

STRATEGIC ANALYSIS & ROADMAP

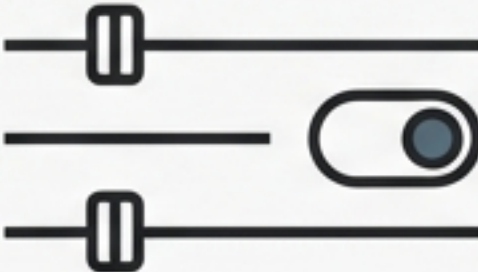

Web Content Filtering Platform: Tier 3 & 4 Future Development

Moving Beyond Prompt Engineering
to Platform Capabilities

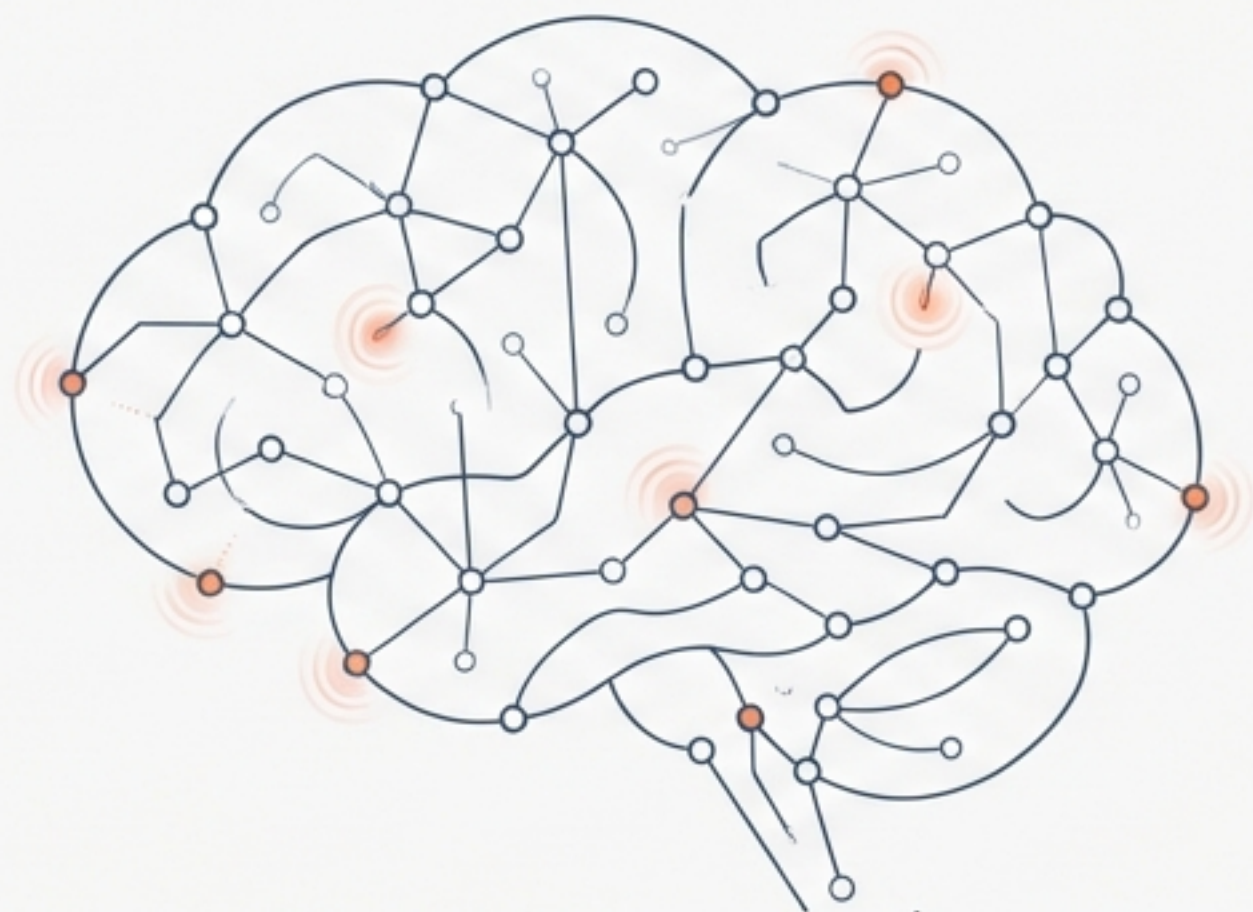

The Next Phase of Value Requires New Engineering Capabilities

Tier 1 and Tier 2 successfully proved the concept using classification prompts. However, current user problems cannot be solved by changing prompts; they require new software capabilities.

