

SG/Send: The Next Evolution

Advanced Security, Governance, and Workflow for Investment Groups

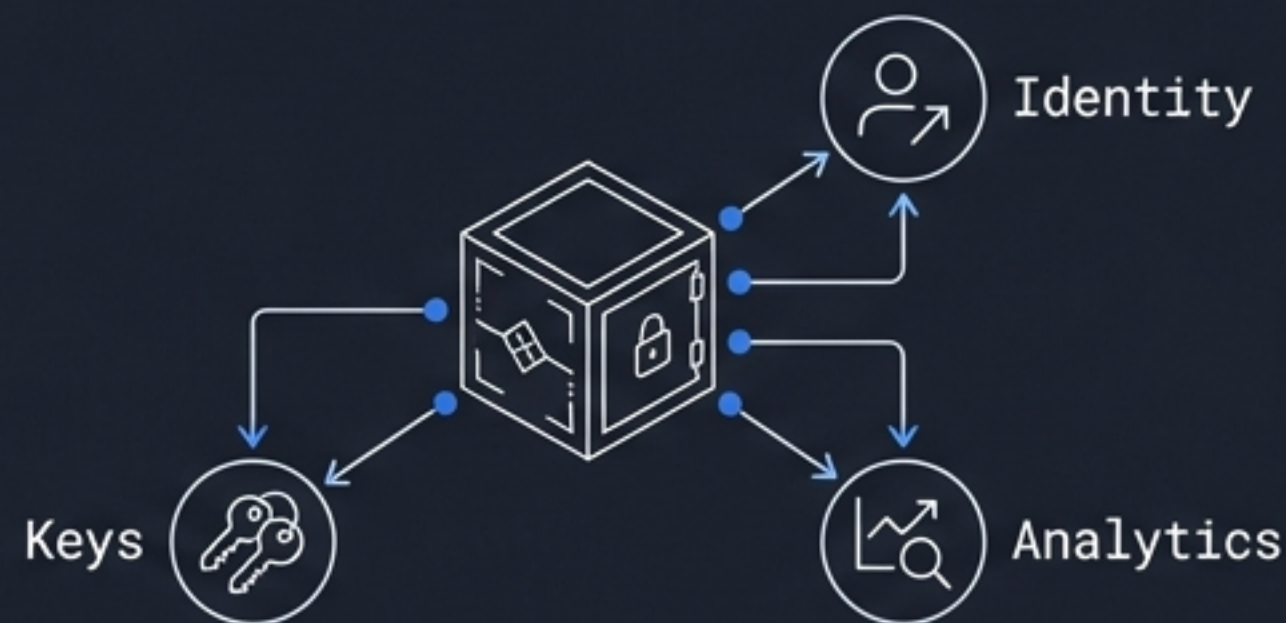

Moving Beyond Simple File Transfer

CURRENT STATE: The Vault

- Zero-knowledge encryption
- Isolated portfolios
- Basic transfer capabilities
- Raw but secure

