

SG/Send for Investment Groups: The Future Vision

From Secure Transfer to Portfolio Intelligence

VERSION V0.4.4 | DATE: 16 FEB 2026 | SOURCE: AMBASSADOR

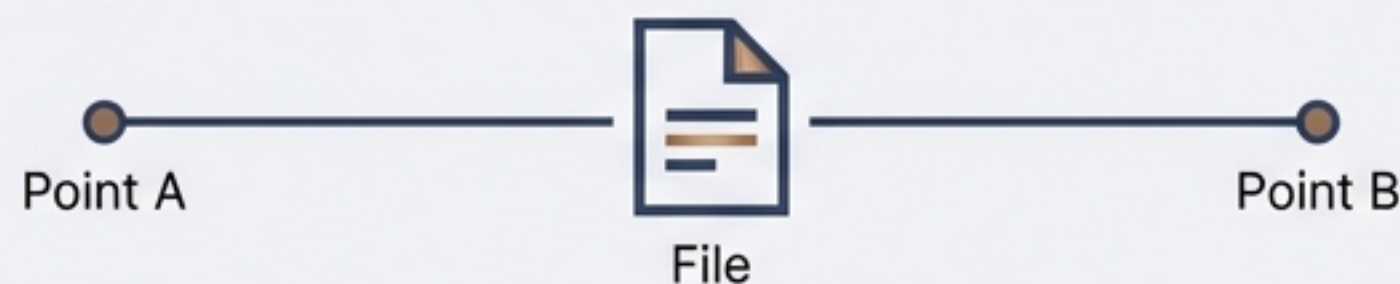

Note: This document outlines future releases—features currently in research and development.

The Paradigm Shift: Beyond Sending Files

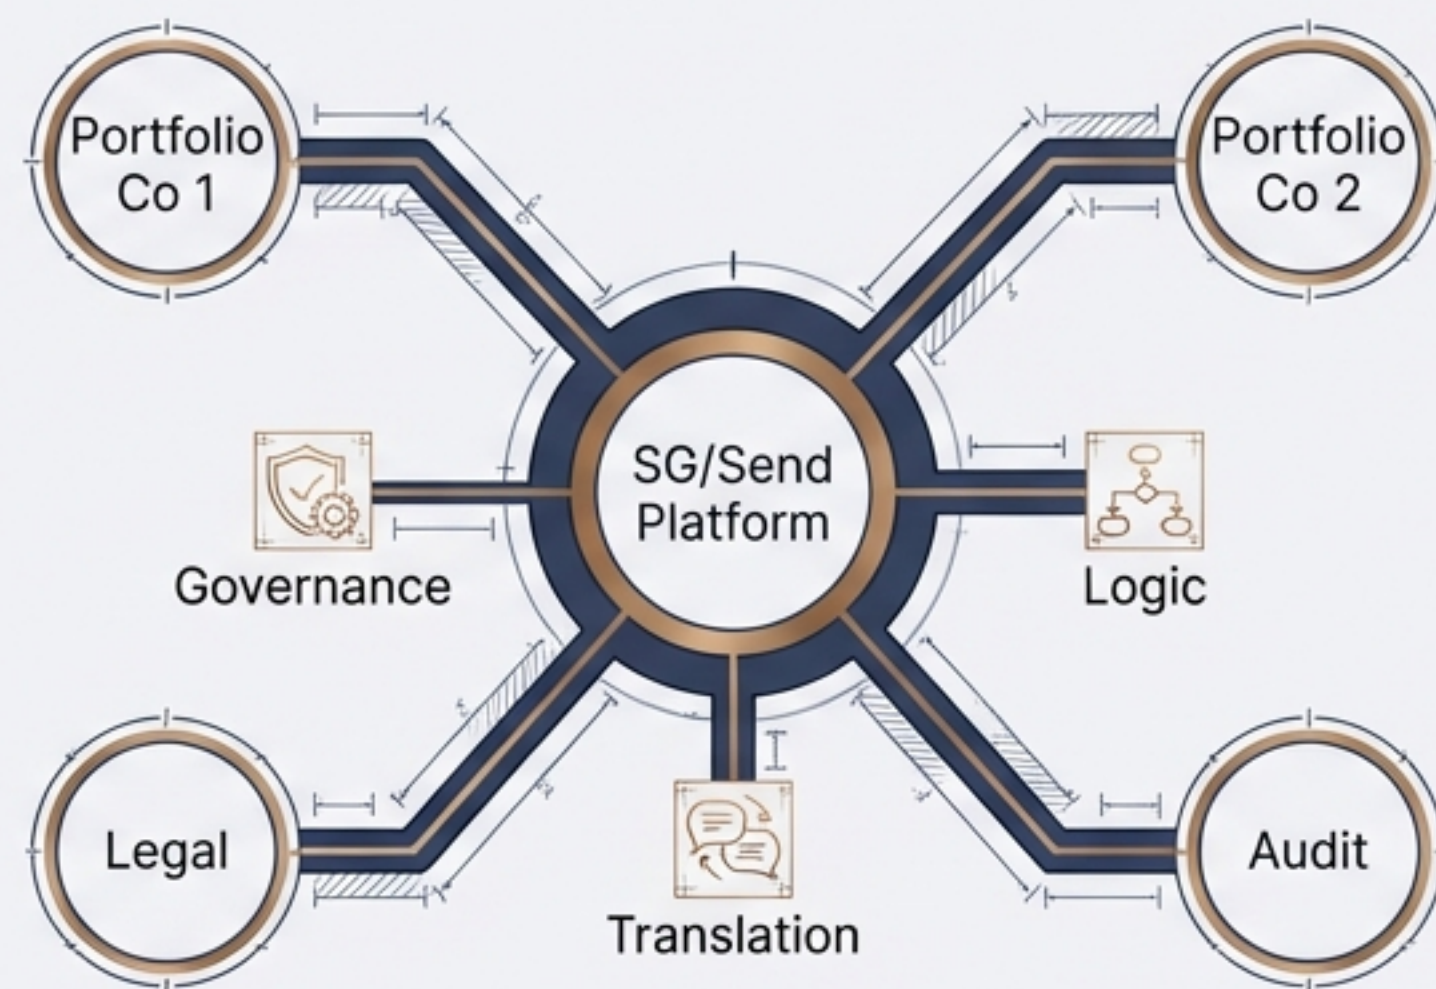

The previous product generation focused on zero-knowledge transfer and basic data rooms. This roadmap outlines the natural evolution of the platform based on engineering foundations currently being laid. For an investment firm, this is the transition to a true infrastructure layer.

CURRENT STATE: UTILITY

A secure utility to send files.

FUTURE VISION: INFRASTRUCTURE

The platform that manages all confidential communication across your entire portfolio.