UC-10 [CLEAN] Nuisance Removal  Focus: Removing popups/overlays Tech: Rules Engine Timeline: 2-4 Weeks	UC-11 [PRECISION] Mechanical Rules  Focus: User control/hiding elements Tech: Config UI Timeline: 3-6 Weeks	UC-12 [READER] Flat UI Layout  Focus: Standardising layout Tech: Template System Timeline: 2-3 Months
--	---	---

Why We Must Engineer Our Way Out of the Prompt Ceiling

TIER 1 & 2: THE SEMANTIC LAYER

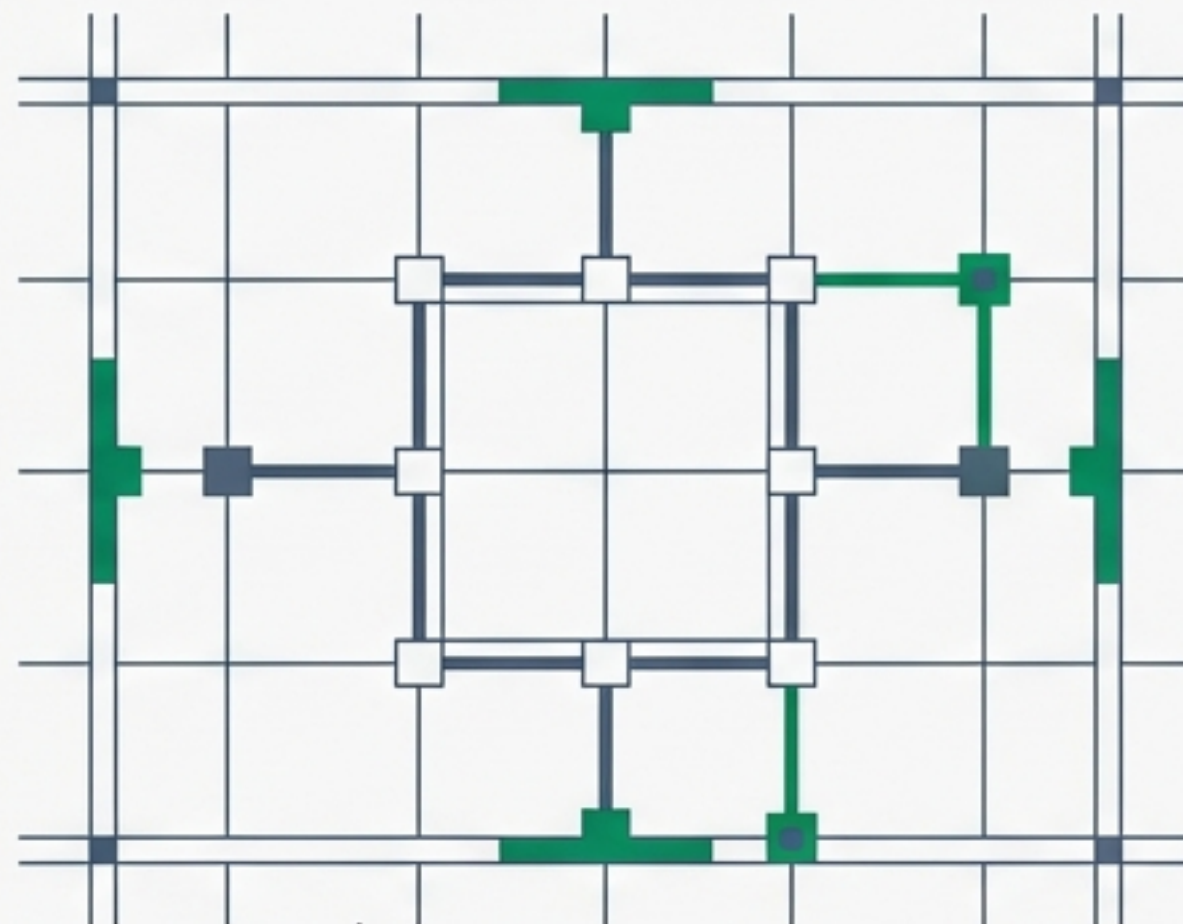

Relies on AI Prompts.

