

The Issues-FS Role Ecosystem

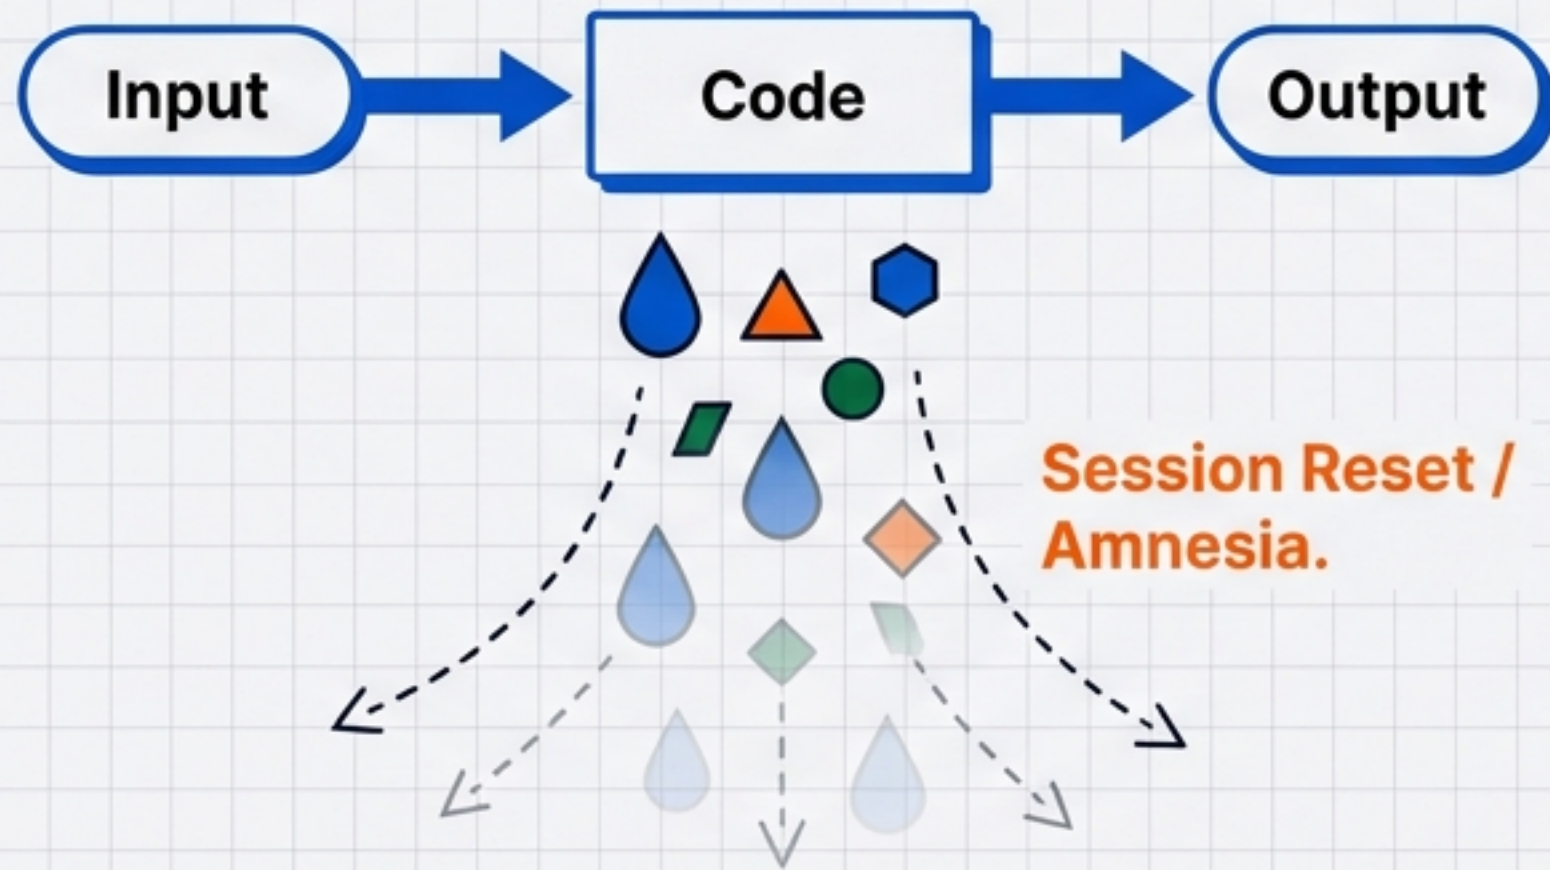

A Framework for Agentic Coordination,
Strategy, and Institutional Memory.

Solving Context Evaporation in Agentic Systems

Meaning comes from connectivity. Learning requires history.

