with the directory structure above.
2. **Add existing documents** — migrate the strategic briefing and technical discovery brief into `docs/`.
3. **Set up the agent framework** — initialise the conductor and first agent roles in `agents/`.
4. **Run public research** — use available tools (web search, AI research) to gather and document publicly available information about The Grafter platform, team, and ecosystem into `research/`.
5. **Configure CI/CD** — basic linting and doc validation (lightweight, expand later).
6. **Write the README** — clear narrative on who this is for, what it contains, and how to engage.

Licensing

Content Type	Licence
Documentation, briefs, research	Creative Commons (CC BY 4.0 recommended)
Code, agent configs, tooling	MIT or Apache 2.0 (TBD based on dependencies)

This brief is part of The Grafter platform strategic planning initiative, driven from a customer perspective by The Cyber Boardroom.
