

The Missing Link: Completing the SGraph Send Team

Introducing the Advocate, Sherpa,
and Ambassador roles.

The Engine Room: 13 Roles Building the Machine

We currently possess a highly specialised team of 13 roles dedicated to the creation and security of the product. This unit is optimised for **output**: building, testing, securing, and orchestrating SGraph Send.

The Gap: Who Owns the Relationship?

This gap is not a flaw in the code; it is a missing feedback loop in the organisation.

Meet the Growth Triad

The Advocate	The Sherpa	The Ambassador
		
● Focus: The Market Voice	● Focus: The Guide	● Focus: The Multiplier
● Domain: Pre-User (The Unaware)	● Domain: Active User (The Confused)	● Domain: Post-User (The Fan)
● Goal: Getting them to the door	● Goal: Ensuring success & removing friction	● Goal: Turning users into evangelists

These three roles create a self-sustaining growth loop.

The Advocate: Getting Them to the Door

RADAR-X1

SIG.STRENGTH: MAX

Role Definition

The Advocate operates *outside* the product. They are the bridge between the world and SGraph Send.

Key Responsibilities

1. **Identifying** where **potential users hang out** (digital and physical).
2. **Translating technical value** propositions into human needs.
3. **Generating the initial spark of interest.**

THE ADVOCATE
(Filter Unit / Bridge)

FLOW RATE: OPTIMIZED

THE HANDOFF:

They deliver a curious human to the product's threshold.

The Sherpa: Ensuring Success

Role Definition

The Sherpa operates **alongside** the user. They are the **onboarding engine**.

Key Responsibilities

1. Watching users try to use the product and spotting **friction**.
2. Creating **guides**, tutorials, and "**paths**" through the complexity.
3. Answering the question: "How do I do X?" **before the user gives up**.

The Ambassador: The Multiplier Effect

Role Definition

The Ambassador operates *after* the successful transaction. They capitalise on satisfaction.

Key Responsibilities

1. Identifying 'Power Users' and influencers.
2. Equipping happy users with the **tools** to tell others.
3. Managing the community ecosystem.

THE HANDOFF:

They take a single user and turn them into a source of ten new users.

The User Lifecycle Integration

Torque for the Viral Loop

SGraph Send mechanic: Sending a file introduces a new person to the platform.

Without these roles, the recipient downloads and leaves.
With these roles, the recipient becomes the next sender.

The Boundary Map: Who Owns What

They **do not** commit code.
You **do not** manage community threads.

Practical Impact: What Changes For You

ARCHITECT		You get clear requirements based on actual user needs, not guesses.
DEVELOPER		You get higher-quality bug reports filtered by Sherpas, rather than vague complaints.
QA		You get real-world usage patterns to build better test cases.
CISO		You get intelligence on human-factor threats (how users bypass security).
JOURNALIST		You get human stories and case studies to write about.

The Information Return Path

Three Roles. Three Domains. One Loop.

We have built the machine. Now we have the team to drive it.

Welcome to the team.