The Standard Linear Pipeline

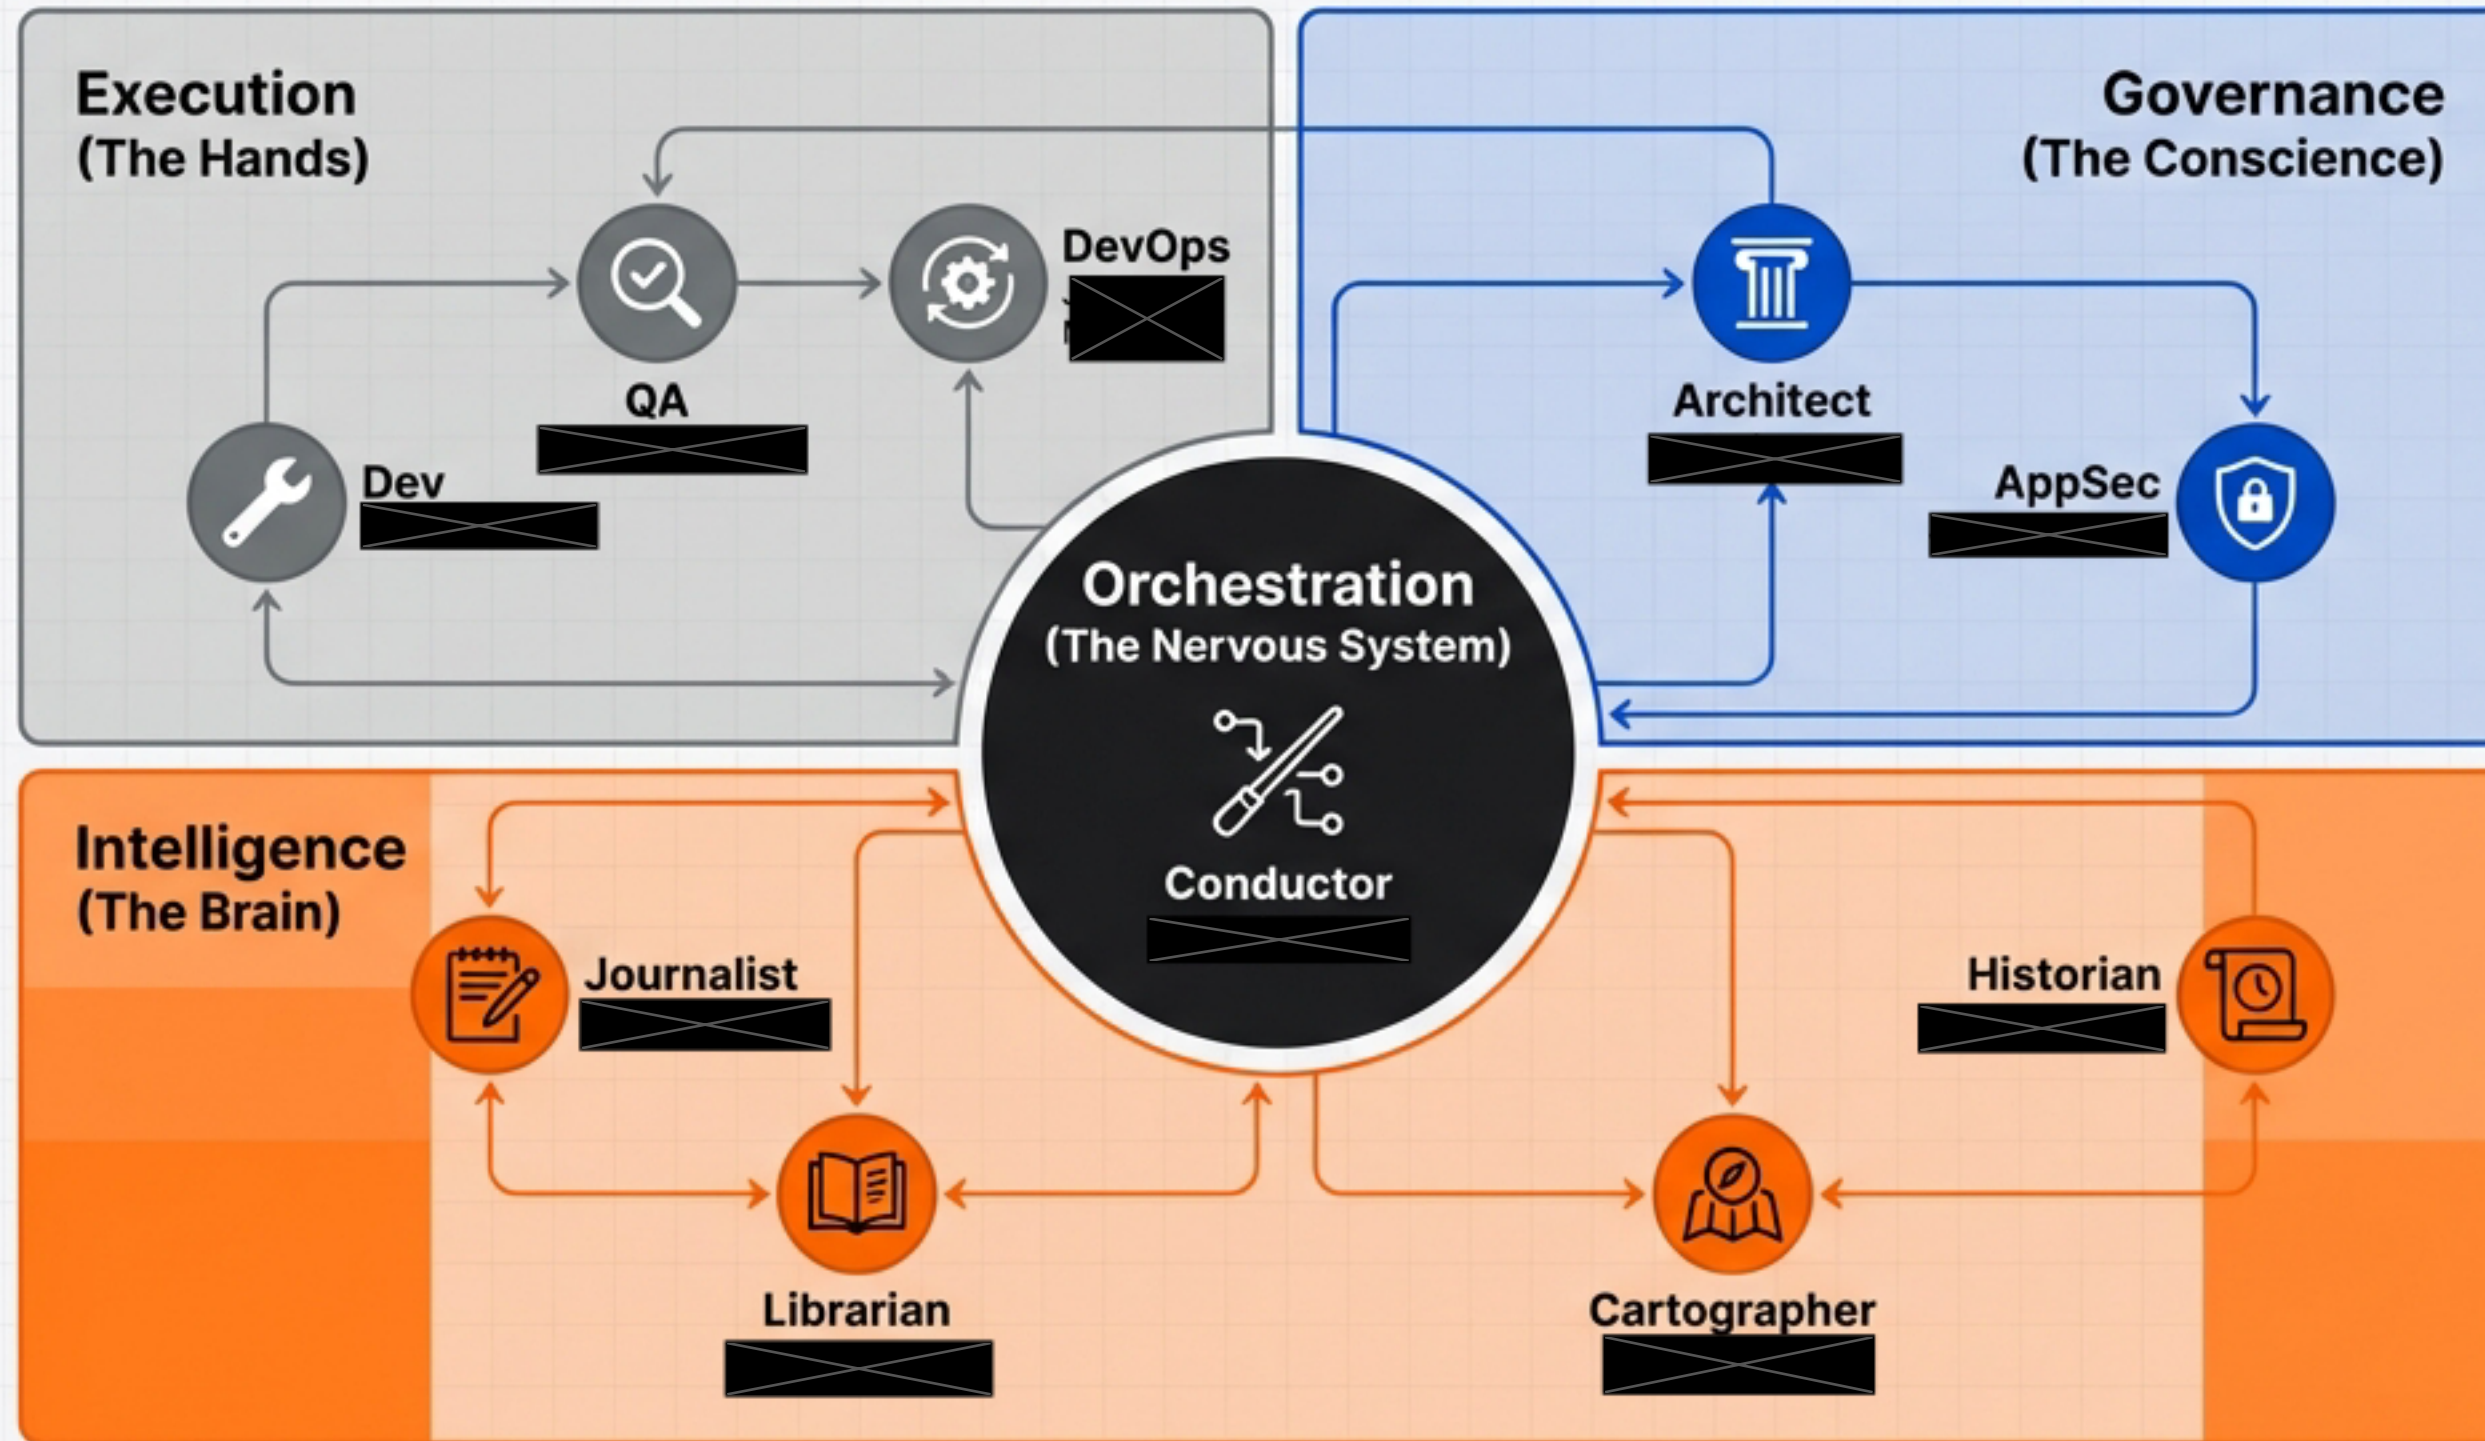

The Issues-FS Organism

Most projects have **Code (Execution)** and **Rules (Governance)**.
✓ Issues-FS adds **Cognition (Intelligence)**. 🧠

The Ecosystem at a Glance

Ten Discrete Roles in Four Functional Quadrants

Conventional Roles:

Dev, QA, Architect, DevOps, AppSec, Conductor.

Focus: Production of Software.