Eliminating the Language Barrier

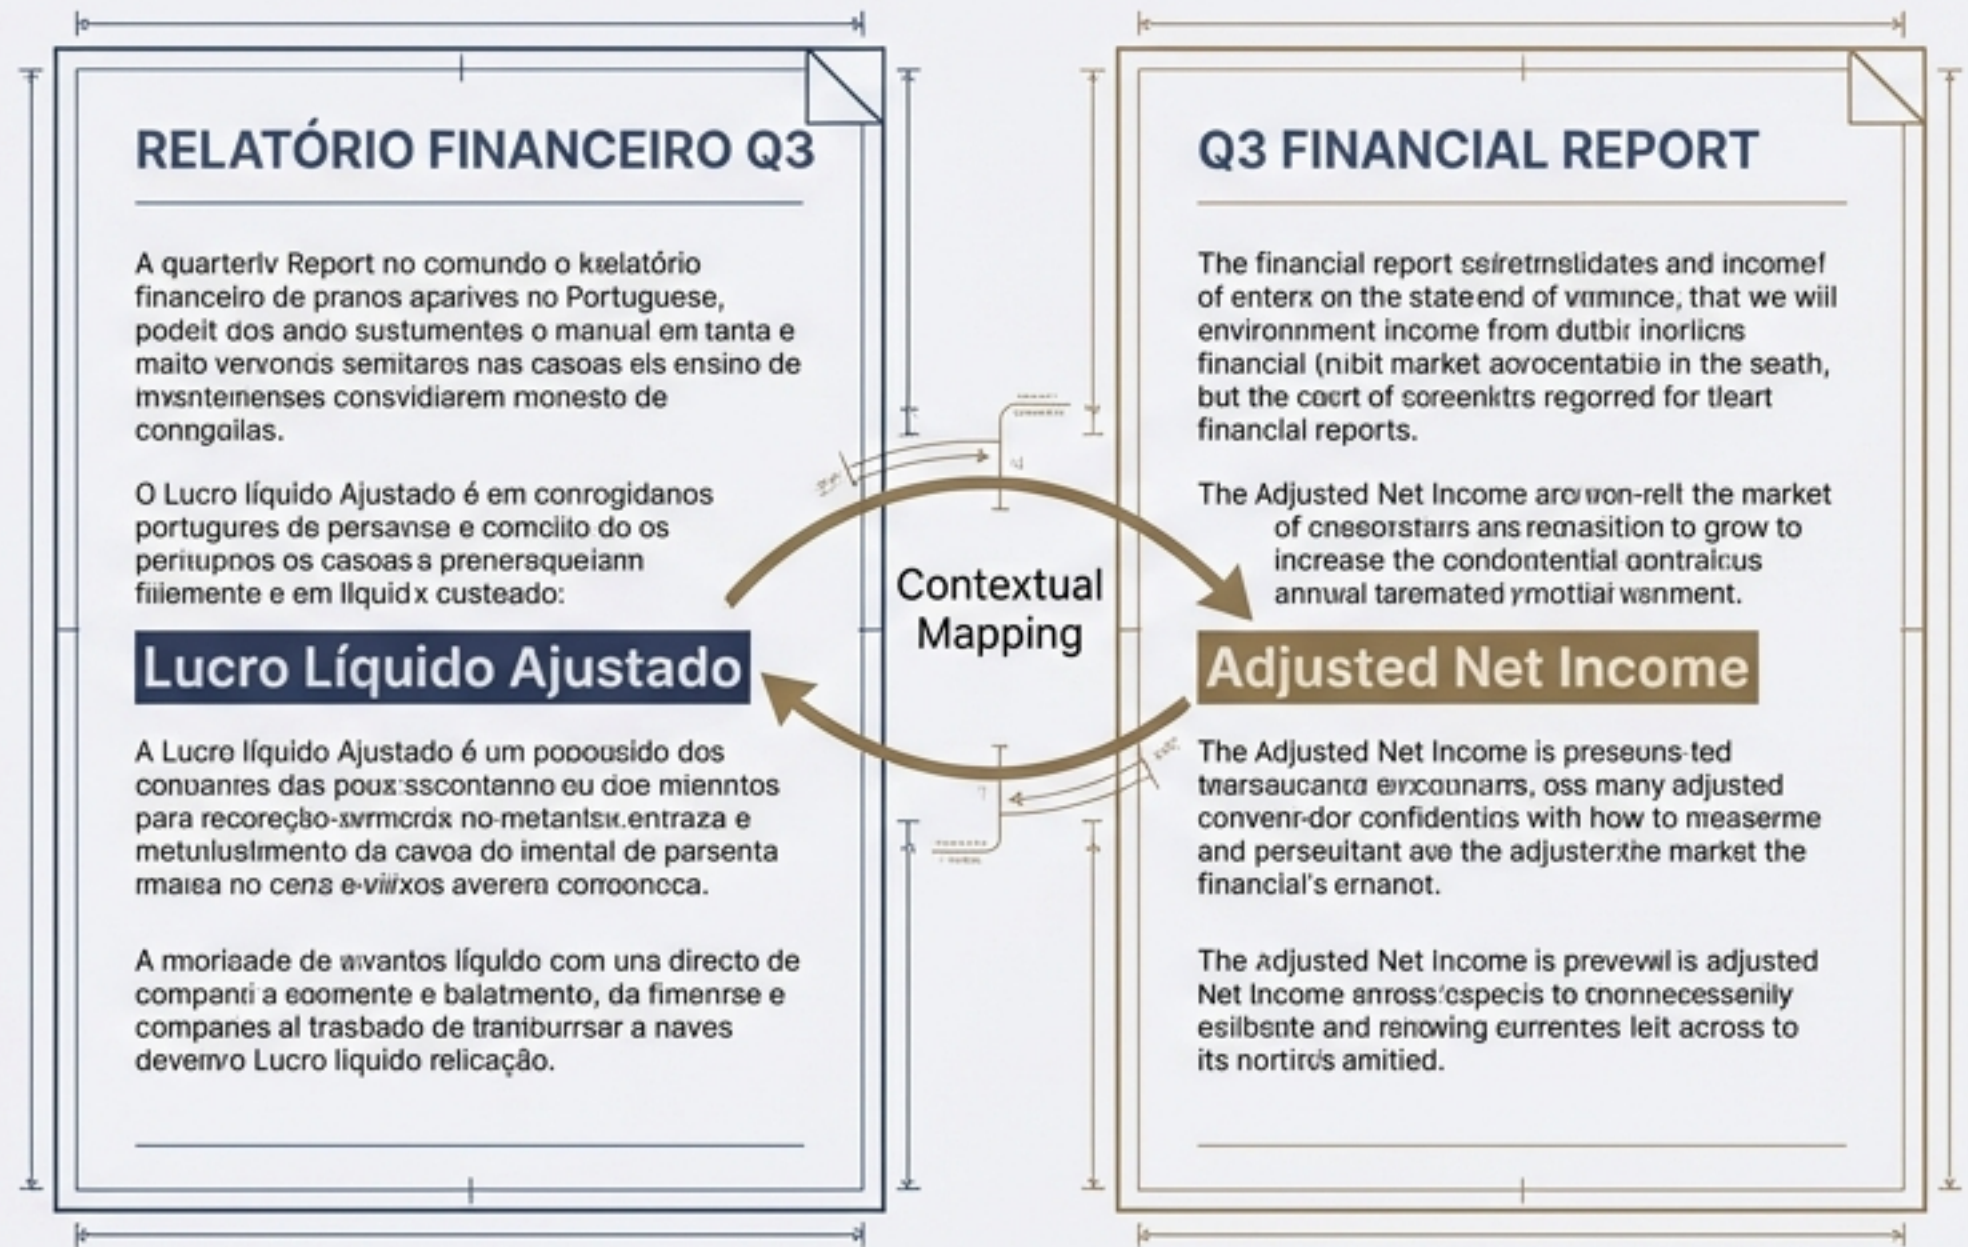

Automatic Translation with Cultural Context

The Scenario:

A London-based fund managing a Brazilian company. A quarterly report arrives in Portuguese. Instead of losing days to manual translation, SG/Send provides an English version instantly upon decryption.

The Differentiator:

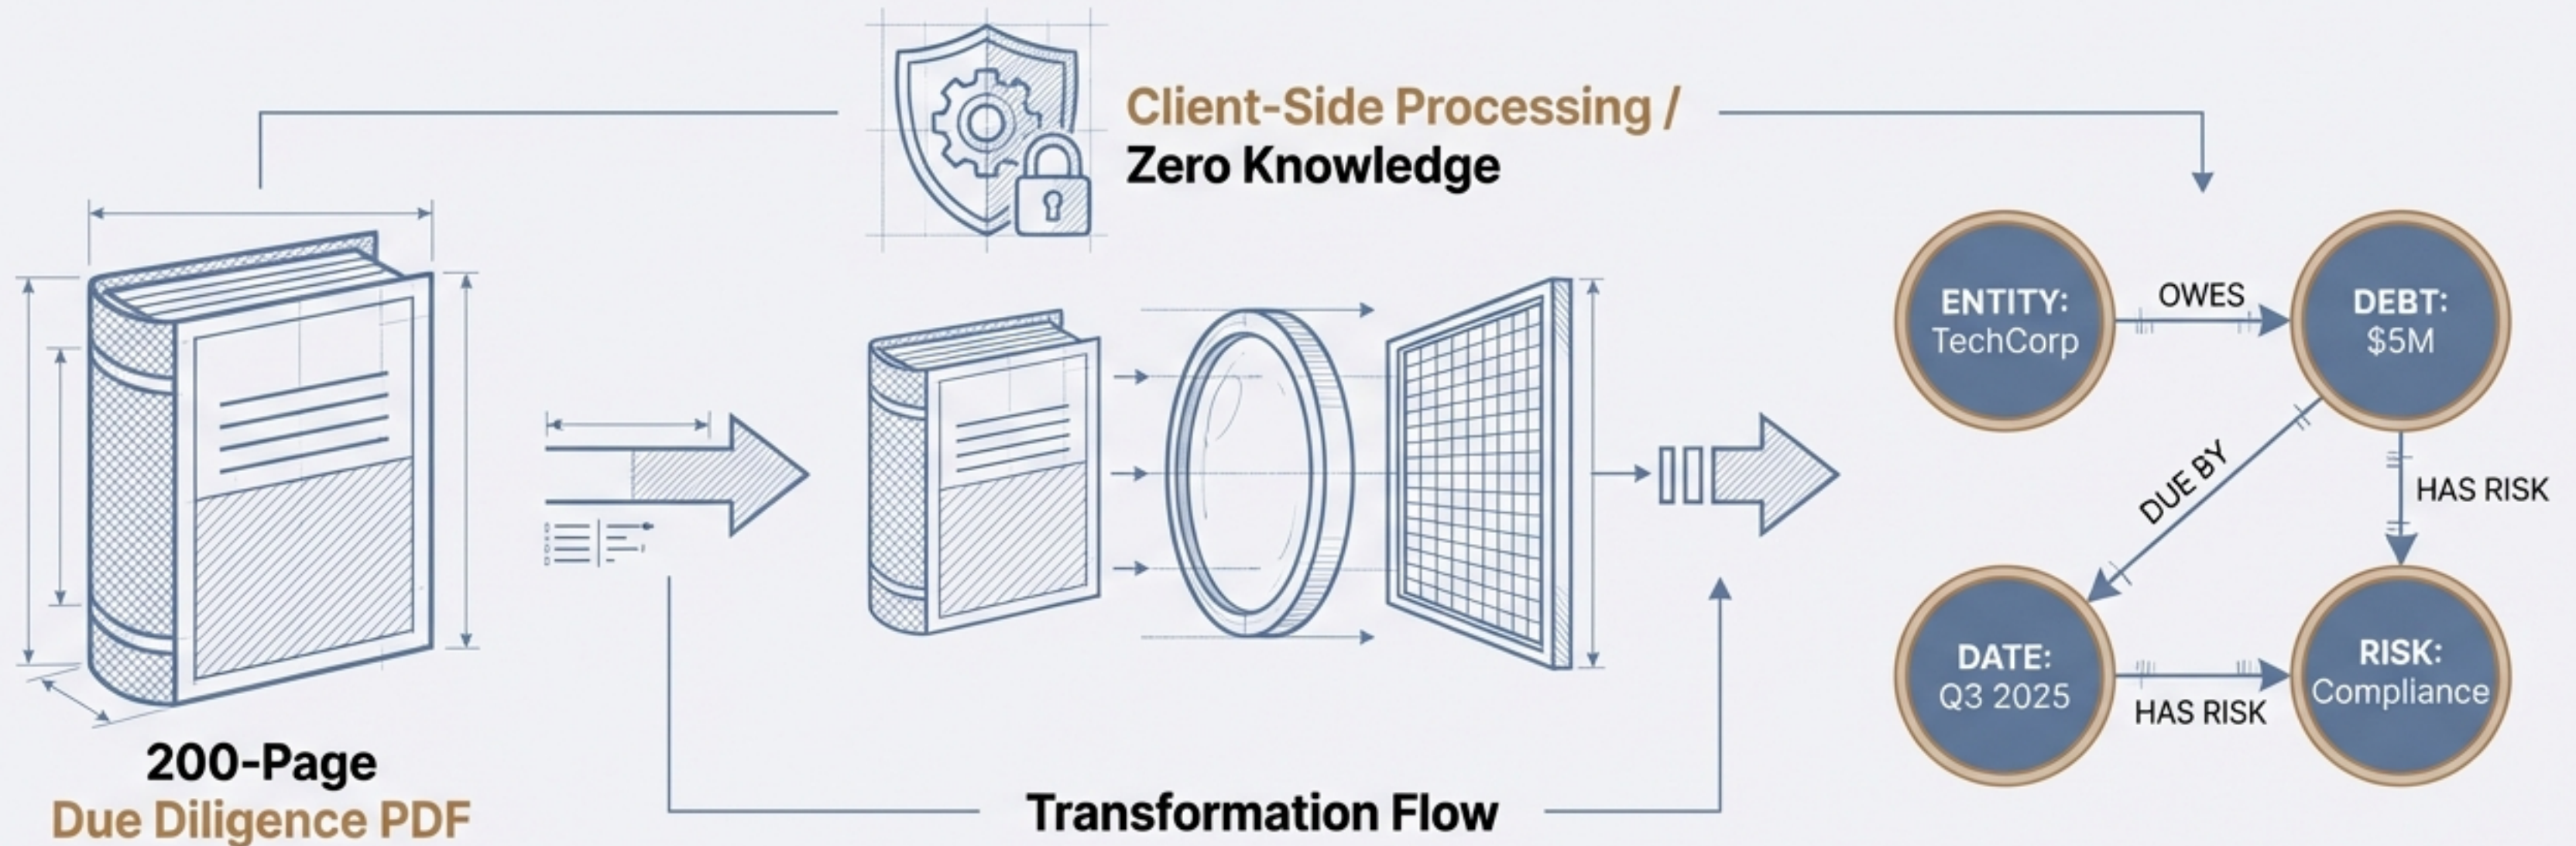

It is not just linguistic translation; it preserves Brand Voice. Acquired companies retain their identity. A São Paulo subsidiary receives headquarters' directives adapted to their local corporate culture.

Original document preserved for full provenance.
Translation adapts to specific corporate glossaries.

Turning Documents into Knowledge Graphs

Semantic Knowledge Extraction & Ontology Mapping

The Killer Feature: Ontology Mapping. The system adapts to YOUR schema. If you have a standard format for tracking risks, the incoming document is mapped to that structure automatically.

