

SG/Send for Accountants

**Secure Client Communication for SME Practices.
Zero Friction. Zero Knowledge.**

You are the custodian of your client's digital identity.

You don't just handle numbers; you handle the keys to your clients' lives. Daily assets include:

- Tax returns (UTR, NI numbers, income details)
- P60s and Dividend records
- Passport copies and Driving licences
- Bank statements and Director loan accounts

The current choice is between danger and difficulty.

Email & WhatsApp

Convenient but Dangerous

Data travels in cleartext.
Backups sit in uncontrolled clouds (iCloud/Google Drive).
Indefinite retention in shared inboxes.

Client Portals

Secure but High Friction

Expensive to maintain.
Clients forget passwords, ignore notifications, and revert to email out of frustration.

Physical Post

Secure but Slow

Adds days to the process.
Expensive postage costs.
Risk of physical loss in transit.

The problem isn't your commitment to security—it's that secure options are too difficult for clients.

Security that works in the browser, not behind a login screen.

SG/Send is a zero-knowledge encrypted file transfer service.

Unlike Signal or Proton, your client does not need to install anything.

- No accounts to create.
- No portal for the client to remember.
- Works entirely in the web browser.

“If your client can open a link and read a text message, they can use SG/Send.”

Security depends on two secrets sent via two different channels.

Eliminating friction in core workflows.

Use Case 1: The Tax Return (Outbound)

- **Scenario:** Sending a draft self-assessment containing UTRs and income details.
- **Solution:** Client receives a link via email and key via text.
- **Benefit:** Files are downloaded and the link expires. Data never sits in an inbox.

Use Case 2: KYC & AML (Inbound)

- **Scenario:** Onboarding a new client requires Passport copies.
- **Solution:** Client snaps a photo and sends via SG/Send.
- **Benefit:** No passport photos languishing in your 'Sent' folder or cloud backups.

Stopping payment redirection fraud before it starts.

Use Case 3: Financial Hygiene

- **Scenario:** Exchanging bank details or accounting software credentials (Xero/QuickBooks).
- **Risk:** Email is the primary vector for invoice fraud (interception and substitution).

The 'One-Time Download' Feature

Credentials or bank details can be set to vanish immediately after retrieval.

Outcome: Sort codes, account numbers, and logins are retrieved once, then deleted from the server forever.

Protecting your advice and their business structure.

Use Case 4: Confidential Advice

- Scenario: Insolvency warnings, personnel issues, tax planning.
- Benefit: Keeps sensitive text out of shared inboxes and away from IT support staff who might have email access.

Use Case 5: Contracts & Legal

- Scenario: Engagement letters, shareholders' agreements.
- Benefit: Secure exchange of commercial terms without password-protected PDFs (where the password is usually sent in the same email).

What your client sees: Zero Friction.

No Portal Login Required.

Receive

Client gets an email with a secure link.

Click

Opens a simple page in the browser

Unlock

Enters the decryption key from SMS

Download

The document decrypts and downloads

Keeping the regulators happy.

GDPR

Data encrypted at rest and in transit. Auto-expiry demonstrates “appropriate technical measures.”

AML / KYC

Secure transport of ID docs. Proof of transfer without storing raw files in email.

ICAEW / ACCA

Upholds codes of conduct regarding client confidentiality.

HMRC

Protects tax data (UTR, NI) from cleartext transmission.

Professional Indemnity

A defensible answer if an insurer asks how you transfer data.

Why you can trust the infrastructure.

Zero Knowledge Architecture

Your Device (Browser)

Encryption happens here.

The Internet / Server

Server only sees encrypted blob.
SG/Send staff cannot read the file.

Client Device (Browser)

Decryption happens here.

The server never sees the file, the message, or the key in plaintext.

Evolving with your practice.

Expiring Links

Time-boxed access
(1hr, 24hrs, 7 days).

Read Receipts

Audit trail to verify downloads.

Co-branding

Your logo, colours, and domain.

Documents

Time-front check
connect activity.

Document Signing

Integration for
engagement letters.

Data Rooms

Dedicated encrypted
storage areas.

Deployment options to suit your scale.

Shared Instance

send.sgraph.ai

Immediate start.
Low cost (pennies per transfer).

Best for trying it out.

Dedicated Instance

secure.yourfirm.co.uk

Your branding.
Your domain.
Infrastructure <£50/mo.

Best for professional
presence.

Self-Hosted

Your AWS Environment

Strict data residency.
Full control.

Best for compliance-heavy
firms.

A negligible cost for total peace of mind.

Data Breach Cost

ICO Fines (up to £8.7M) + Reputation Loss

Client Portal

£50–£200/month + High Friction

SG/Send

<£50/month (Dedicated) or Pennies per transfer

Negligible Cost

Moderate Cost

Severe Cost

Security without the friction, at a fraction of the cost.

Stop emailing passports today.

- 1. Try it now at send.sgraph.ai**
- 2. Send your first secure document.**
- 3. Contact us to setup secure.yourfirm.co.uk**

The product works today, in your browser. Your clients don't need to install anything. That's the point.