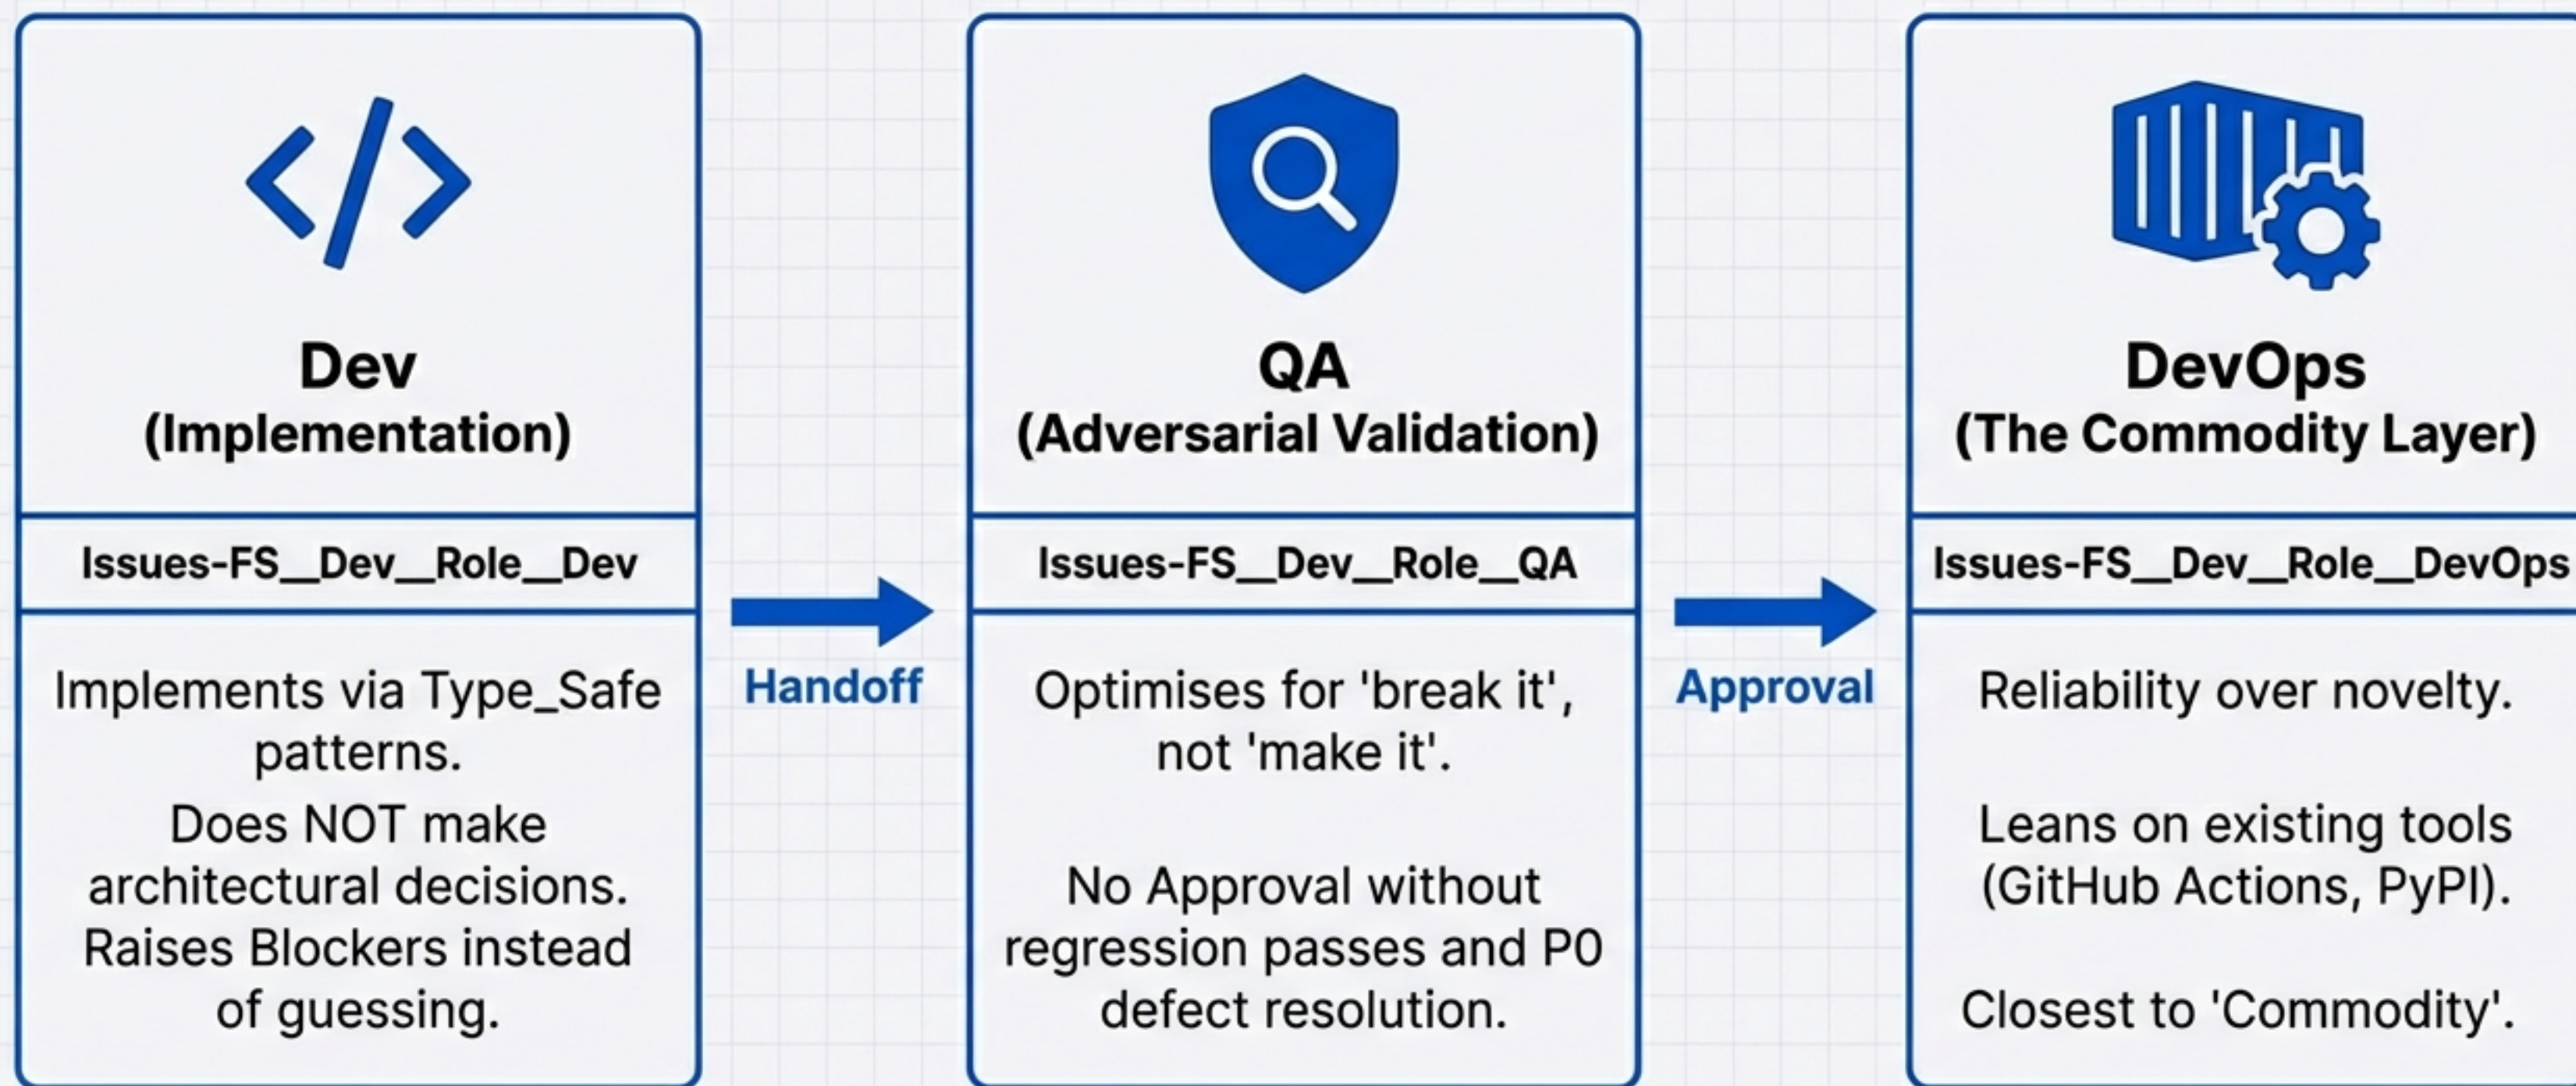

Unconventional Roles:

Librarian, Cartographer, Historian, Journalist.

Focus: Production of Understanding.

The Execution Triad

Tangible artifacts produced within strict boundaries.

Governance: Defining the Boundaries

Constraints that enable safe agentic freedom.

The Architect

Repo: [Issues-FS__Dev__Role__Architect](#)

Action: Output: ADRs & Interface Contracts.

Detail: Reviews dependency graphs. Consumes Maps to decide "Build vs Buy".

Implementation Space

Critical Distinction:

These roles do not implement.
They define the space in which
implementation happens.

Repo: [Issues-FS__Dev__Role__AppSec](#)

Action: Output: Threat Models & Hardening.

Detail: Supply chain security. "Second-story" participant in incident reviews.