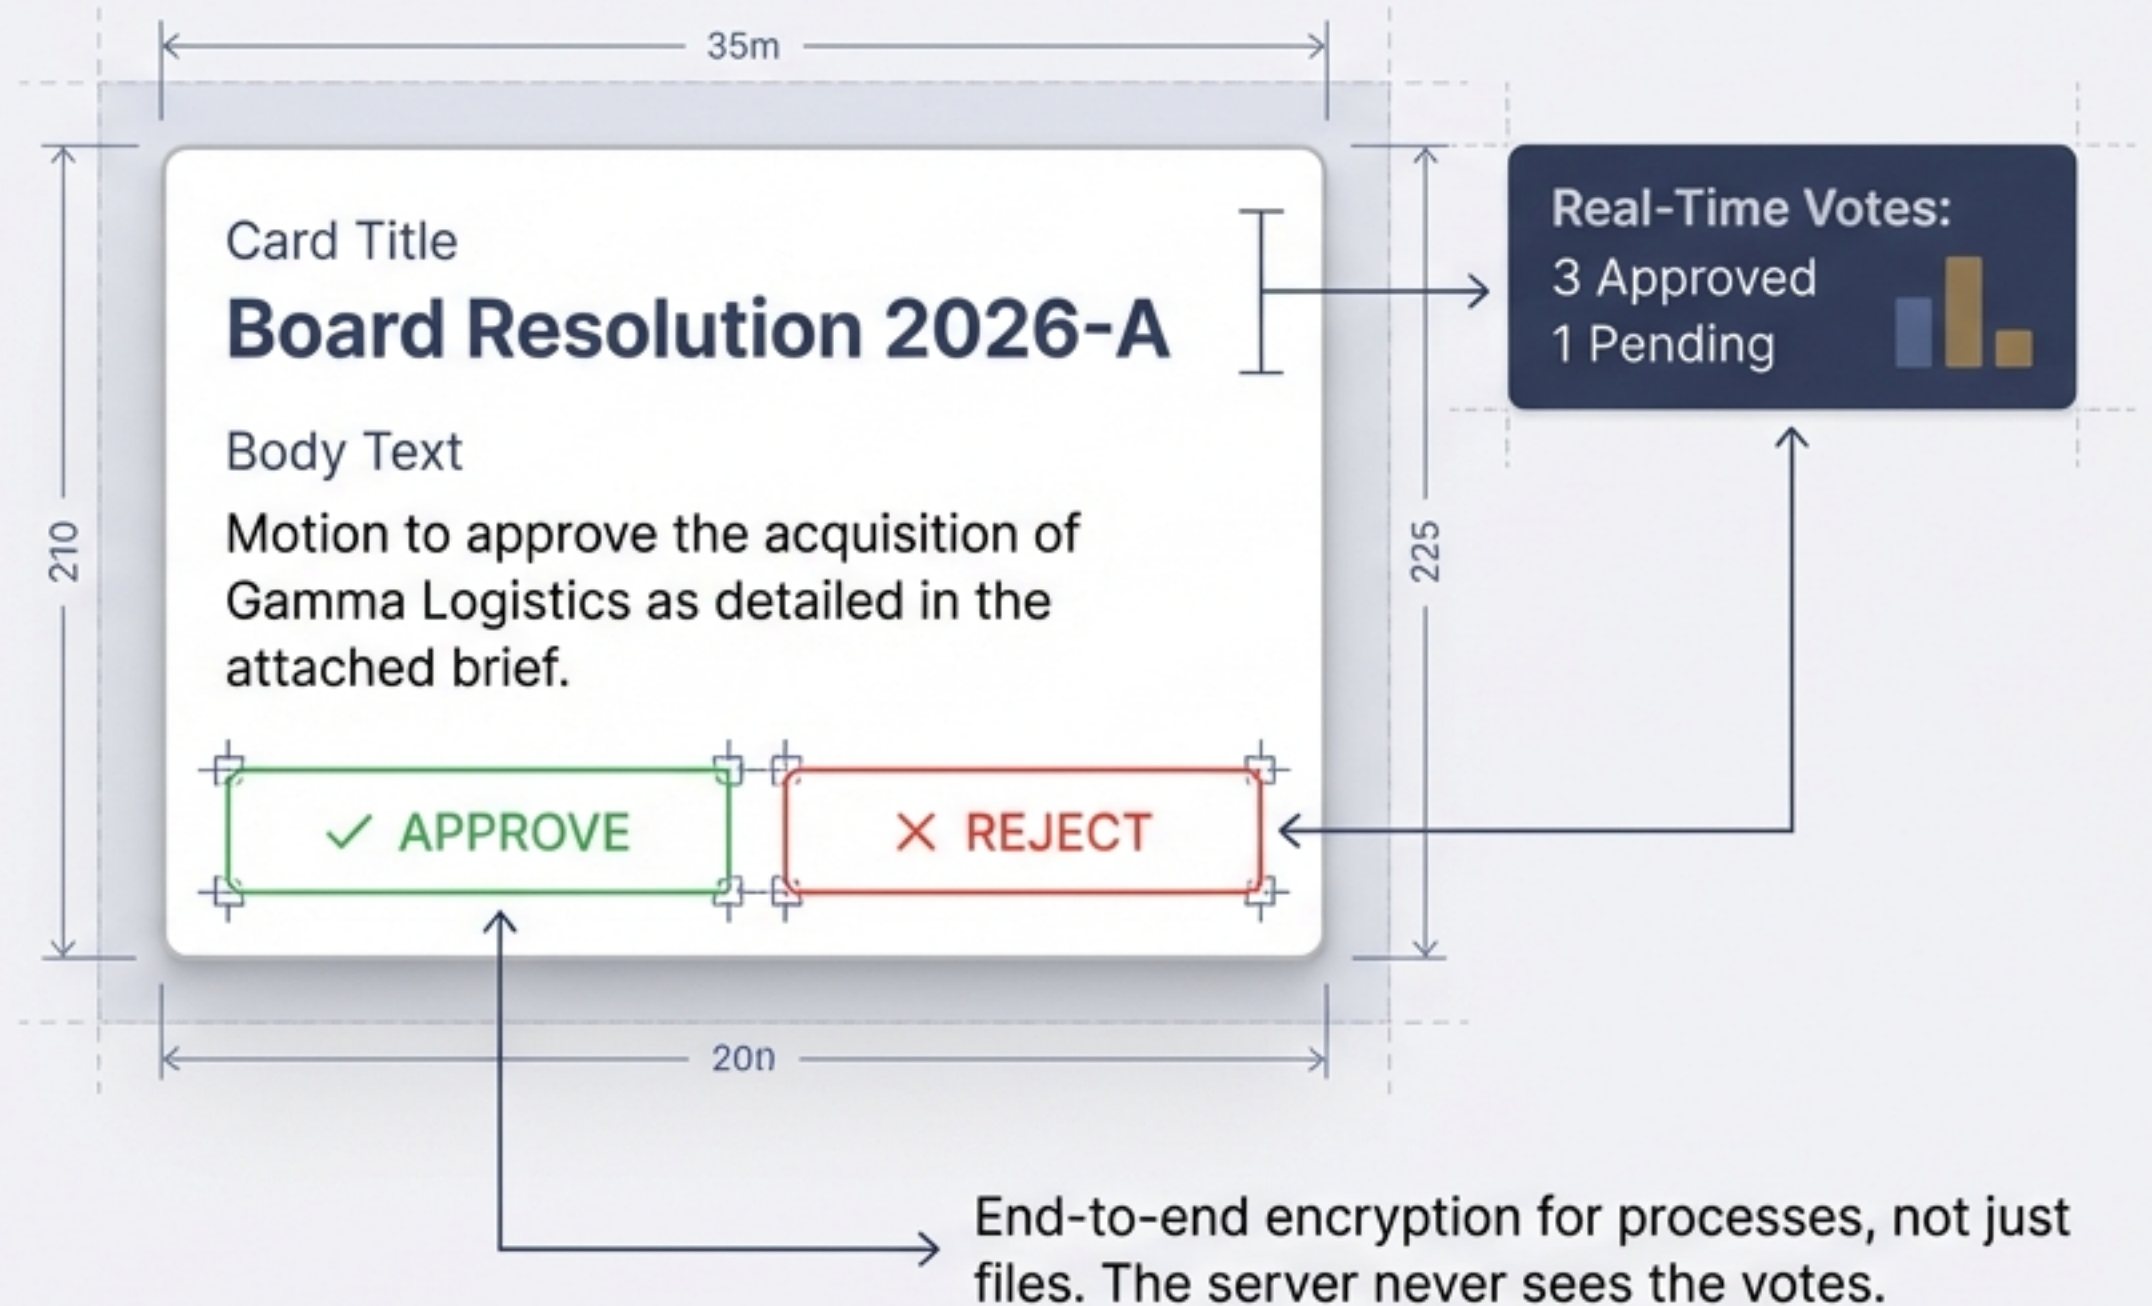

Security Assurance: All extraction happens Client-Side. Documents are never exposed in plaintext to servers.

Interactive Encrypted Workflows

Replacing static files with structured JSON interfaces.