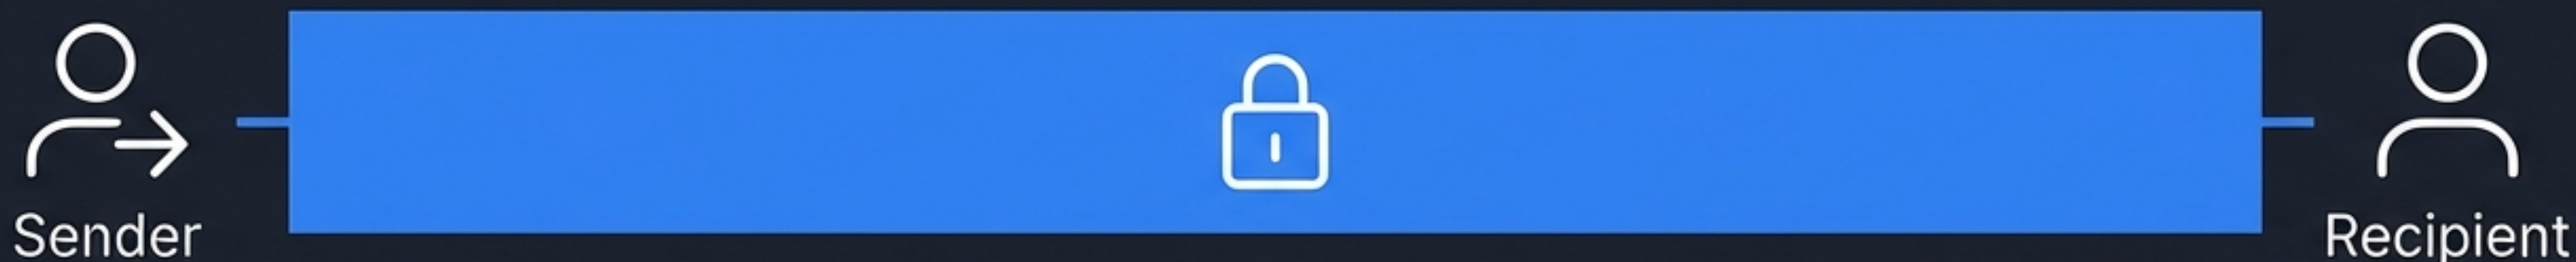

FUTURE STATE: The Headquarters

- **Sovereignty:** Recipient-defined keys and PKI
- **Visibility:** Radical tracking of access and timing
- **Identity:** Branded environments and corporate SSO

We have built the vault. Now we are building the headquarters around it.

The Foundation: What Works Today

Zero-Knowledge Encryption

Files are encrypted before they leave the sender. The platform never sees the unencrypted data.

Dedicated Deployments

No shared infrastructure. Total isolation per client.

Portfolio Isolation

Specific environments for specific assets or deals.

This architecture remains. The following updates add control, visibility, and governance layers on top of this foundation.

Pillar 1: Encryption Sovereignty & PKI

Recipient-Defined Keys

The recipient (e.g., a Portfolio CFO) provides the key. You use it. You never store their secret. They hold the keys to their own data end-to-end.

Public Key Infrastructure (PKI)

- Publish a public key on your firm's site. Receive files securely without key exchange.
- Benefit: Sender Verification (Non-repudiation). If signed with a private key, the sender cannot deny sending it.

Pillar 2: Radical Visibility

In deal-making, timing is information. Real-time insights into document engagement.

Document Audit: Term Sheet v3.pdf

Document Sent

16 Feb 2026 | 09:00 UTC | User: Partner_A

Link Accessed

16 Feb 2026 | 09:15 UTC | 1 Access Event

Decrypted & Downloaded

16 Feb 2026 | 09:17 UTC (UTC+1 Timezone)

Data Points Available

- Time of initial access
- Time of decryption and download
- Frequency of access
- Time zone data (Privacy-preserving)

Pillar 3: Ephemeral Access & Risk Reduction

Reduce the surface area of risk by automating data deletion.

One-Time Download

Ideal for credentials (API keys, MFA seeds). Once retrieved, the link is dead. Mathematical certainty that only one person saw it.

Time-Limited Access

"Draft Term Sheet - Expires in 24h." If the deal stalls, the data disappears. No chasing deletion requests.

Self-Destruct

Messages that vanish after one hour. No permanent server record.

Pillar 4: Brand Authority

Security should look like YOU, not a generic vendor.
Builds trust with portfolio companies.

Firm Brand

 **Acme Capital**

secure.acmecapital.com

Full customisation. Your logo, your colours, your domain.

Co-Branded

Sent by Acme Capital to Target Corp

Contextual trust. Header shows the Firm; context shows the Portfolio Company.