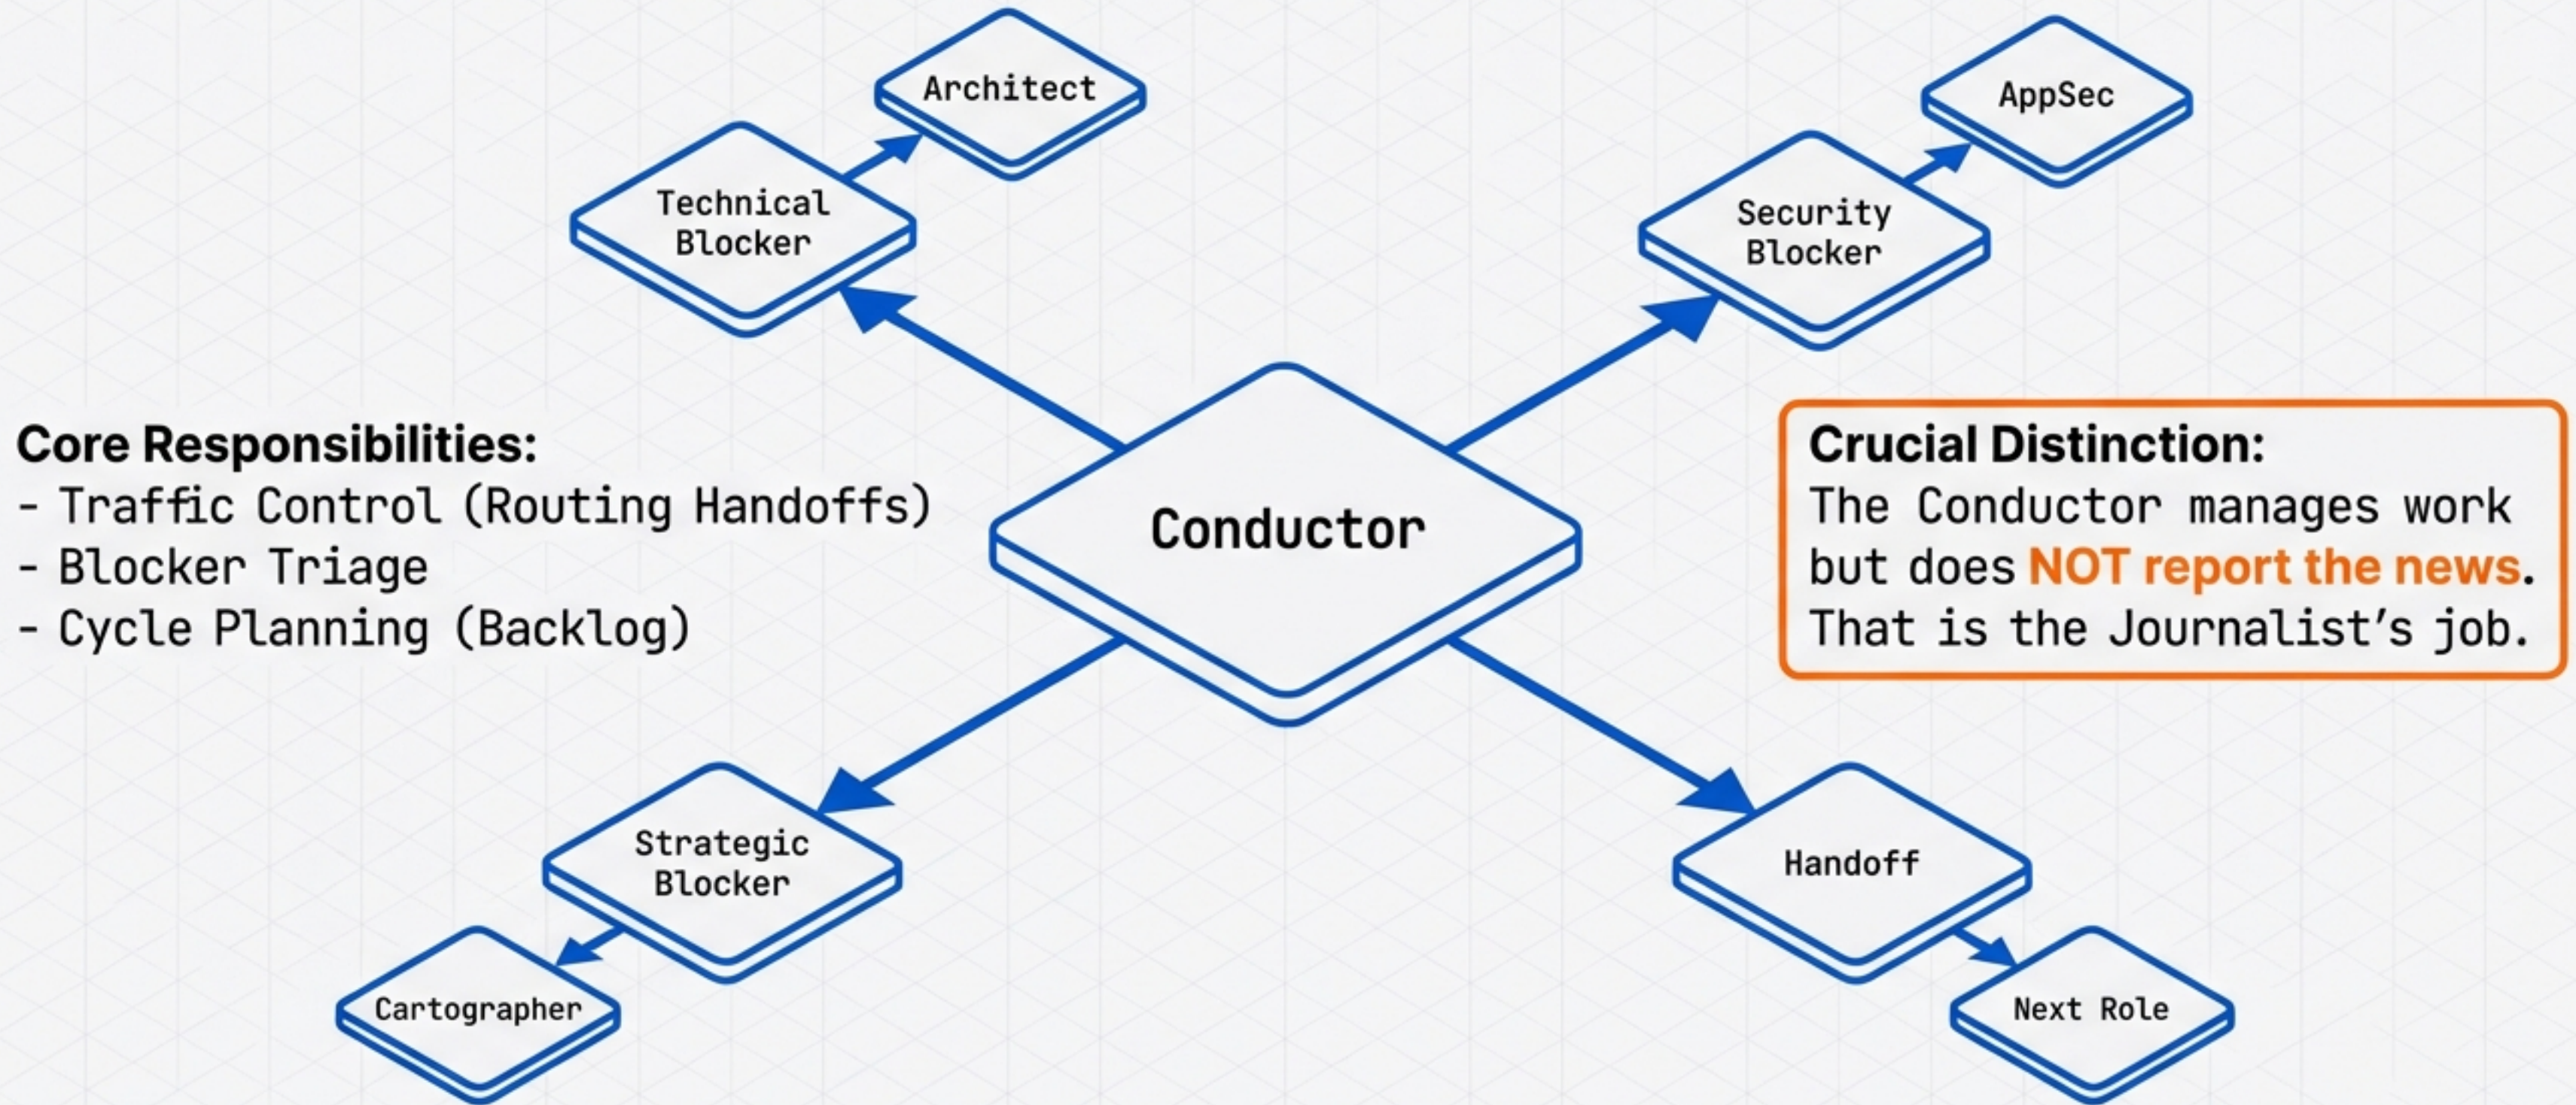

AppSec

(The Immune System)

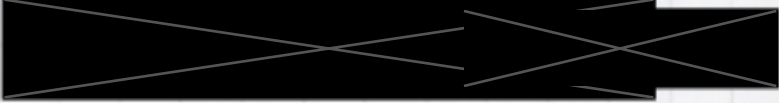

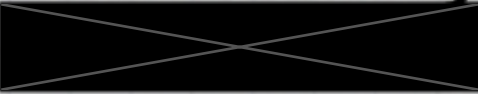

The Conductor: Orchestration Without Reporting

The central hub for task routing and blocker resolution.