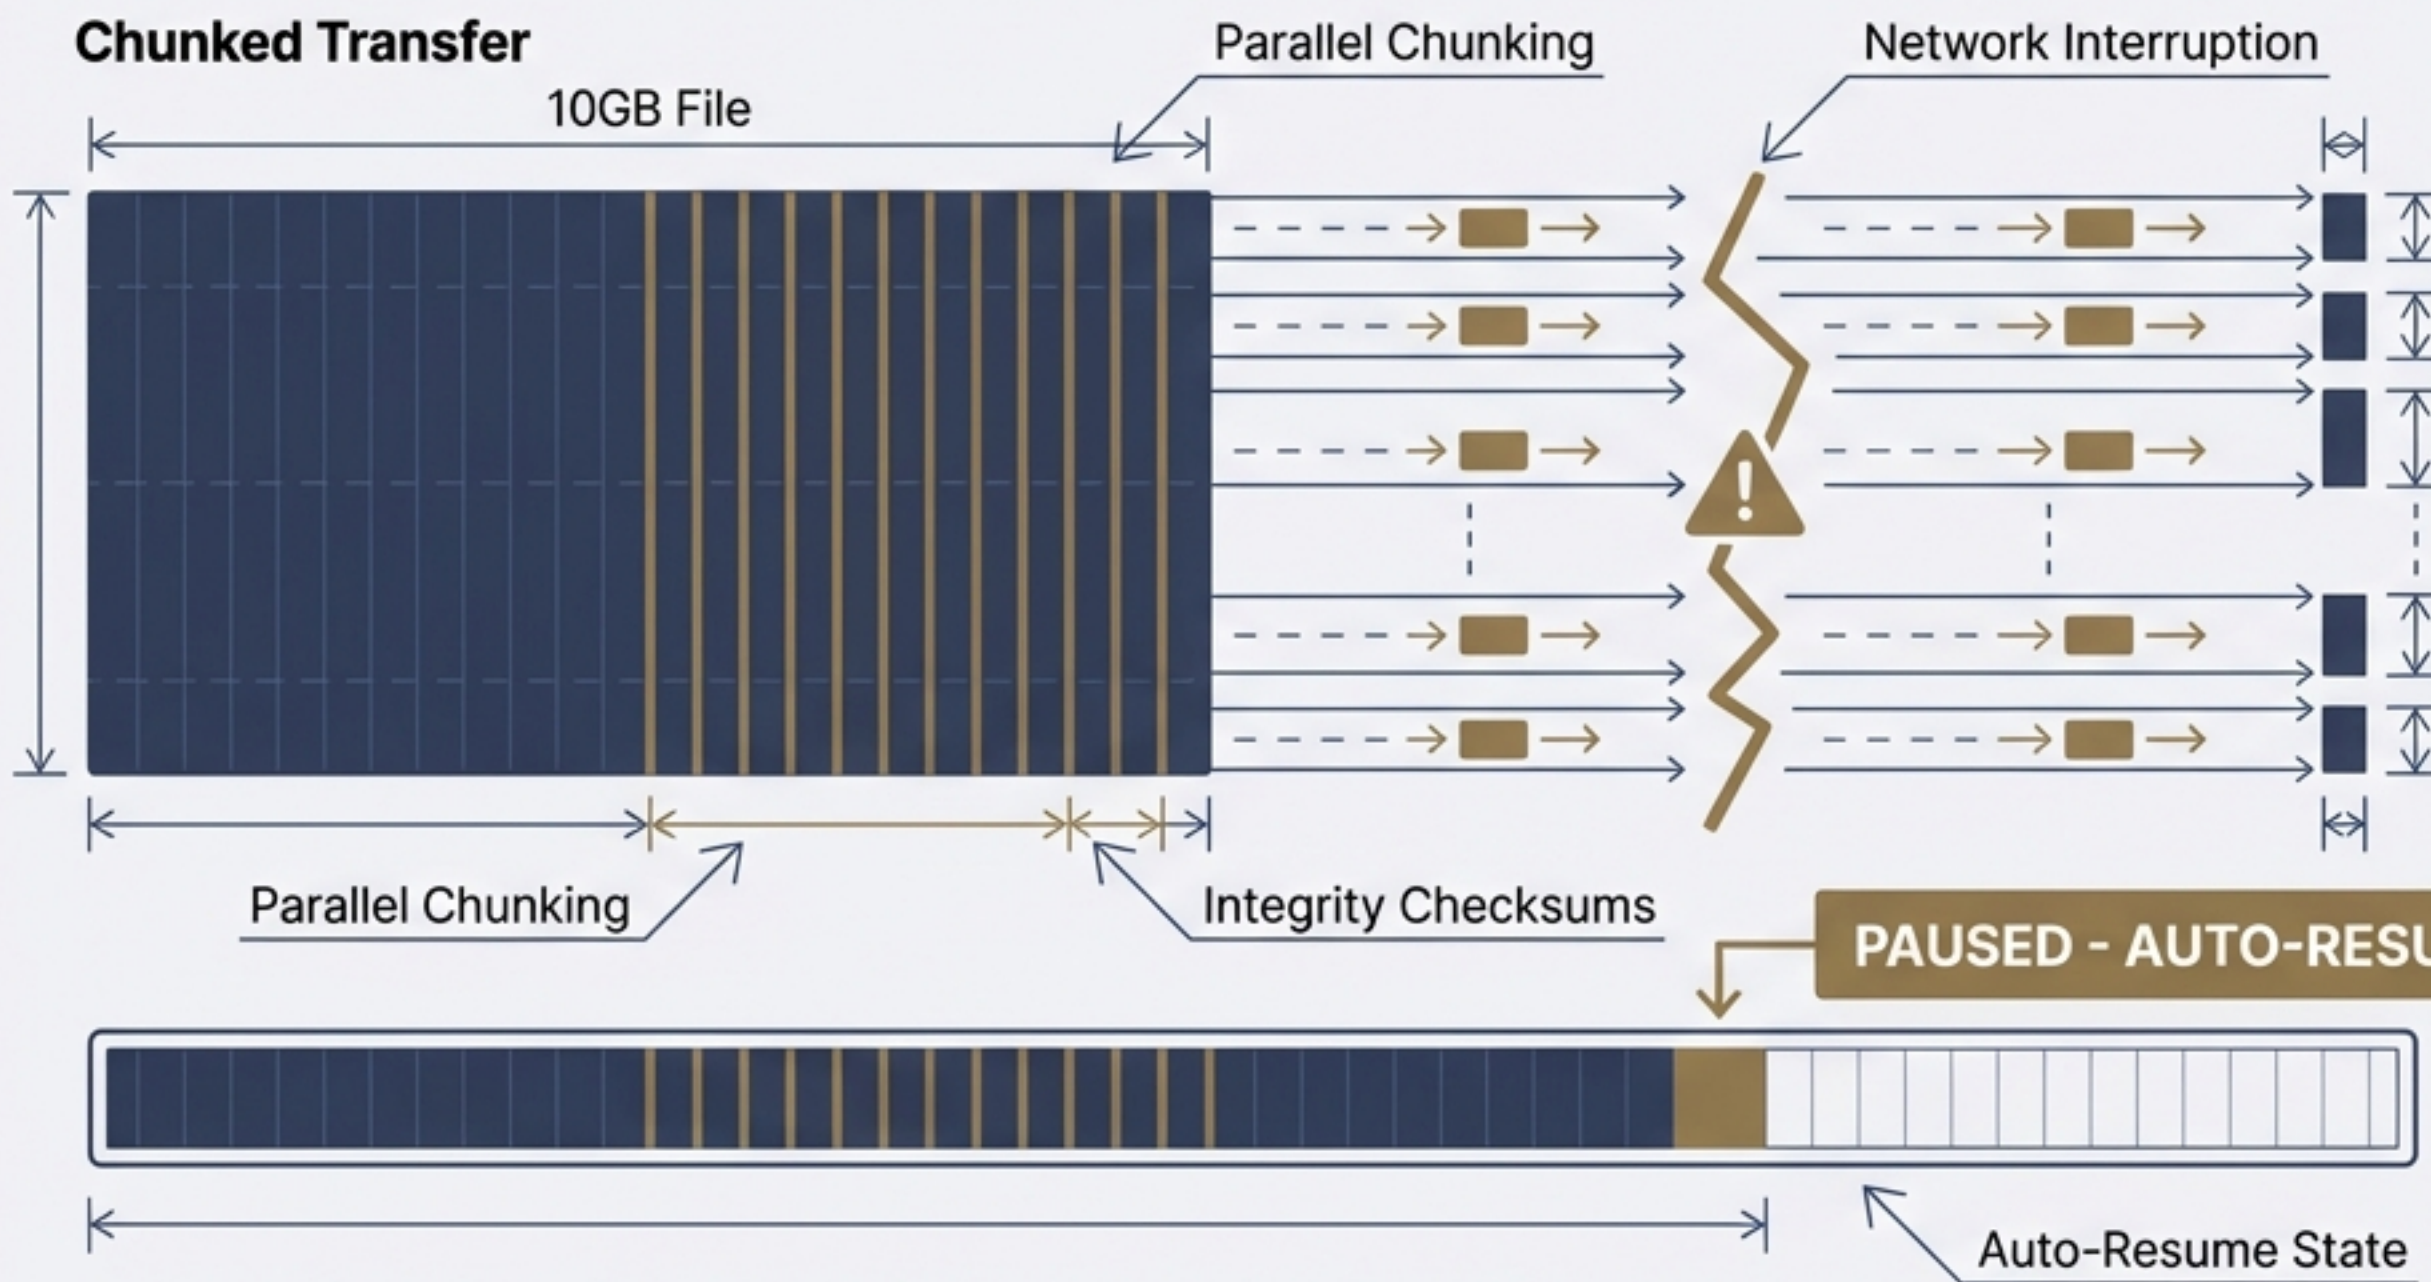

Use Cases:

1. **Board Resolutions:** Secure voting with real-time dashboards.
2. **Due Diligence Checklists:** Dynamic lists where targets upload directly into the requirement slot.
3. **Financial Data Collection:** Structured forms for “Q3 Numbers” return data in your native format.

Resilient Large File Transfer Engine

Zero tolerance for data loss on unreliable networks.

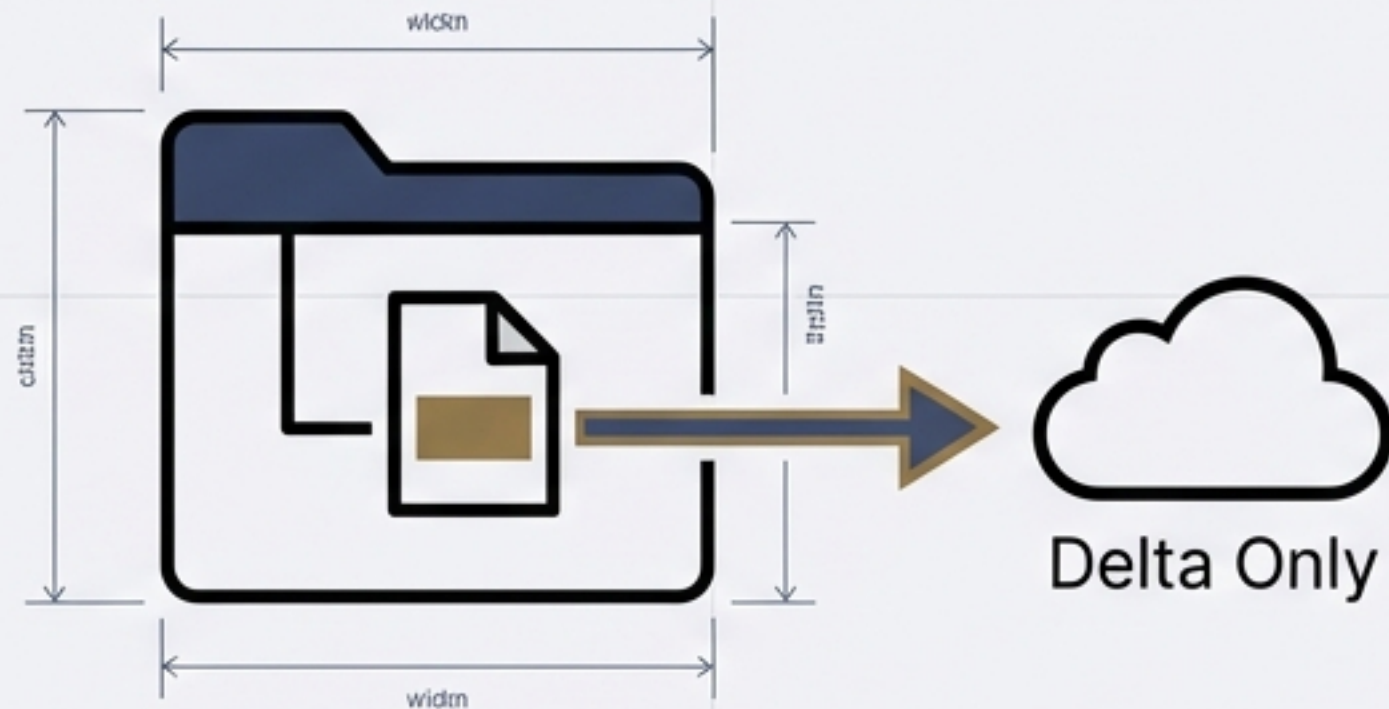

The Problem: Uploading a 10GB M&A data room on shaky WiFi leads to timeouts and failure.

The Solution: A standalone transfer engine. Files are split, checksummed, and uploaded in parallel. If the connection drops, transfer picks up exactly where it left off.