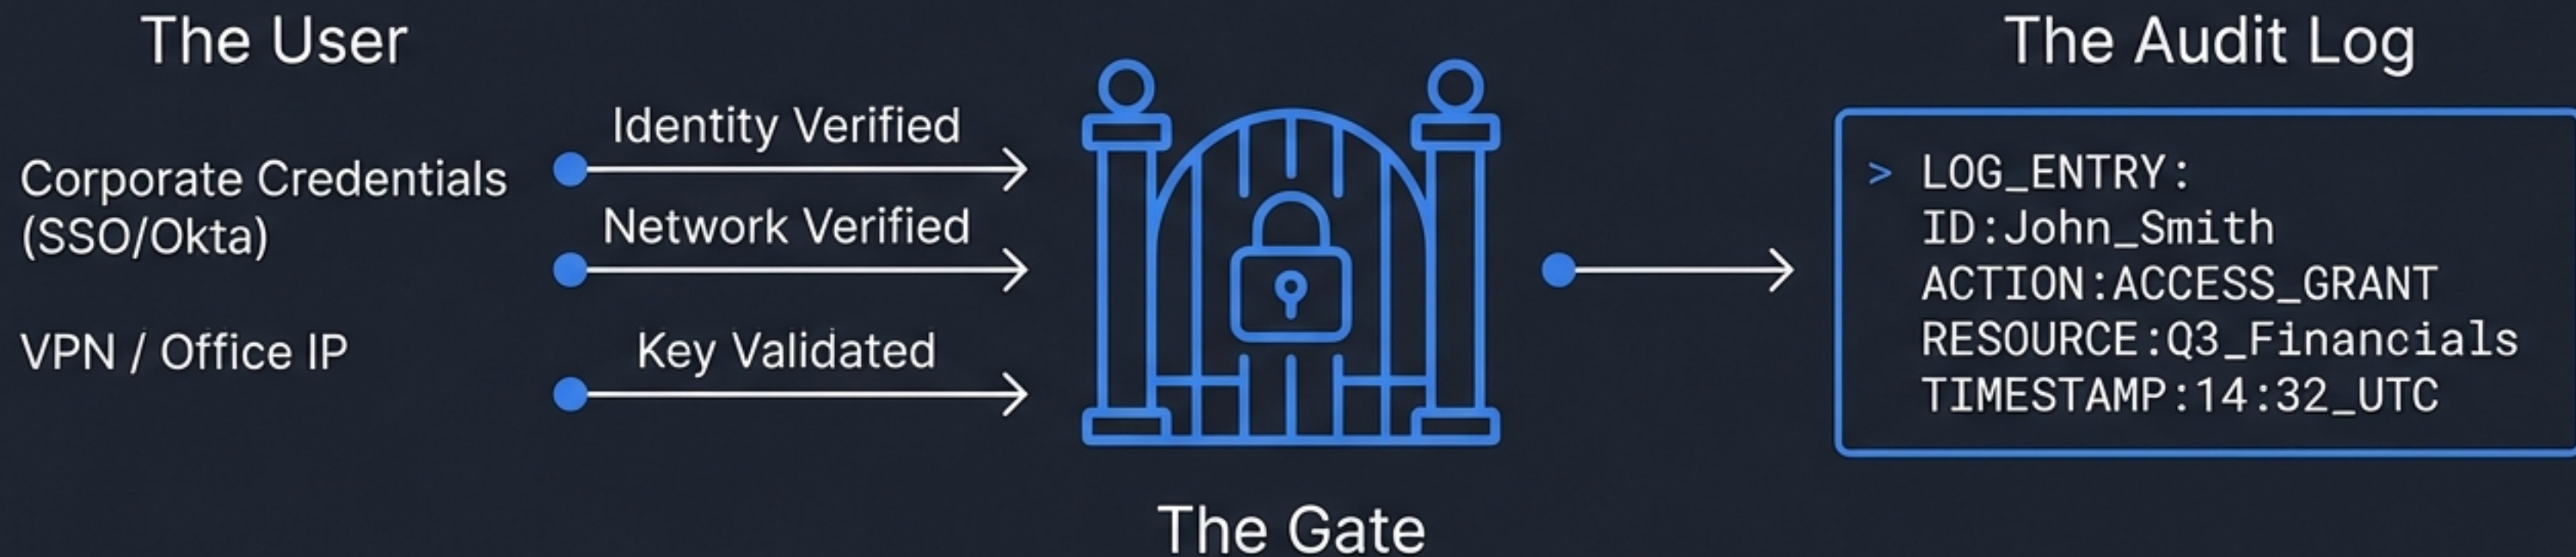

White-Label

Complete removal of SG/Send branding. Your product entirely.

