

RUNNING P3-AS-P1 IN PRACTICE

The Operational Playbook for High-Frequency Incident Response.

THE VALUE IS NOT IN FIXING THE INCIDENT. THE VALUE IS IN EXERCISING THE RESPONSE MUSCLE.

THE P3-AS-P1 PROTOCOL

THE EVENT (P3)

[P3] STATUS: NORMAL

IMPACT LEVEL: MINIMAL

MINUTE PULSE

IMPACT LEVEL: MINIMAL

DEFINITION: Low business impact. Actual damage is contained. Nothing is on fire. No 2am pages.

THE FEELING: Routine, minor annoyance.

KEY INSIGHT: We run the full process to reveal gaps and build the infrastructure needed when a real P1 hits.

THE RESPONSE (AS P1)

[P1] STATUS: CRITICAL RESPONSE

READINESS: MAXIMISED

DEFINITION: Full team mobilisation. Full investigation. Full analysis of 'what could have happened'.

THE ACTION: Identifying gaps, exercising the team, building muscle memory.

THE FIRST RUN IS ALWAYS A FAILURE

The failure is not technical; it is logistical.

The first time a team attempts this, they fail. P3-as-P1 generates a prioritised list of gaps derived from reality, not theoretical risk assessments.

MANIFEST CHECKLIST

- ☒ Where to convene?
(Channel, room, system)
- ☒ Who has access to the data?
(Logs, dashboards)
- ☒ How to coordinate roles?
(Who talks to whom)
- ☒ Where are the runbooks?
(Are they outdated?)
- ☒ How to maintain situation awareness?

THE AGENTIC COST MODEL

FEASIBILITY ANALYSIS: DISRUPTION VS. CONTINUITY

TRADITIONAL ORG

DOCUMENT ID: P5-P1-P80T0-SEV-4

AGENTIC SETUP

DOCUMENT ID: P5-P1-P80T0-SEV-4

WE CAN RUN THESE FREQUENTLY BECAUSE THE BAU TEAM IS NOT DISRUPTED.

IDENTIFYING THE SIGNAL

Mandatory Triggers for Protocol Activation

THE INCIDENT TEAM STRUCTURE

Role-based activation ensures precise coverage without 'too many cooks'.

PHASE 1-3: STABILISATION

Mandatory Protocol for Immediate Response

01 DECLARATION

Create the 'Issues FS' database. Non-negotiable. Single source of truth.

02 ASSEMBLY

Conductor activates roles. Parallel mobilization.

03 SITUATION AWARENESS

Establish Knowns/Unknowns.

THE LIBRARIAN:: Delivers runbooks & history. Team must not hunt for info.

PHASE 4: DEEP INVESTIGATION

Beyond the Surface Debugging

PHASE 5-6: CAPTURE AND NARRATIVE

Protocol for Runbook Assessment and Post-Incident Documentation

PHASE 5: RUNBOOK ASSESSMENT

Did a runbook exist?
Was it accurate?

ACTION: Every missing step =
Item in Improvement Backlog.

PHASE 6: DOCUMENTATION

The Historian constructs the timeline.
The Journalist captures the narrative.

PHASE 7: CLOSING THE LOOP

Finalizing the Operational Cycle

CLOSE-OUT CRITERIA

- [✓] Immediate issue resolved or risk accepted
- [✓] Full envelope analysis complete
- [✓] Improvement backlog captured in Issues FS
- [✓] Report written & Database archived

APPROVED

KEY PRINCIPLE: Improvement tasks don't need to be **done** now, but they must be **captured** now.

A Structured Incident Database, Not a Chat Log.

- ✓ **REPLAYABILITY:**
Walk through actions in sequence.

- ✓ **ANALYSIS:**
Graph queries identify bottlenecks.

✓ **TEMPLATING:**
This incident becomes the map for the next.

THE METHOD:

A slow game of tennis.
Role A serves a question.
Role B volleys an answer.

THE PULSE OF RESPONSE

Role: The Journalist

STATUS UPDATE CARD

UPDATE #04 | 14:00 HRS

STATUS: INVESTIGATING

FINDINGS: Root cause identified as config drift.

OPEN QUESTIONS: Did this affect region EU-WEST?

NEXT ACTIONS: Cartographer mapping dependencies.

THE MANDATE:

Do not wait to be asked.

CADENCE:

Hourly (Active) /
Daily (Slow-burn).

AUDIENCE:

Distinct versions for
Tech vs. Leadership.

FROM INCIDENT TO EVENT

Maturity Model Case Study: The Lost Laptop

AS INCIDENT (UNPREPARED)

Disk Encrypted? > UNKNOWN

Remote Wipe? > NO CAPABILITY

Data at Risk? > UNKNOWN

RESULT: PANIC

AS EVENT (MATURE)

Disk Encrypted? > VERIFIED

Remote Wipe? > STANDARD PROTOCOL

Data at Risk? > KNOWN & CONTAINED

RESULT: ROUTINE TICKET

GOAL: Shrink the surface area of “things we aren’t prepared for”.

OPERATIONAL DIRECTIVES

Starting Now: Role Mandates

CISO

Define trigger framework
& weak signals.

CONDUCTOR

Define assembly process
& notification channels.

DEVOPS

Inventory data delivery
speeds. (What takes 5
mins vs 1 hour?)

LIBRARIAN

Build the index of
critical info
(Architectures, Policies).

JOURNALIST

Create status update
templates.

HISTORIAN

Define timestamped
timeline format.

THE DEFINITION OF AN INCIDENT

“SOMETHING HAPPENED THAT WE WERE NOT PREPARED FOR, THAT WE DON'T HAVE THE RIGHT WORKFLOW TO HANDLE, AND THAT COULD ESCALATE BASED ON EVENTS WE DON'T CONTROL.”

P3-AS-P1 IS THE ONLY WAY TO VALIDATE PREPARATION BEFORE THE STAKES ARE REAL.

END OF DIRECTIVE