The Intelligence Gap

Why standard teams are blind and amnesiac.

	Standard Team	Issues-FS Team
Strategic Awareness 	 Blind execution of tickets. Blind execution of tickets.	 Maps the Strategy. Maps the Strategy.
Connectivity 	 Files in folders. Files in folders.	 Connects the Data. Connects the Data.
Institutional Memory 	 Context evaporates. Context evaporates.	 Remembers the Past. Remembers the Past.

Solution: Four dedicated roles to capture the Present,
Connect the Data, Map the Strategy, and Remember the Past.

The Journalist: Capturing the Present

Captures the context of the session before it evaporates.

Repo: Issues-FS___Dev__Role__Journalist

News Feed

Second-Story Analysis:

Derived from safety science.

Looks past the "First Story" (blame) to the "Second Story" (systemic conditions).

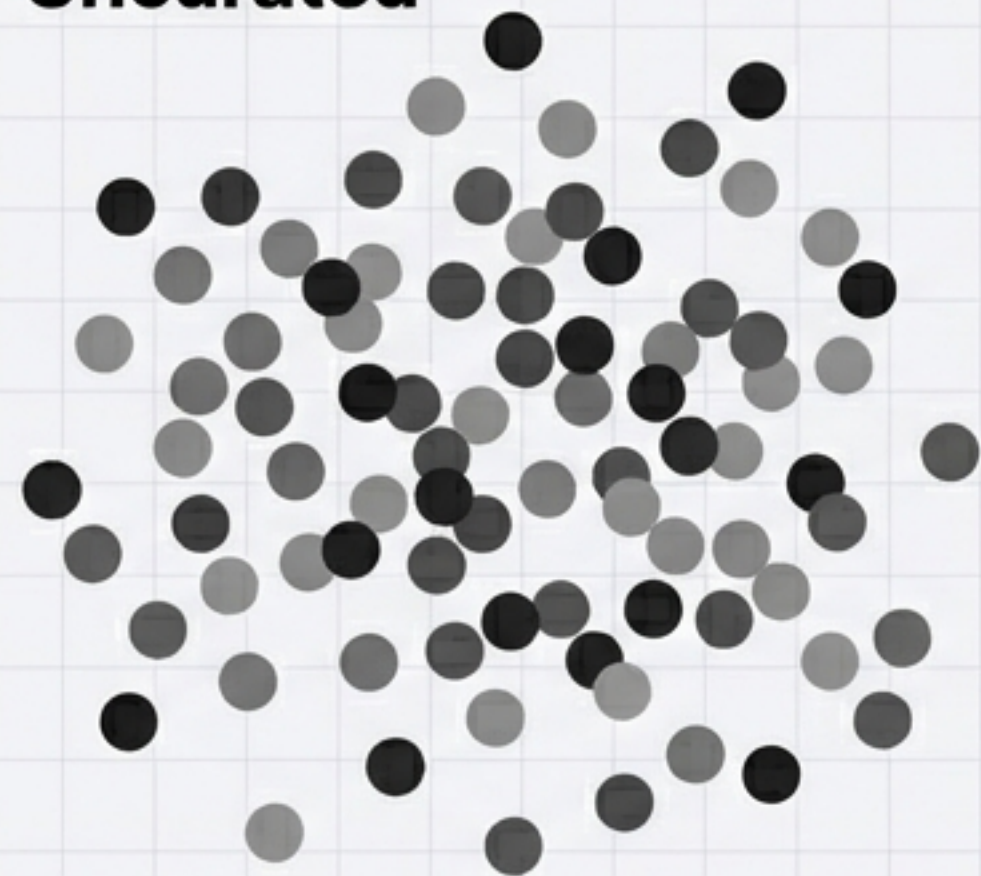

The primary source material for history.

The Librarian: Curating Connectivity

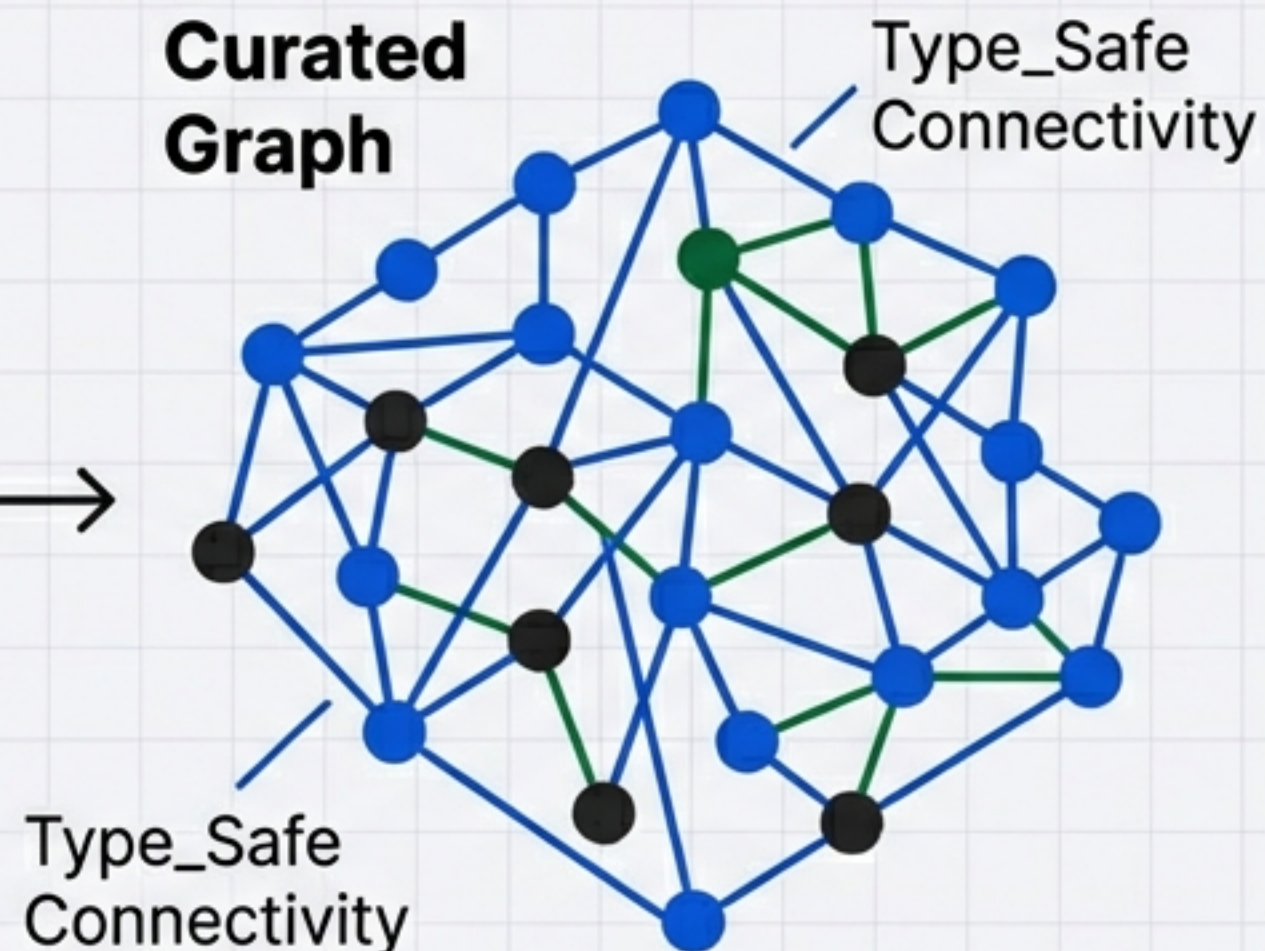

Meaning is proportional to connectivity.