Excellent for text classification.

Limitation: **Probabilistic & Hallucinations.**

Insight: Power users want
mechanical consistency,
not AI interpretation.

TIER 3 & 4: THE STRUCTURAL LAYER

Relies on Platform Code.

Required for UI manipulation.

Value: **Deterministic & Consistent.**

UC-10 [CLEAN]: Solving the Friction of the Modern Web

The User Problem

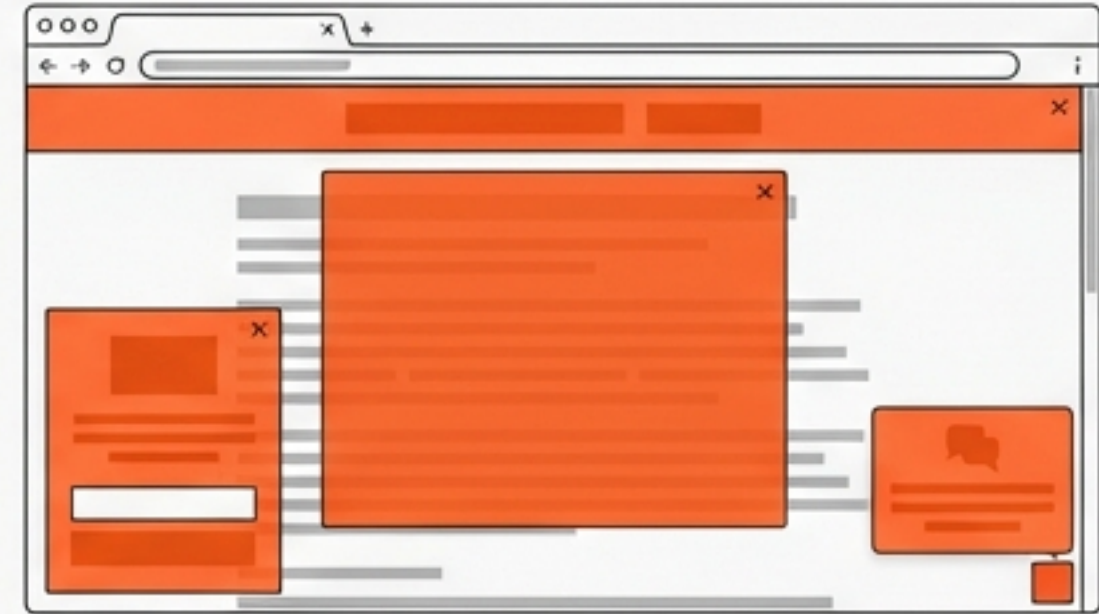

Content sites are increasingly hostile, cluttered with popups, overlays, and intrusive elements that interrupt reading. Interruption is the #1 reason users install ad blockers.

Nuisance Categories:

1. **Overlays** (Newsletter signups)
2. **Floating Elements** (Chat widgets)
3. **Interstitials** (Full-screen takeovers)