Pillar 5: Enterprise Governance & Identity

Transitioning from Key-based to Identity-based security.

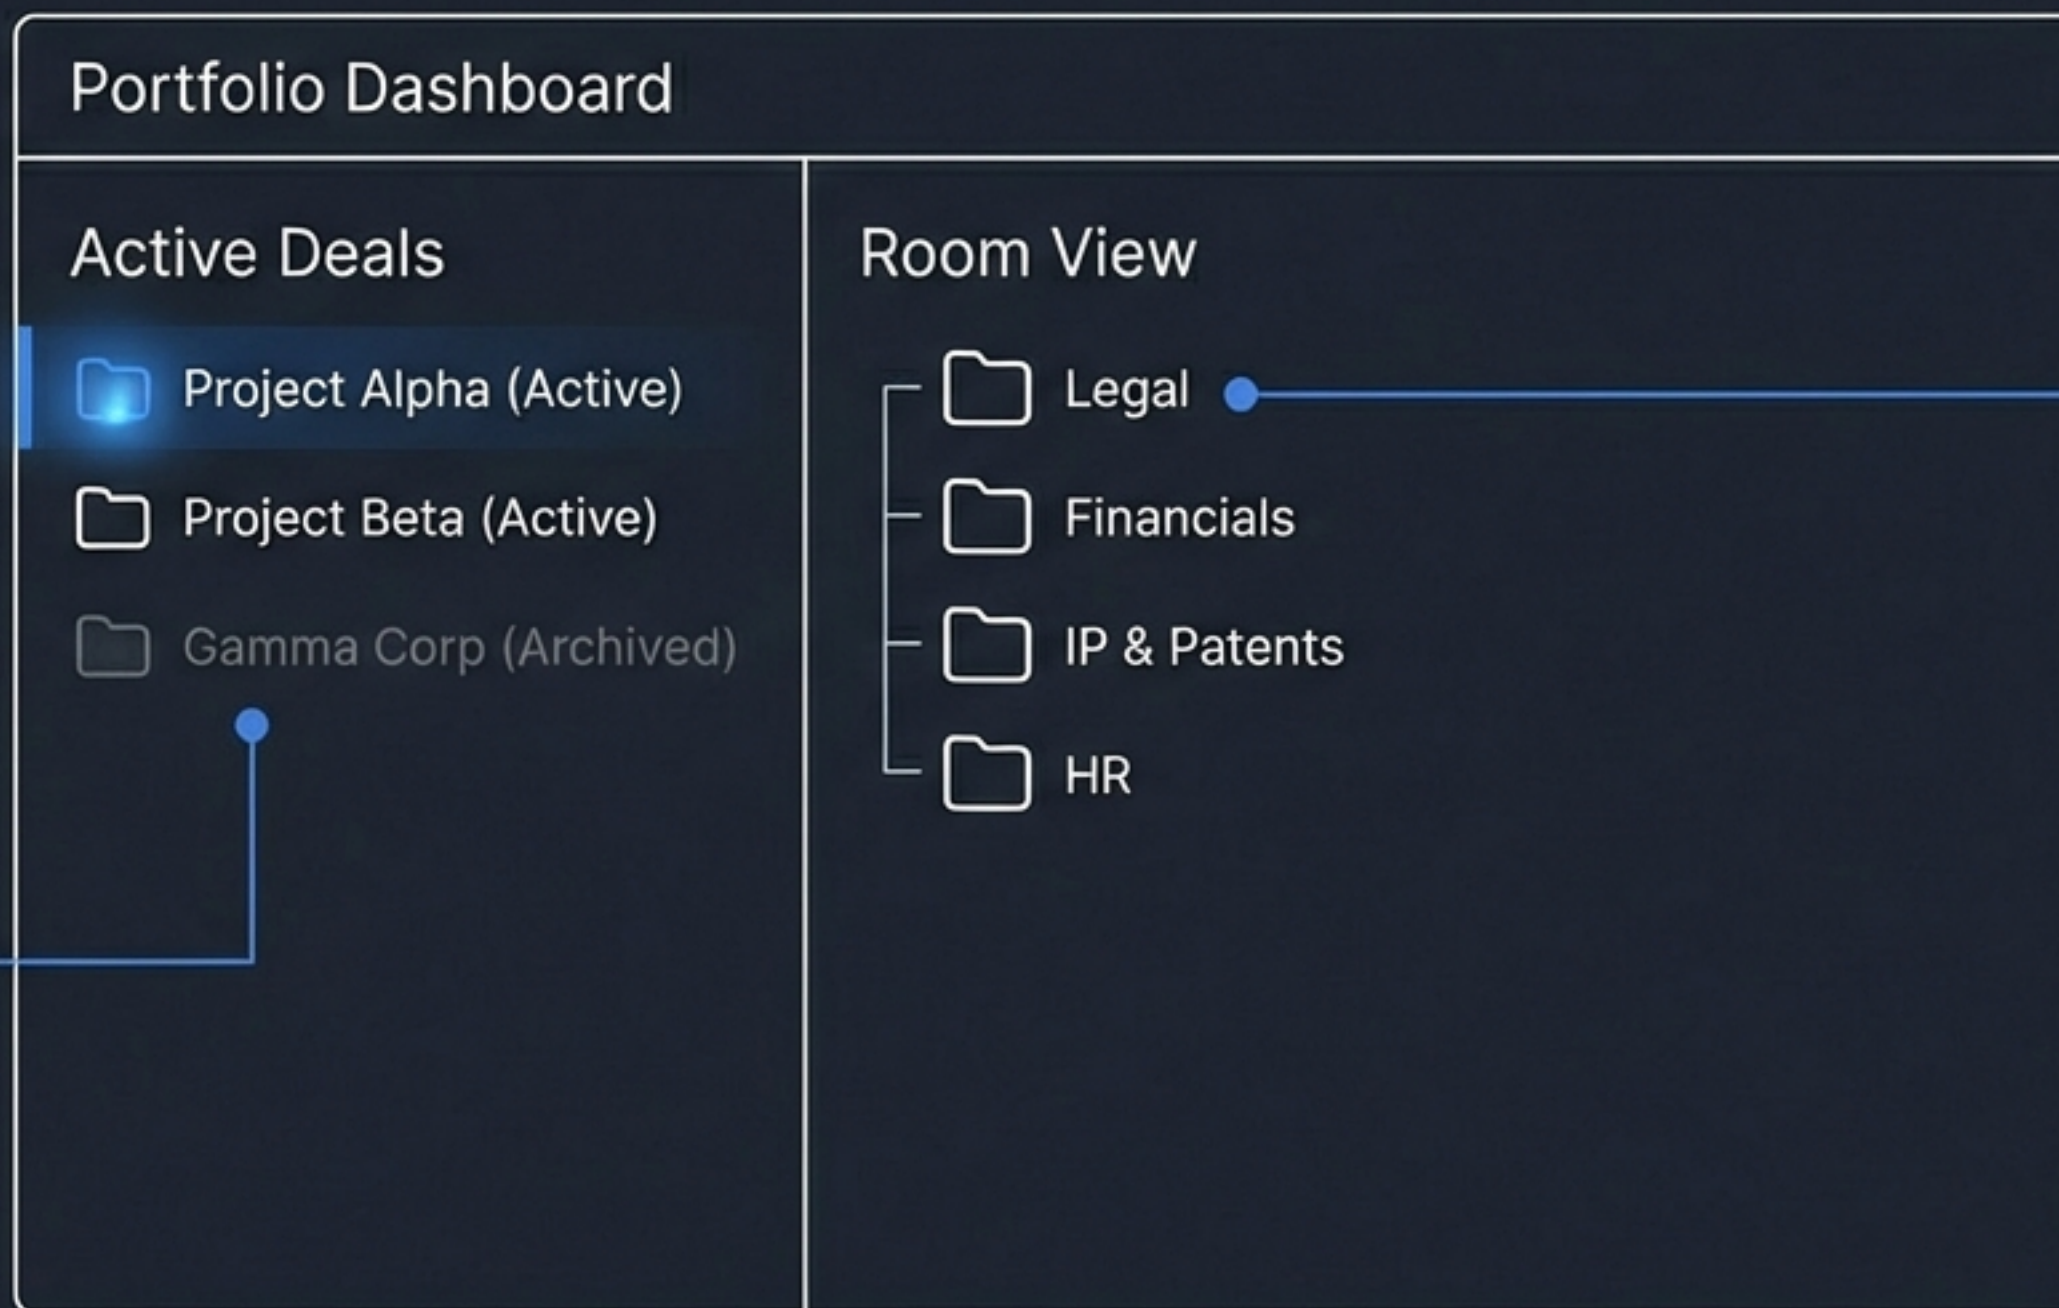

Move from anonymous access to named logs.

The New Data Room Experience

Moving from flat S3 buckets to structured, managed environments.

Multi-Room Management:
Dashboard view for 15+ portfolio companies.