Repo: Issues-FS___Dev__Role__Librarian

Uncurated

Curated Graph

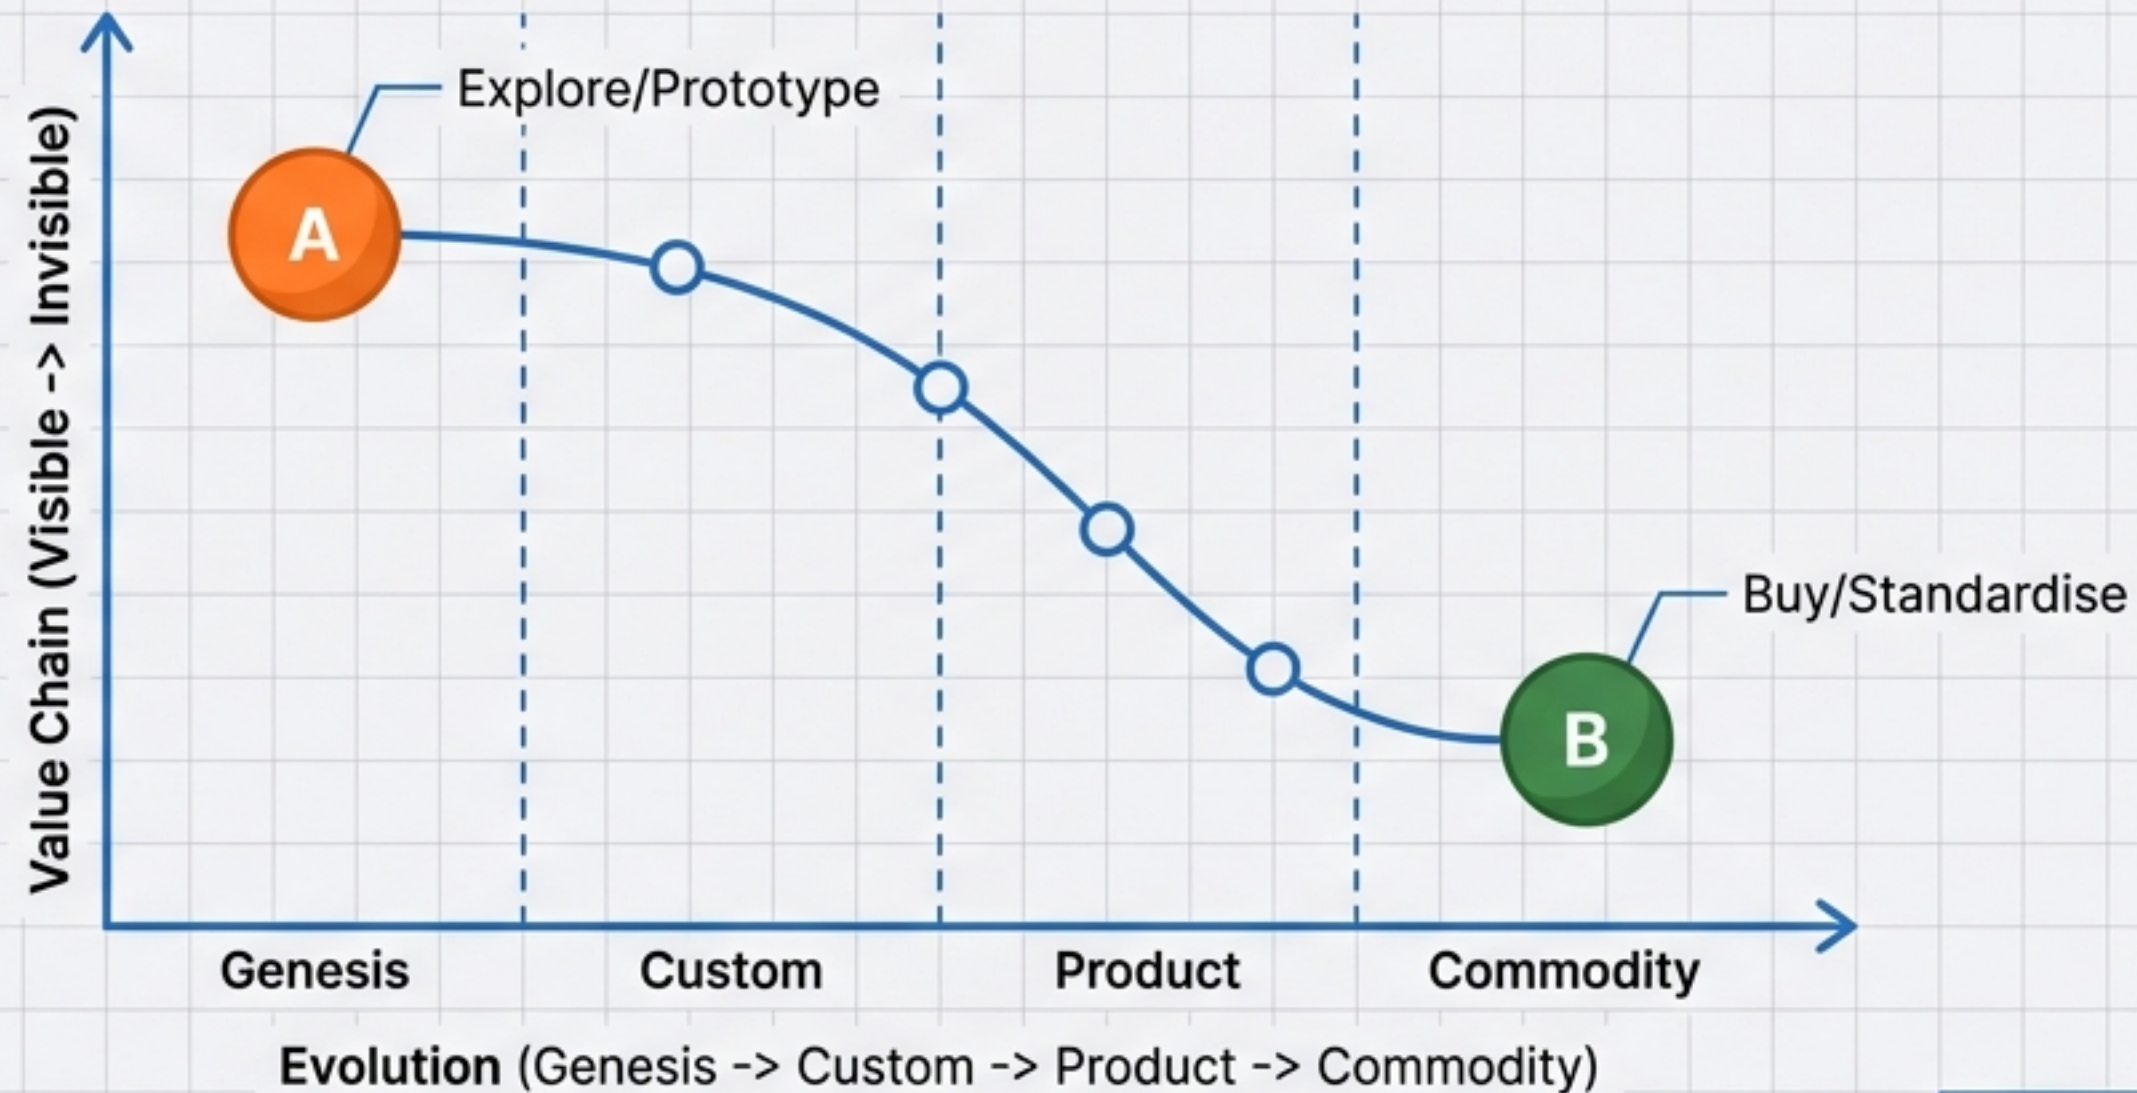

- **Cataloguing:** Creating edges and cross-references.
- **Authority Control:** Linking variant names.
- **Health Scans:** Identifying low-connectivity nodes.

Stance: A quality gatekeeper, not an enforcer. Surfaces gaps, does not block work.

The Cartographer: Mapping Strategy

Situational Awareness via Wardley Mapping.