Target Audience: The Casual Reader

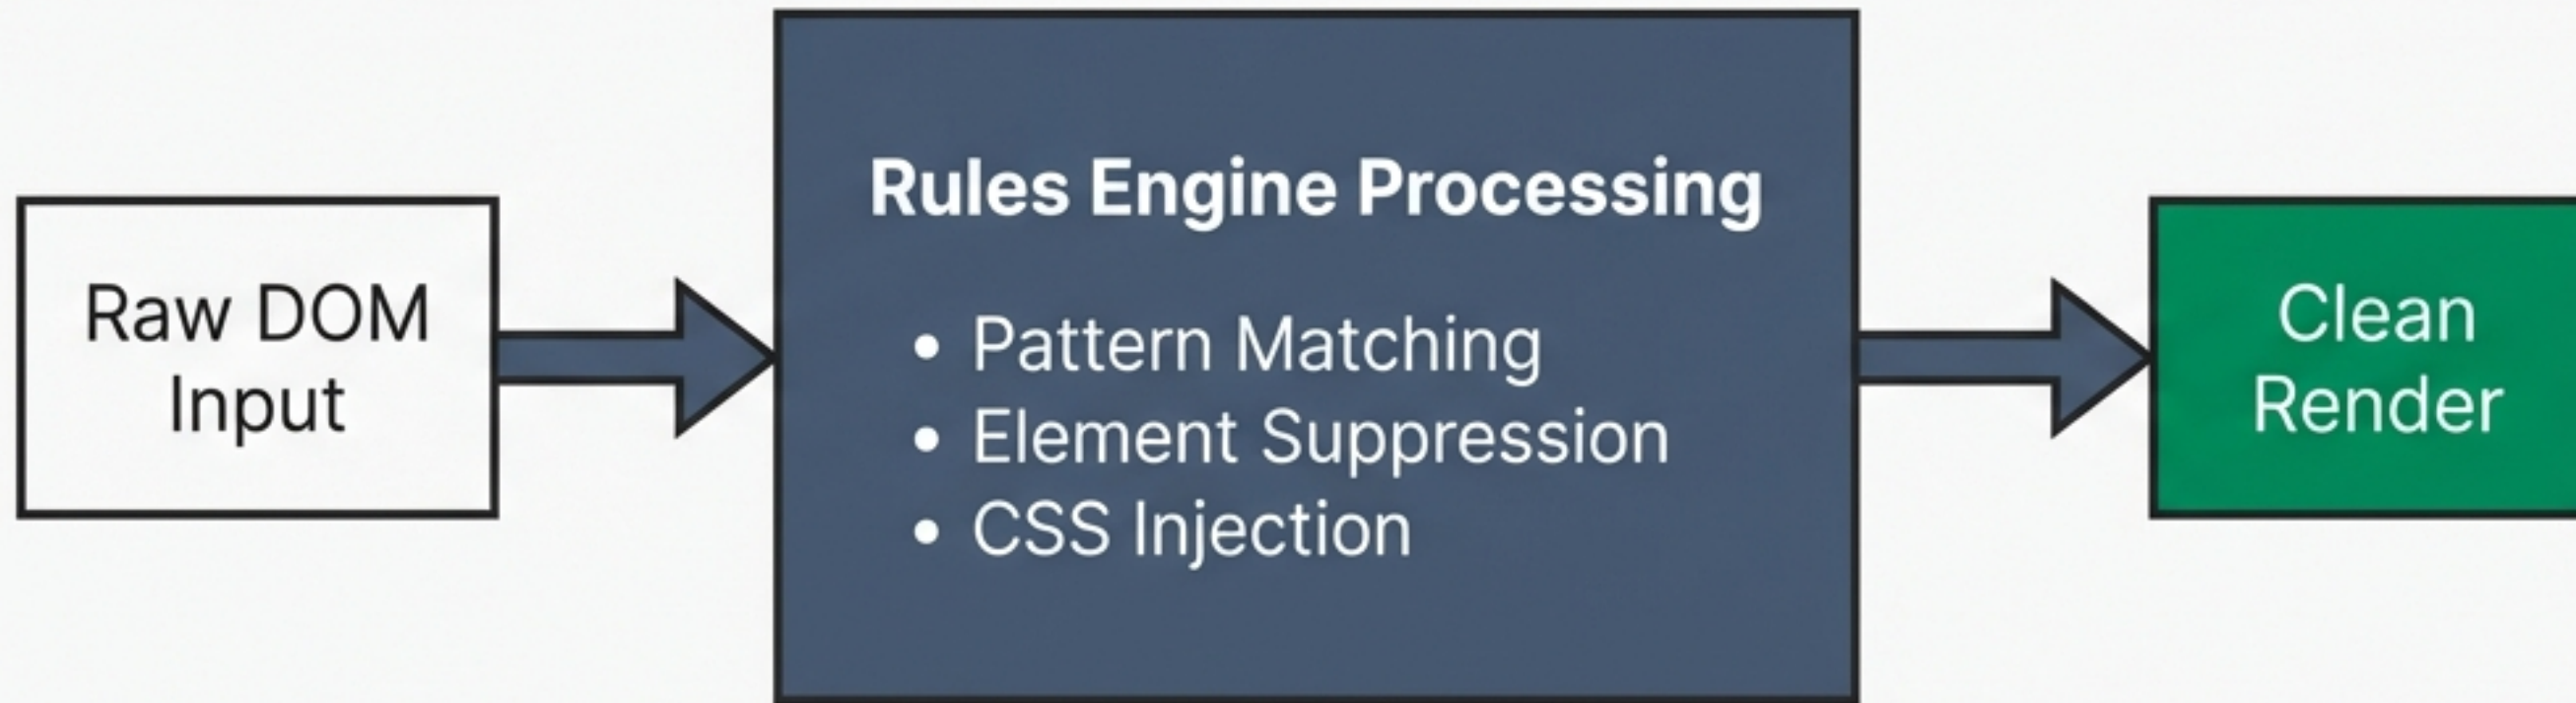

CURRENT STATE

CLEAN STATE

UC-10 Implementation: The Rules Engine

Specs

Tech Stack:
Rules Engine (DOM Manipulation)

Timeline:
2-4 Weeks

Effort:
Medium

Dependencies:
None (Foundational Layer)