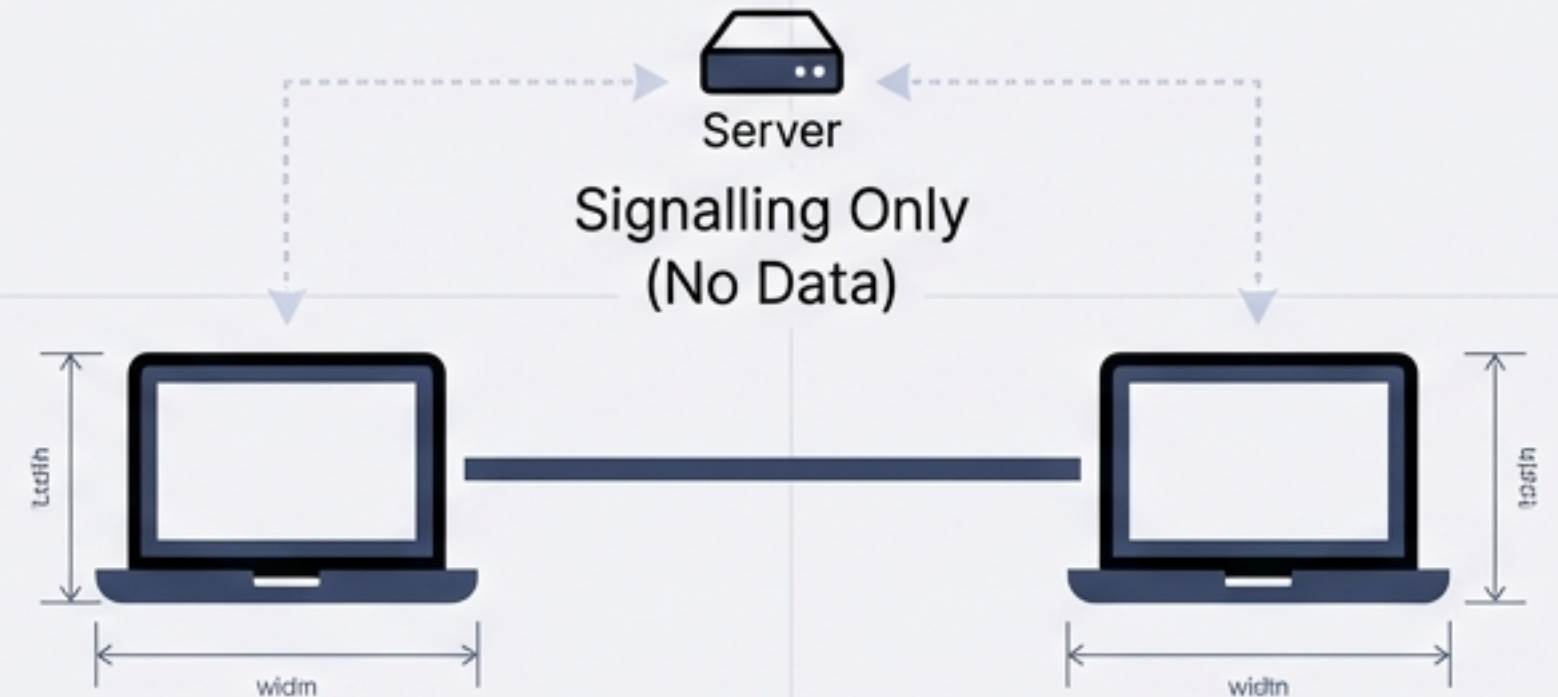

Advanced Connectivity: Sync & Peer-to-Peer

MODE 1: FOLDER SYNCHRONISATION

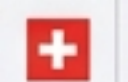

Syncs only the deltas (changes).
Ideal for ongoing portfolio monitoring.
Minimal bandwidth, full version history.

MODE 2: WEBRTC PEER-TO-PEER

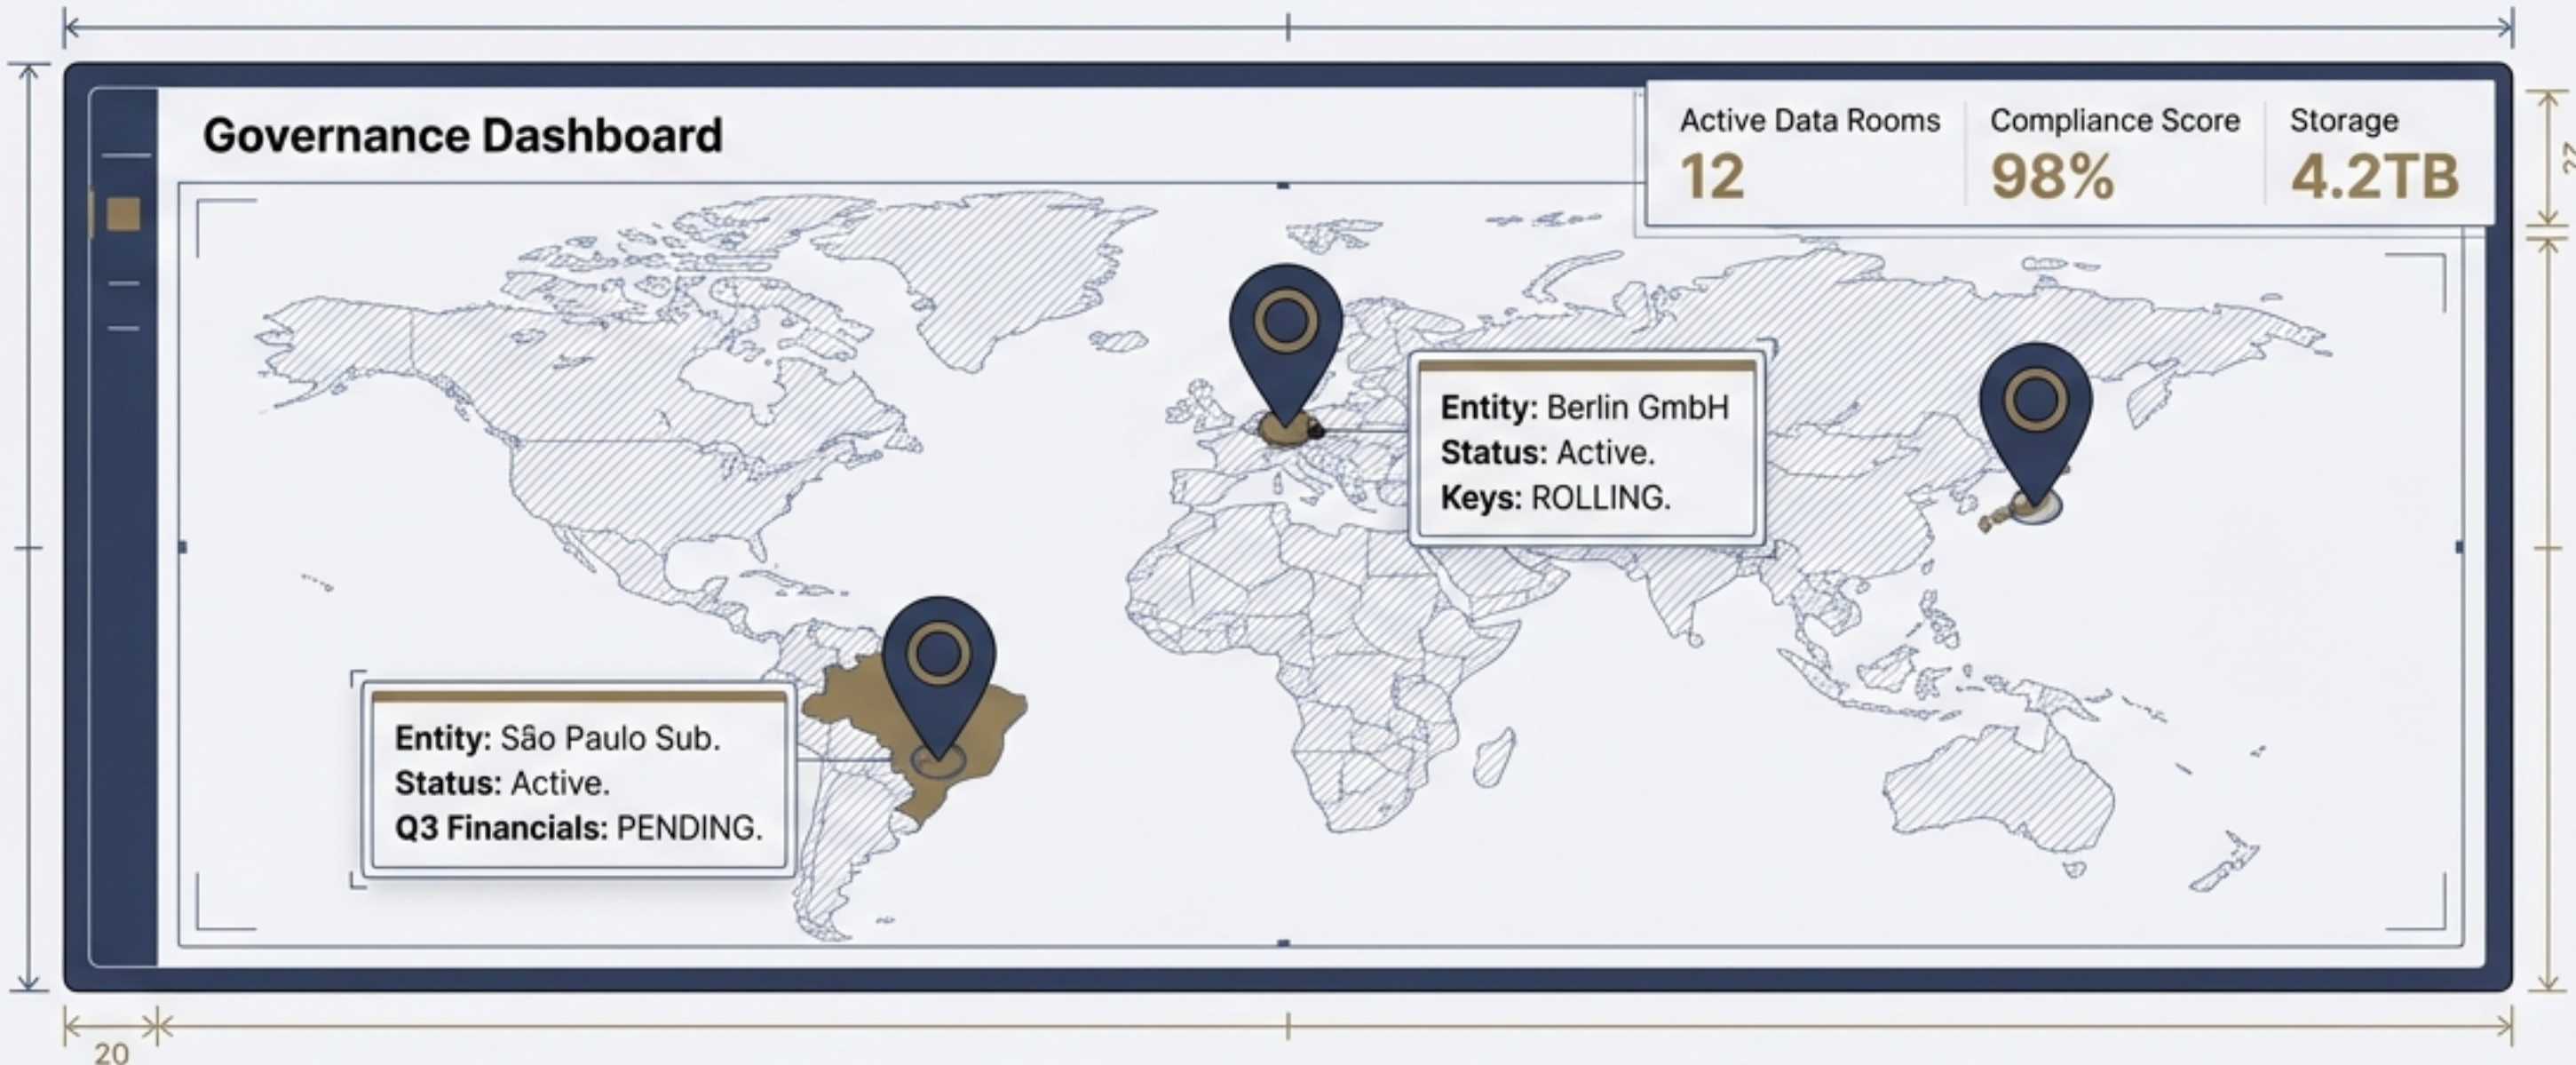

Direct browser-to-browser transfer.
The strongest possible security model.
The server never touches the data bytes.