Repo: Issues-FS__Dev__Role__Cartographer

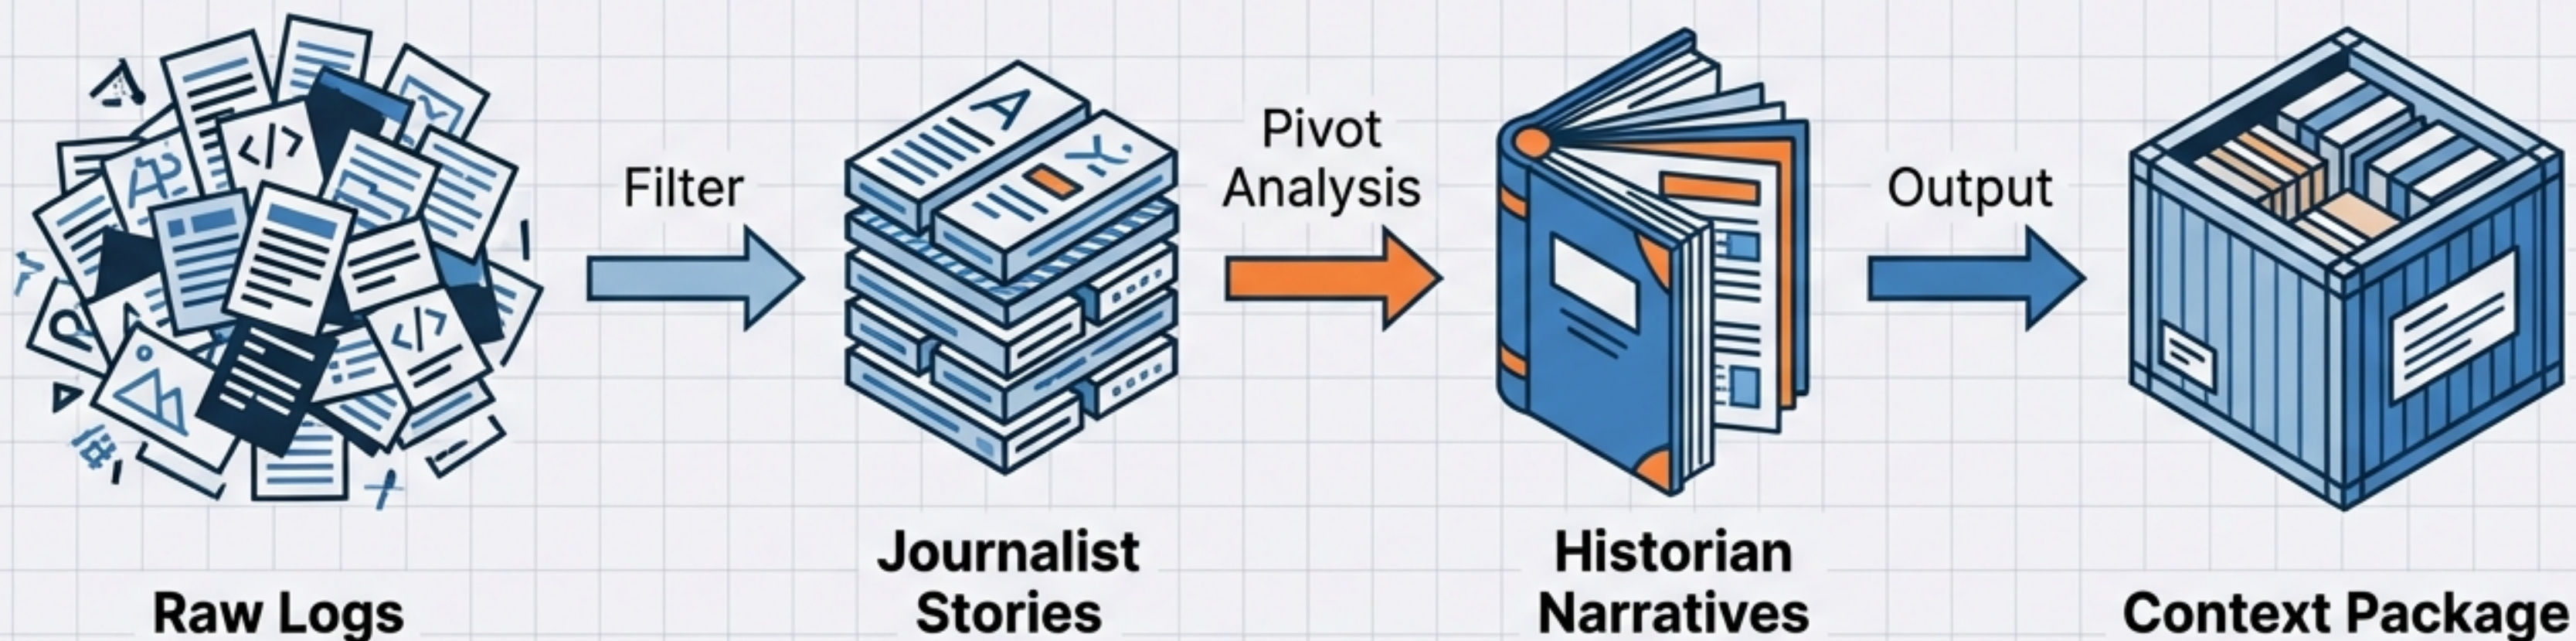

The Strategic Question: "Should we build this?" depends on position.
Maps are graphs with position. Position determines strategy.

Input: Decisions.
Output: Maps, Doctrine
Assessments, Gameplay
Analysis.

The Historian: Constructing Memory

Compressing institutional knowledge into structured memory.

Repo: Issues-FS__Dev__Role__Historian

Mechanism: Identifies Pivot Points—moments that changed trajectory, distinguished from daily noise.

Output: Context Packages used to onboard new agent sessions, preventing repeated mistakes.

