

First, Do No Harm.

Simulation, Communication, and Escalation
in the Age of Agentic Response.

The Instinct to Act vs. The Discipline to Think

The Instinct

Contain. Fix. Shutdown. Rollback.

The bias for speed leads to “Second-Order Effects”.
A hasty rollback breaks dependencies. A credential rotation locks out valid users. The cure is often worse than the disease.

The Discipline

Primum Non Nocere.

We use P3 (low severity) incidents as the training ground. P3-as-P1 buys us the time to practice investigation without the crisis pressure.

“In a P3-as-P1, these questions are practice. In a real P1, they’re the difference between a contained incident and a self-inflicted escalation.”

The Pre-Action Protocol

Five questions that must be answered before touching the live system.

Simulation: The Agentic Advantage

We replace hypothesis with modeled consequences.

Building the World Model

The model isn't built in a day;
it is refined with every incident.

The Communication Prism: The Bottleneck

In traditional organisations, the responder manually writes these briefings, competing with the actual investigation work.

The Communication Prism: The Solution

Consistent facts, tailored framing, produced in minutes.

Escalation Mapping: The "What Happens When" Graph

Escalation is a queryable logic structure, not a phone tree.

The '2am Question' and Automated Triage

Agents don't sleep. Humans shouldn't wake up for raw data.

Traditional Response

Agentic Response

The human is woken up to decide, not to investigate.

The Compliance Trap

Analysis: Mapping Efficiency vs. Reality

The Comprehensive Mapping Approach

- **The Trap:** Attempting to map every control and technique theoretically.
- **The Result:** Burnout, “Paper Security”, and mappings that don’t reflect reality.

Directive: Don’t. Map only what the incident touches.

The Living Graph: Organic Framework Integration

Inter

1. Incident Occurs.

Headers

2. Identify relevant technique.

JetBrains Mono

Inter

3. Map only those nodes.

JetBrains Mono

Inter

4. Link Incident ID to Framework Node.

JetBrains Mono

Outcome

An evidence-based posture.

We know exactly which controls matter because they are the ones we actually use.

The “Third Story”: Systemic Weaknesses

P3-as-P1 documents these “Third Stories” to build the case for infrastructure investment.

Case Study: Current Systemic Weaknesses

Warning Card Identity & Access

Agent over-permissions, lack of individual agent accounts.

ID-01: PERMISSION_GAP

Warning Card Code Integrity

Unsigned commits; gap between "who committed" and "who authorized".

CI-02: UNVERIFIED_FLOW

Warning Card Observability

Missing logs, unconnected trails.

OB-03: DATA_VOID

Secure Communication

We are building SGraph Send, but cannot use it yet. We lack secure channels for our own agents.

SC-04: INTERNAL_BLOCK

Roles and Responsibilities

Conductor

Owens the Escalation Graph and Trigger Conditions.

○ ID-001: GRAPH_ORCHESTRATION

Journalist

Owens Multi-Audience Templates & Prism outputs.

○ ID-002: COMMS_SYNTHESIS

Cartographer

Updates Blast Radius Maps & Dependency Graphs.

○ ID-003: SYSTEM_MAPPING

DPO

Owens Regulatory Templates & Data Subject alerts.

○ ID-004: REGULATORY_COMPLIANCE

Advocate

Validates customer comms for human-appropriateness.

○ ID-005: HUMAN_FACTOR_VALIDATION

AppSec

Maintains the 'Third Story' systemic weakness register.

○ ID-006: SYSTEMIC_DEFENSE_REGISTER

Clinical Architectural High-Fidelity

The Practice Field

The P3-as-P1 approach buys us Time. Time to think, time to simulate, time to craft the perfect communication.

⚠ Use every minor incident to update the World Model, refine the Escalation Graph, and practice the discipline of First, Do No Harm.
