

The Feb 10-11 Inflection Point 31 Briefs Defining the Future of Issues-FS

A comprehensive vision for Agentic Development,
Graph Architecture, and Radical Quality.

The Largest Single Delivery of Direction in Project History

On Feb 10-11, 2026, 31 briefs were delivered, shifting the project from "experimental scripts" to "foundational platform".

01. Code Quality & Discipline (Atomic Branches)

02. Architecture (LETS & Transaction Stores)

03. GitHub Integration (The Digital Twin)

04. Visualization (Pivot Tables & Deltas)

05. Cost Control (Micropayments)

06. Security (Risk Trees & CISO Role)

07. Workflow (Iterative Cycles)

08. Semantic Content (RSS & Personas)

THE GOAL: Establishing Issues-FS as the Git for Issues
and the operating system for AI Agents.

AI AGENTS
AUTONOMOUS
EXECUTION ENGINE

If It Exists, It Is a Graph. The Unifying Abstraction.

Increasing Human Agency Through Agentic Coding.

Traditional Dev

Agentic Dev

- ⚙️ **Reject Vibe Coding:**
Structure increases control.
- 📄 **Dependency Adaptation:**
LLMs copy and adapt only the 5-20% needed.
- 🔗 **Batch & Delegate:**
Code in flow, delegate refactoring asynchronously.

← OPTIMIZED WORKFLOW

"Culture is what happens when nobody's looking." - Brief #24

Storage Architecture: The LETS Principle

The File System is the Transaction Store

Capabilities
Enabled

▶ Resume

↶ Revert

🔍 Audit

⌂ Replay

Refactoring Trigger: The 'P1 Path Injection' bug (Brief #7) necessitated the separation of Content, Path, and Storage layers.

Evolving Complexity & Frictionless Capture

The system must compete with Excel on speed (capture)
but survive where Excel fails (scale).

**NO SURPRISE: Support growing complexity
without requiring it upfront.**

Atomic Branches & Context-Complete Briefs.

SPRINT
ITERATION

EPIC
WORKSTREAM

The Golden Rules

1. **Atomic Branches:** Every change gets its own branch.
2. **Context-Complete Briefs:** No coding without a task brief.
3. **Graph Sequencing:** Dependency determines order, not calendar.

Quality Assurance: The Bellwether Test.

Can You Replicate the Bug in Code?

METRIC: TIME TO FIRST REPLICATION TEST.

NOTE: Code has no authorization model. It runs as admin.
We must map the **Blast Radius**.

Formalizing Security: CISO, GRC, and AppSec

Vulnerabilities are inevitable. Unaccepted risk is not.

The GitHub Strategy: A Digital Twin.

Can your company survive losing its GitHub issues?

INTERFACE: CLI FIRST. A Git-style command line for humans and agents.

Visualization: Seeing the Graph.

Seeing the state diffs, understanding the evolution.

ROLE:
The Designer
(API, CLI, Code Aesthetics).

TOOL:
Normalized Graphs
(No shared nodes).

TOOL:
Pivot Tables
(Hierarchical views).

TOOL:
Graph Deltas
(Visual state diffs).

The Agentic Economy.

Micropayments & Cost Control.

SECURE ADAPTATION LAYER

New Business Model:

Dependency Adaptation as a Service. Selling the maintenance of adapted, secure, open-source code.

Consuming the 31 Briefs: Role-Based Map.

Role	Must Read Briefs
<u>Architect</u>	→ #5 (Complexity), #6 (Transactions), #7 (Refactoring), #23 (Blast Radius)
<u>Developer</u>	→ #4 (Atomic Branches), #21 (Async Refactoring), #22 (Bellwether)
<u>QA</u>	→ #8 (Personas), #10 (Playwright-as-docs), #22 (Bellwether)
<u>Librarian</u>	→ #3 (Daily Workflow), #14 (Ideas Library)
<u>Historian/Journalist</u>	→ #10 (Website), #19 (Synthesis)

Immediate Action Items.

P1: IMMEDIATE (Security/Arch)

Fix Path Injection Vulnerability (Brief #7) •

CRITICAL RISK

BLAST RADIUS REDUCTION

Refactor: Separate Content, Path, and Storage Layers. •

ARCHITECTURE

P2: HIGH (Feature)

Implement Recursive Folder Consumption. •

FUNCTIONALITY

Design Transaction Store Schema. •

GROWTH ENABLER

DATA STRUCTURE

Process Owners: Librarian (Ideas Library) & Conductor (Daily Workflow).

Building the 'Git for Issues'

From Scripts to Platform

The audience should feel fulfilled, engaged, and enlightened—like they have covered everything they needed to know.