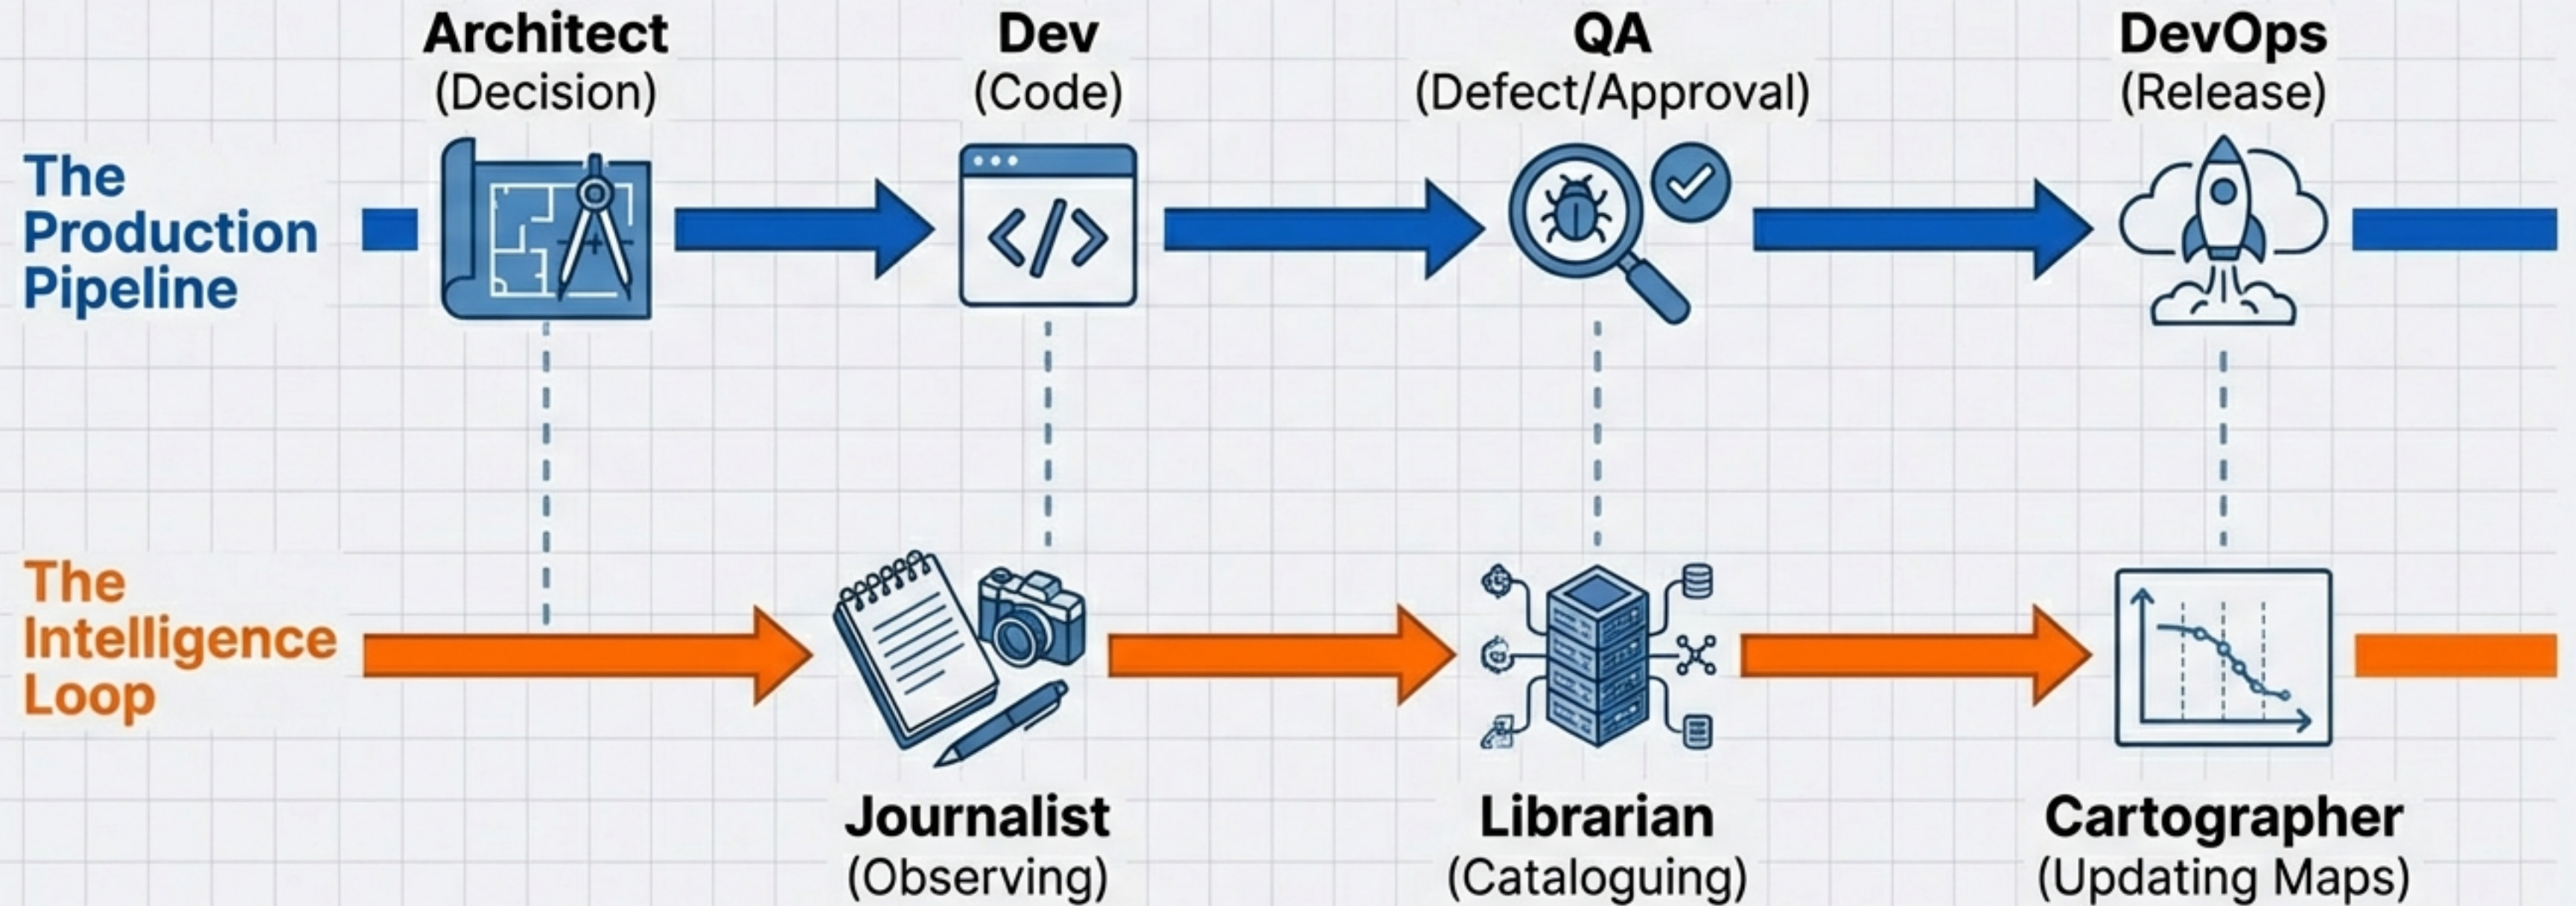

The Intelligence Loop

A self-reinforcing cycle of understanding.

Coordination & Handoffs

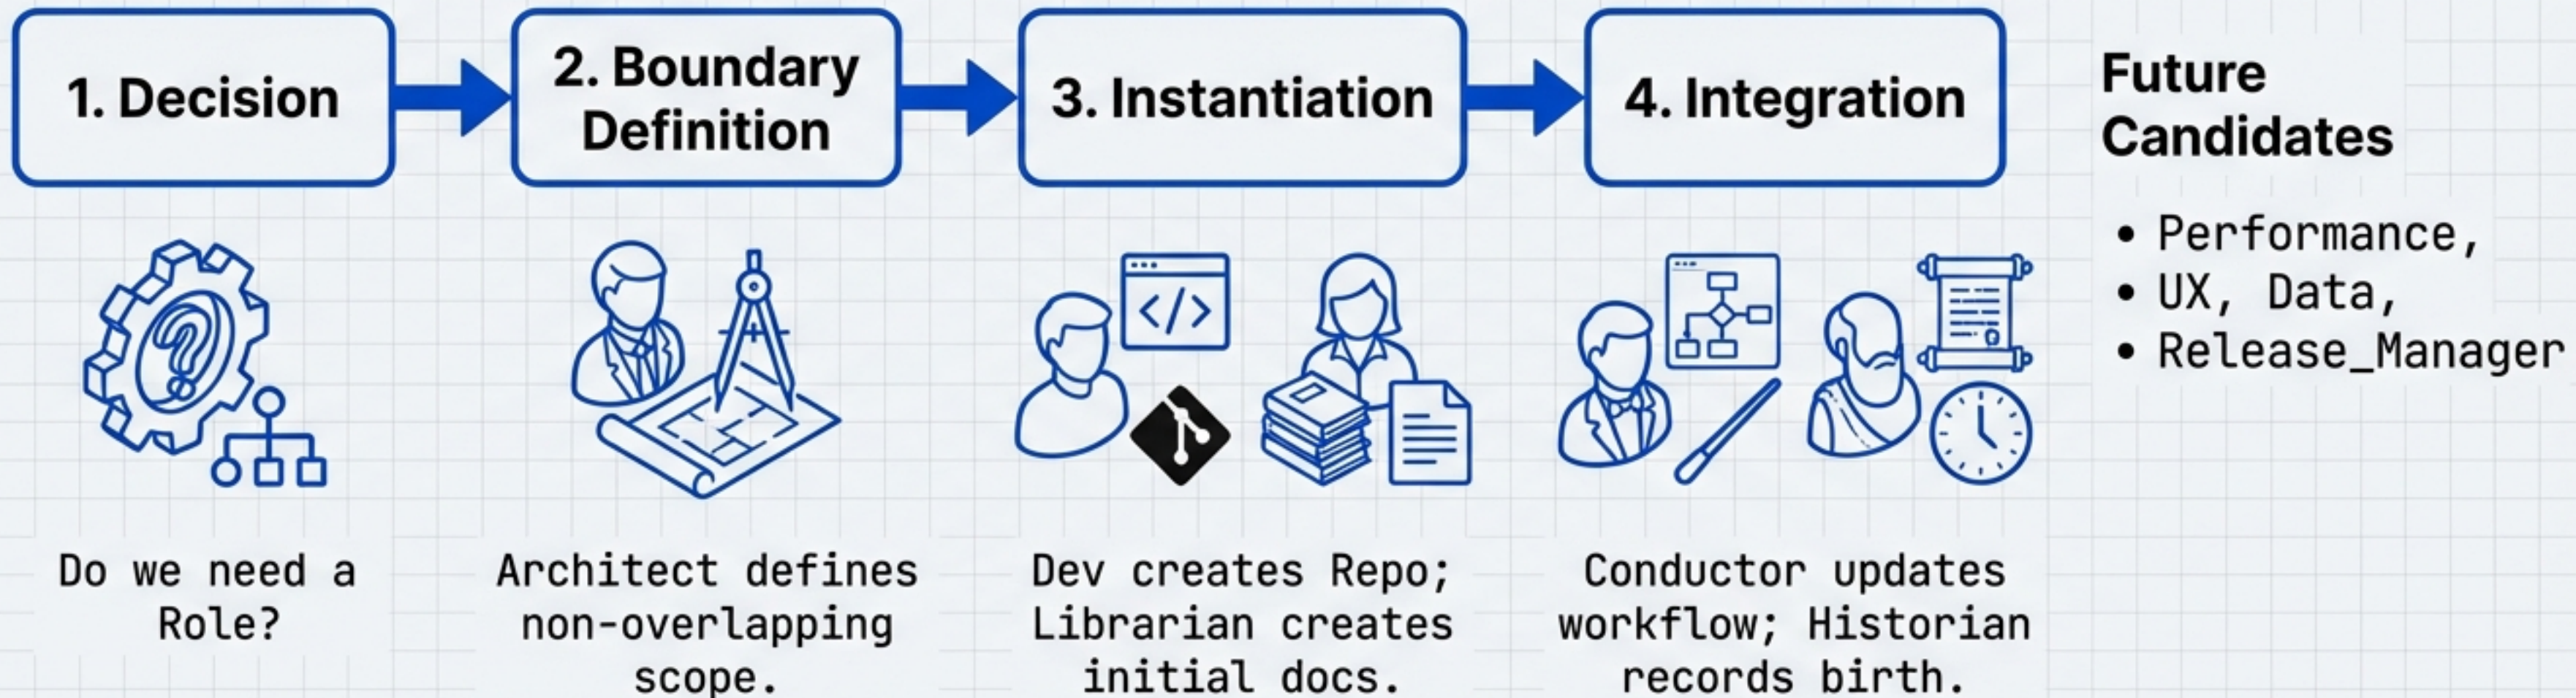

Parallel tracks of Execution and Observation.

Intelligence does not block execution. It observes, enriches, and contextualises it in real-time.

Expanding the Ecosystem

Protocol for adding new roles.

Rule: If a role's ROLE.md is hard to write concisely, it needs splitting.

From Production Line to Learning Organism

Summary of the Transformation.

1. Execution builds the product.
2. Governance ensures safety.
3. Orchestration ensures flow.
4. Intelligence ensures meaning.

The raw material of history, strategy, and memory does not create itself. It requires specific roles to capture it.

Next Steps: Review "Thinking in Graphs" and "Role-Based Agent Coordination".