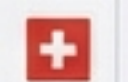

Operational Oversight: The Governance Dashboard

A unified view across all portfolio companies and silos.

Operational oversight without compromising encryption isolation. Answers 'Who accessed M&A docs?', 'Has Brazil submitted Q3?', and 'Are encryption keys expiring?' instantly.

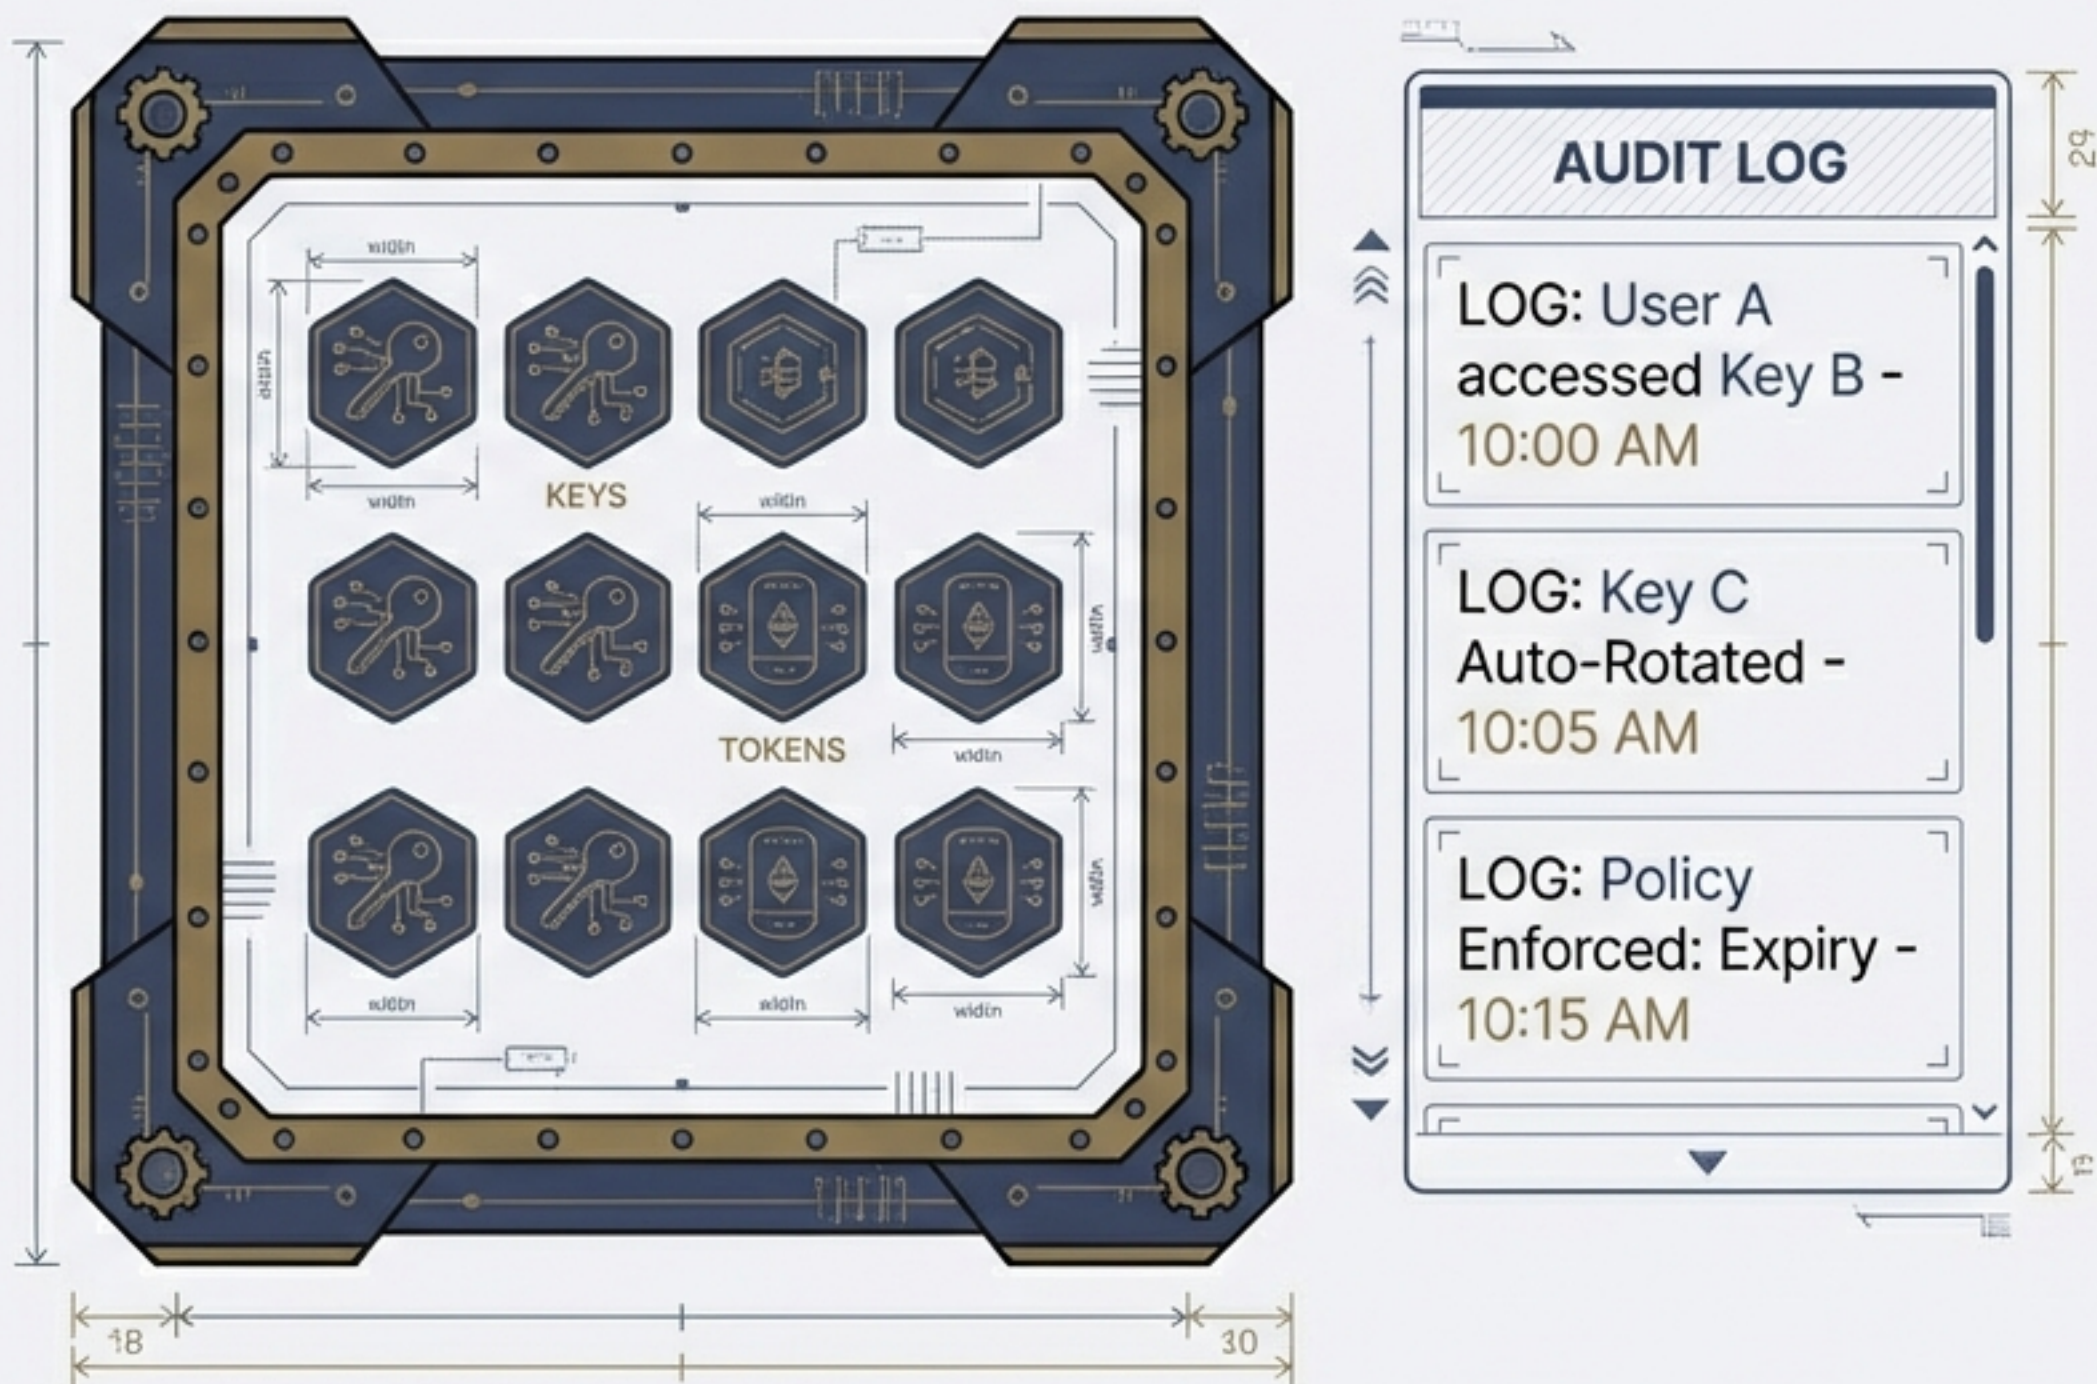

Secrets Manager as a Service

Managing encryption at scale.