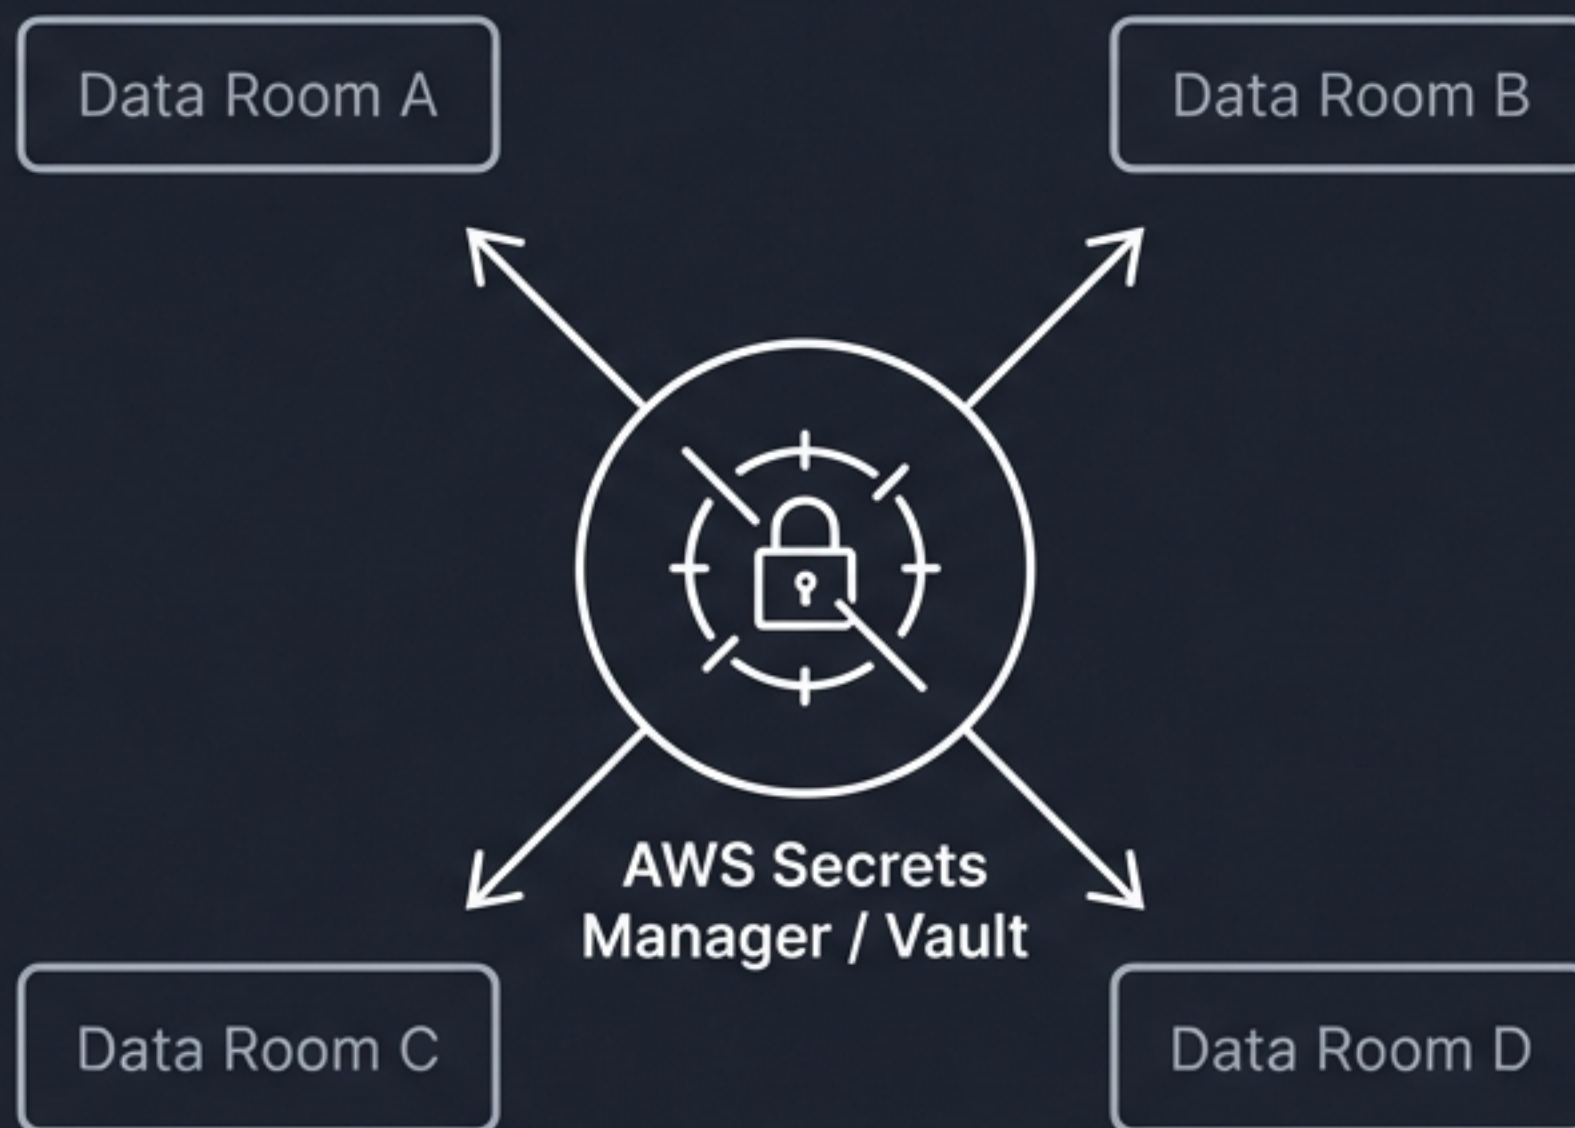

Structured Rooms:
Categorise by document type.

Infrastructure: Professional Key Management

Eliminating spreadsheets. Centralised, versioned, audited key storage.

Centralisation: All keys in one **auditable place**.

Rotation: Change keys without re-encrypting data.

Resilience: **Versioned**, backed up, and recoverable.

Separation: Keys stored apart from encrypted data.

Workflow Spotlight: The M&A Transaction

A structured, secure process from setup to close.

Workflow Spotlight: Board & Portfolio Mgmt

Scenario A: The Board Meeting

- **Time-Limited:** Board pack available for 7 days, then expires.
- **Insight:** See who read the pack BEFORE the meeting.

Scenario B: Monthly Reporting

- **Automation:** Portfolio companies upload via Public Key.
- **Access:** Analytics team automatically notified.
- **Archive:** Historical reports stored in searchable room.

Implementation Pathways

Engineering is done; configuration is ready.

Standard Release

- Wait for general rollout (Weeks)
- Includes: Basic tracking, PKI support

Professional Services (Available Now)

- Dedicated Deployment: Same day ➔
- Co-Branding: 1-2 days
- IP Restrictions: 1-2 days
- Cognito/SSO: 1-2 weeks
- Secrets Manager: 1-2 weeks

Defining Your Security Posture

Start Simple

Use v0.4.3 today. Secure, isolated, and ready.

Go Pro