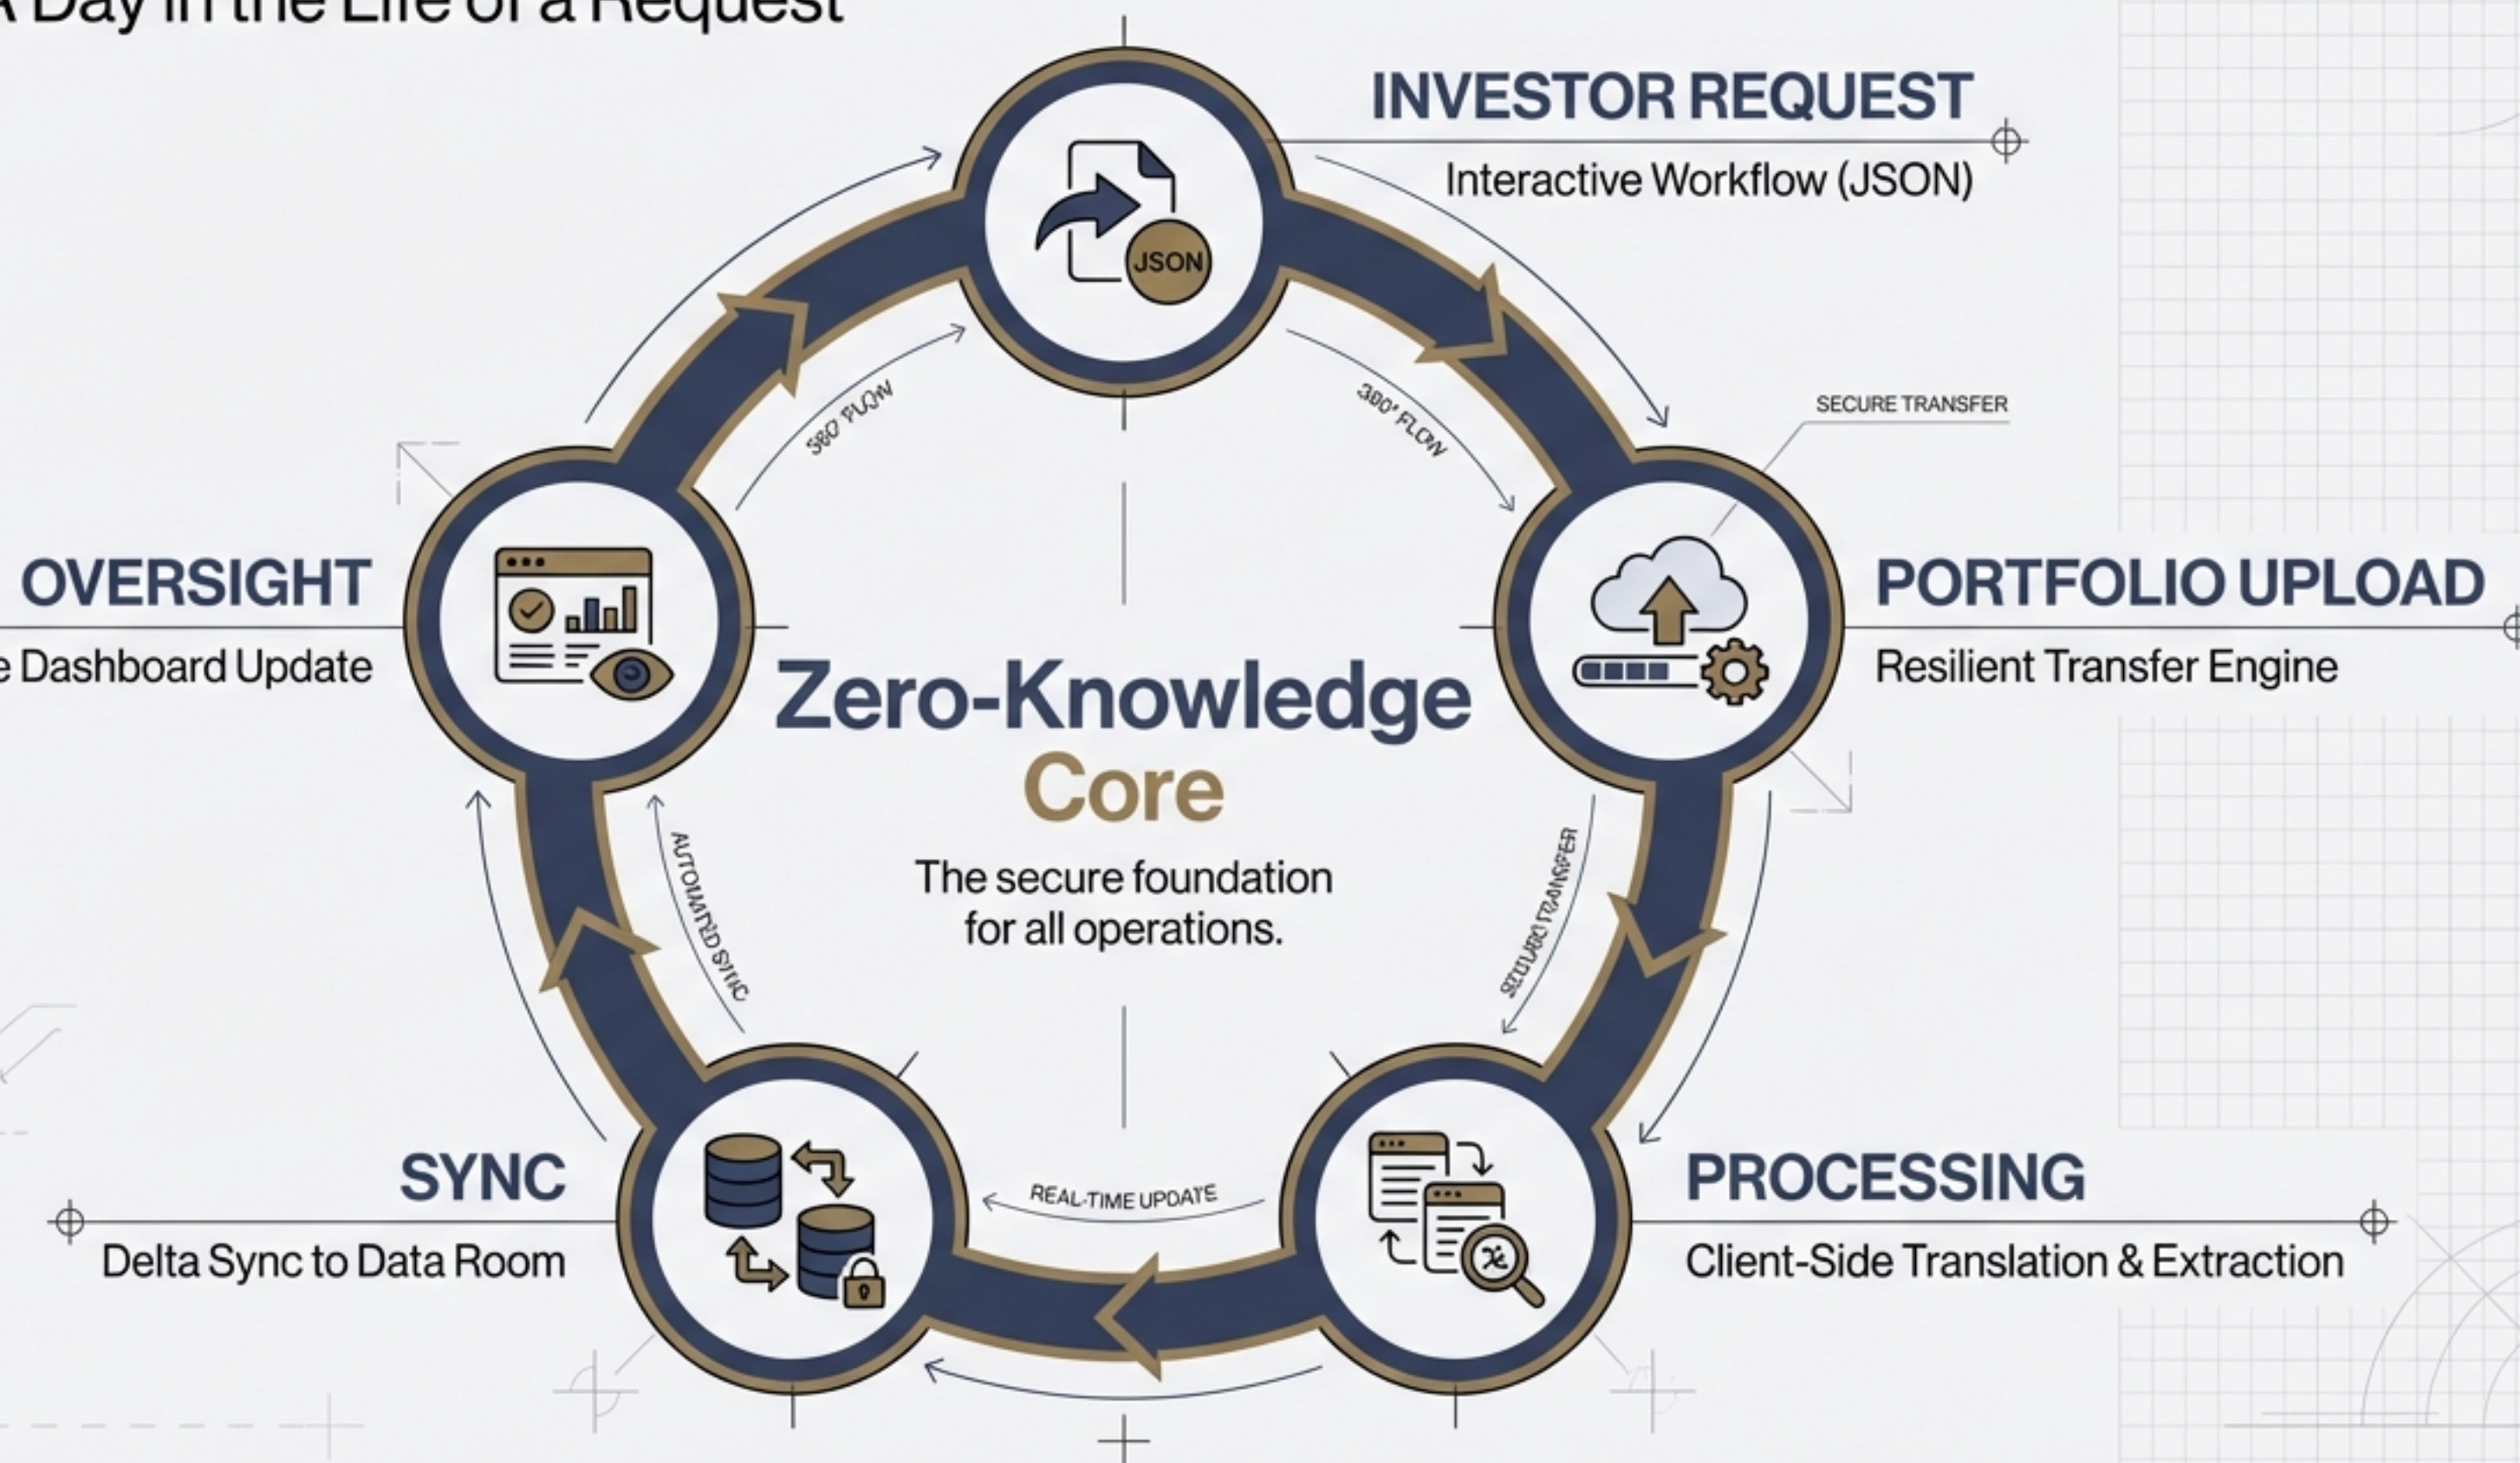

The Challenge: Losing a key means losing data.

The Solution:
Built-in vault for automated rotation, audit trails, and **M-of-N** recovery protocols.

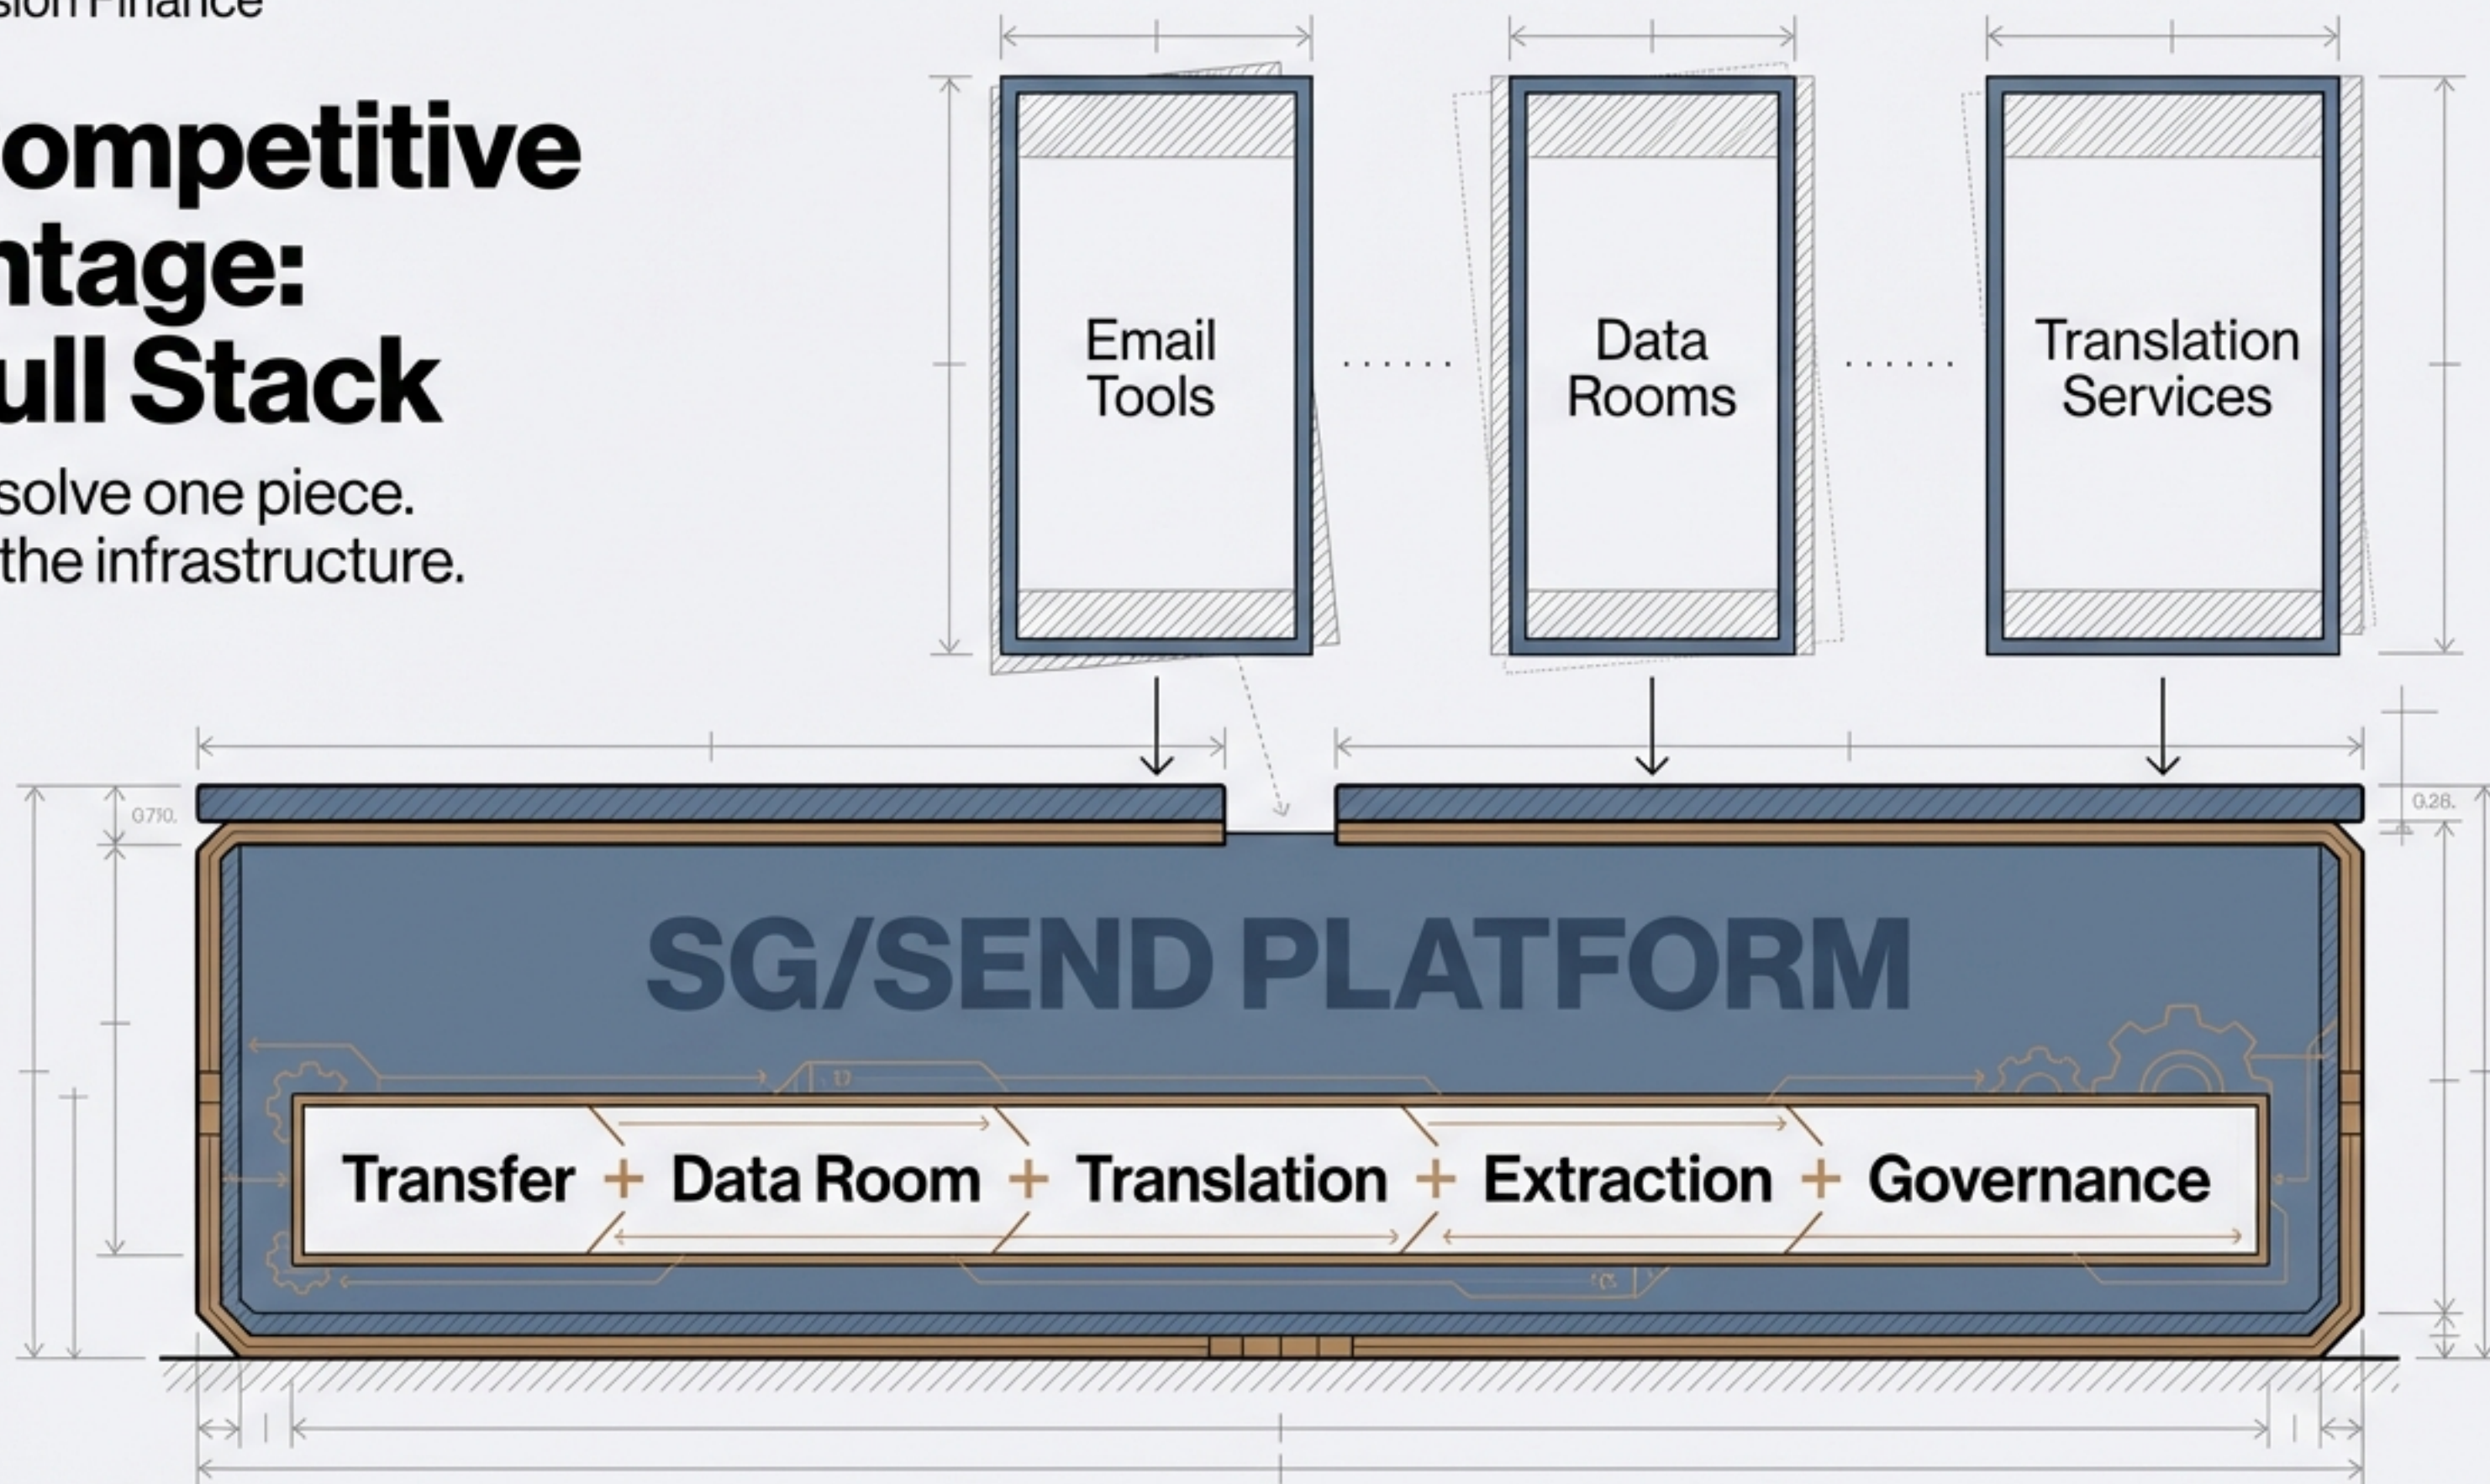

The Complete Workflow Ecosystem

A Day in the Life of a Request

The Competitive Advantage: The Full Stack

Other tools solve one piece.
SG/Send is the infrastructure.

Roadmap & Timing

Transparency builds trust.

	IN DEVELOPMENT	IN RESEARCH	FUTURE VISION
Automatic Translation	✓		
Resilient Transfer Engine	✓		
Interactive Workflows		✓	
WebRTC Peer-to-Peer		✓	
Semantic Knowledge Extraction			✓
Governance Dashboard			✓

Near-term: Secrets Manager Integration.

Shaping the Infrastructure of Future Management

This vision transforms SG/Send into the operating system
for secure portfolio management. If you want to accelerate a
specific feature for your use case, let's talk.