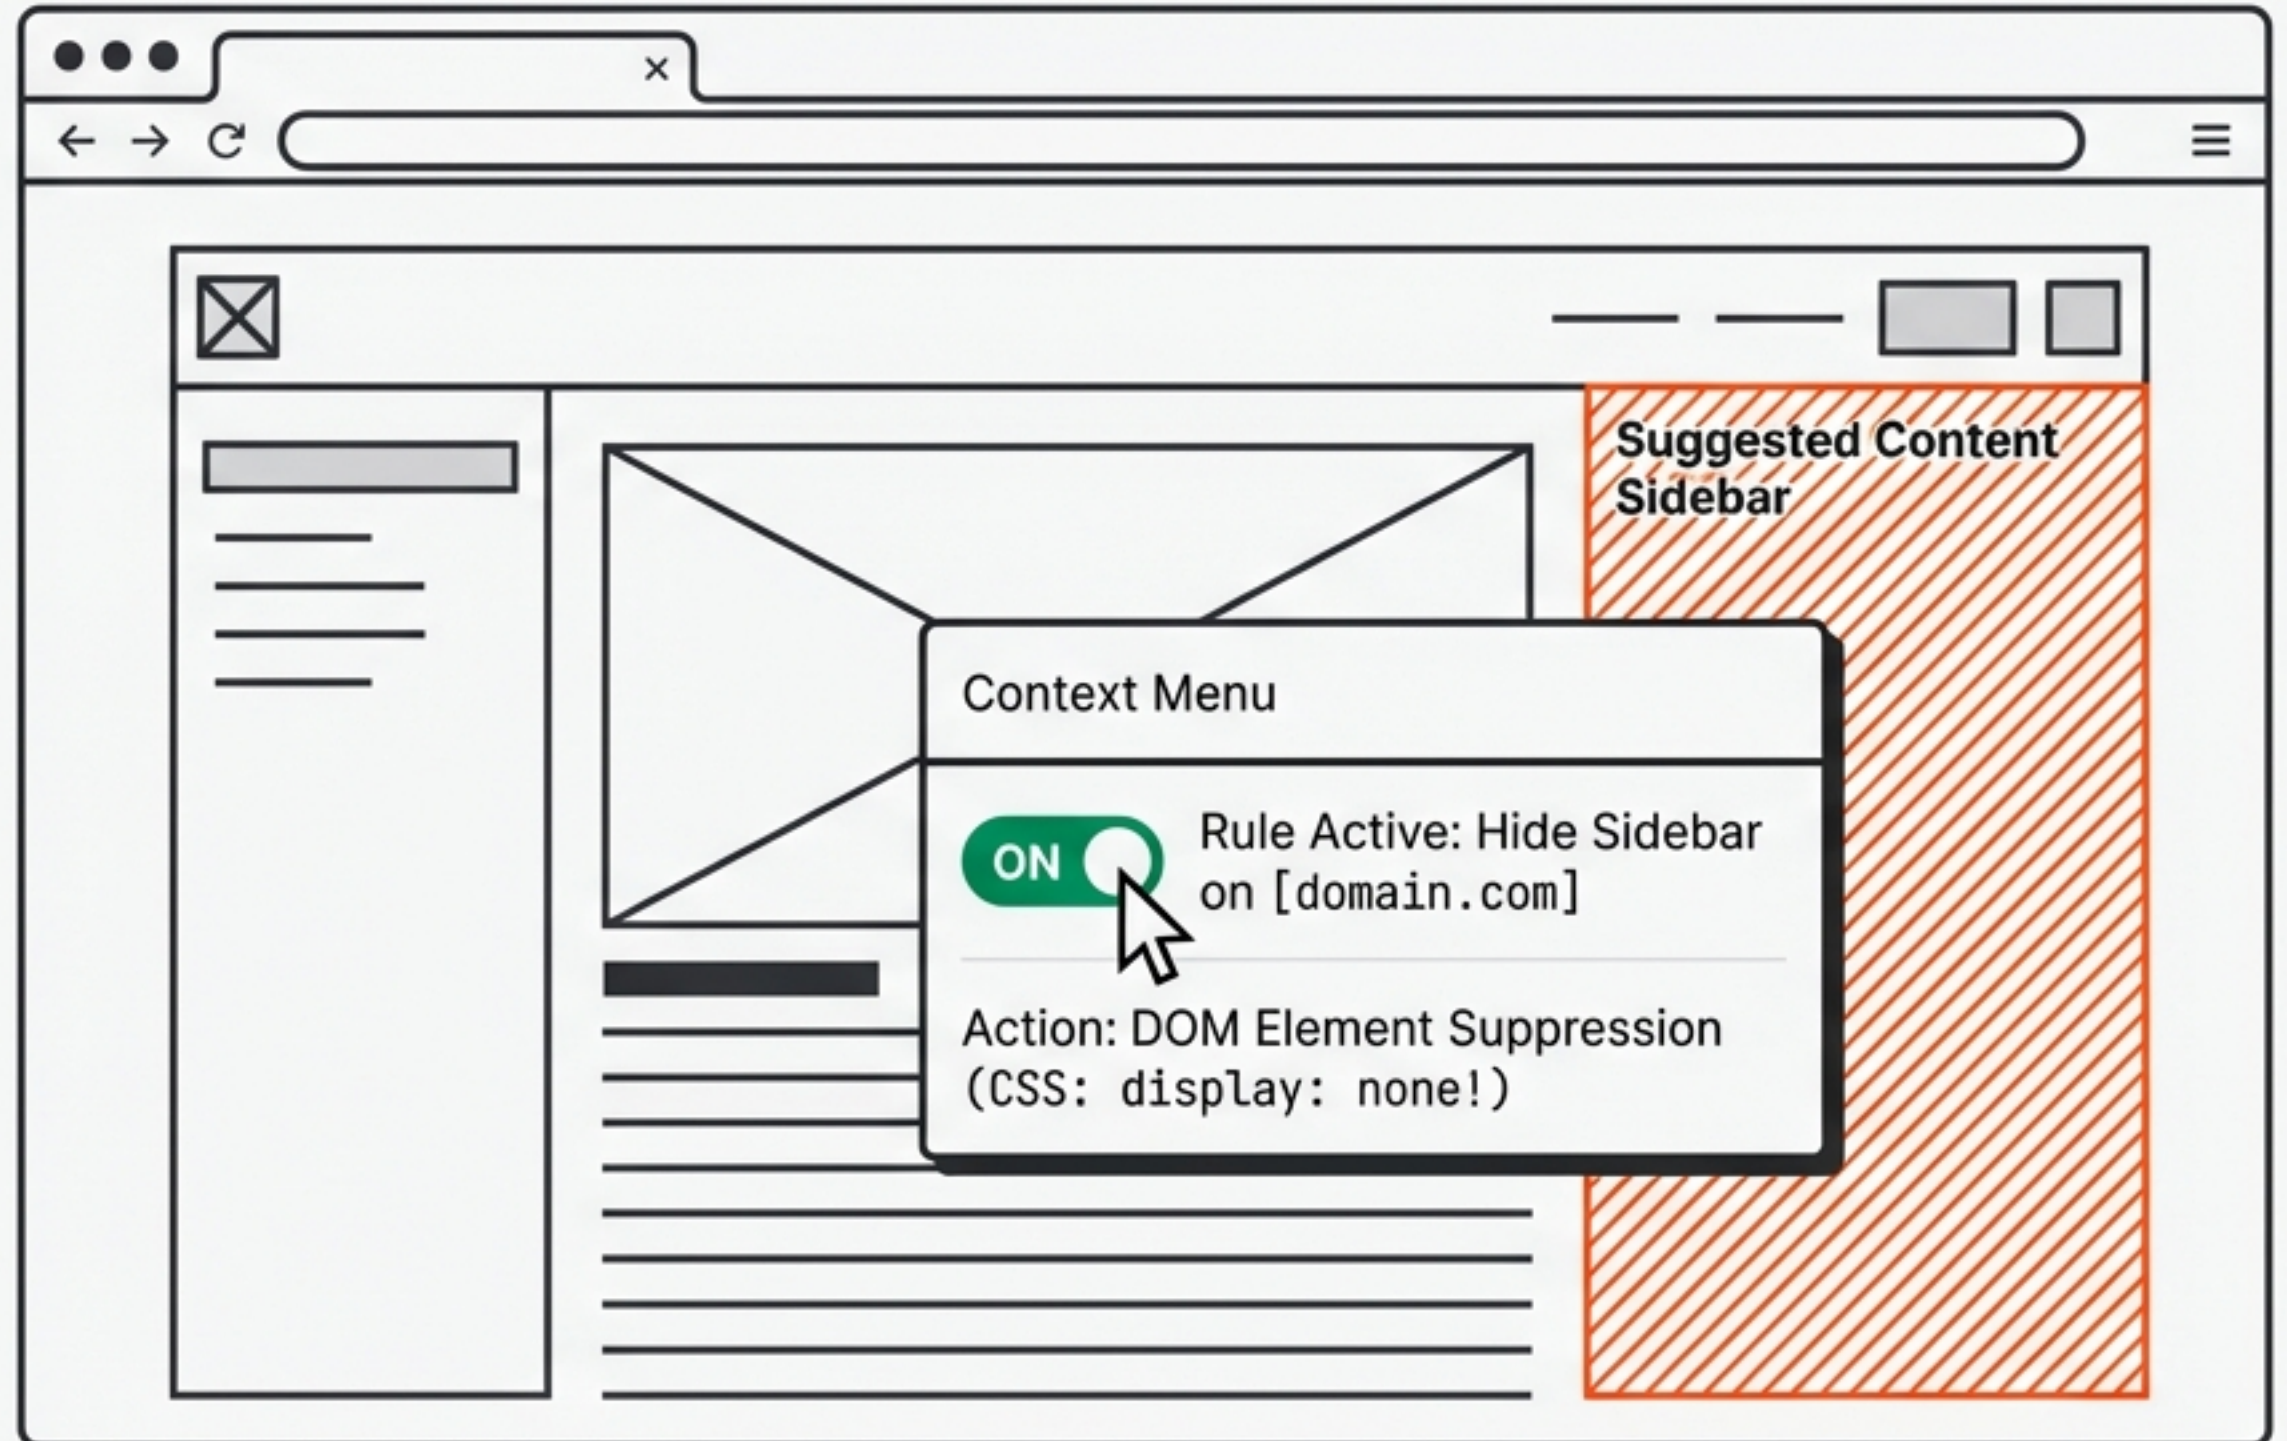

Value Proposition: Instant gratification, mass appeal, reduced bounce rates.

UC-11 [PRECISION]: Giving Power Users Control, Not Magic

The User Problem: Power users do not trust AI to guess; they want to define the rules themselves.

User Story: “As an admin, I want to hide the Suggested Content sidebar on all intranet pages, always.”

Key Concept: Deterministic behaviour builds trust.

UC-11 Implementation: The Configuration Interface

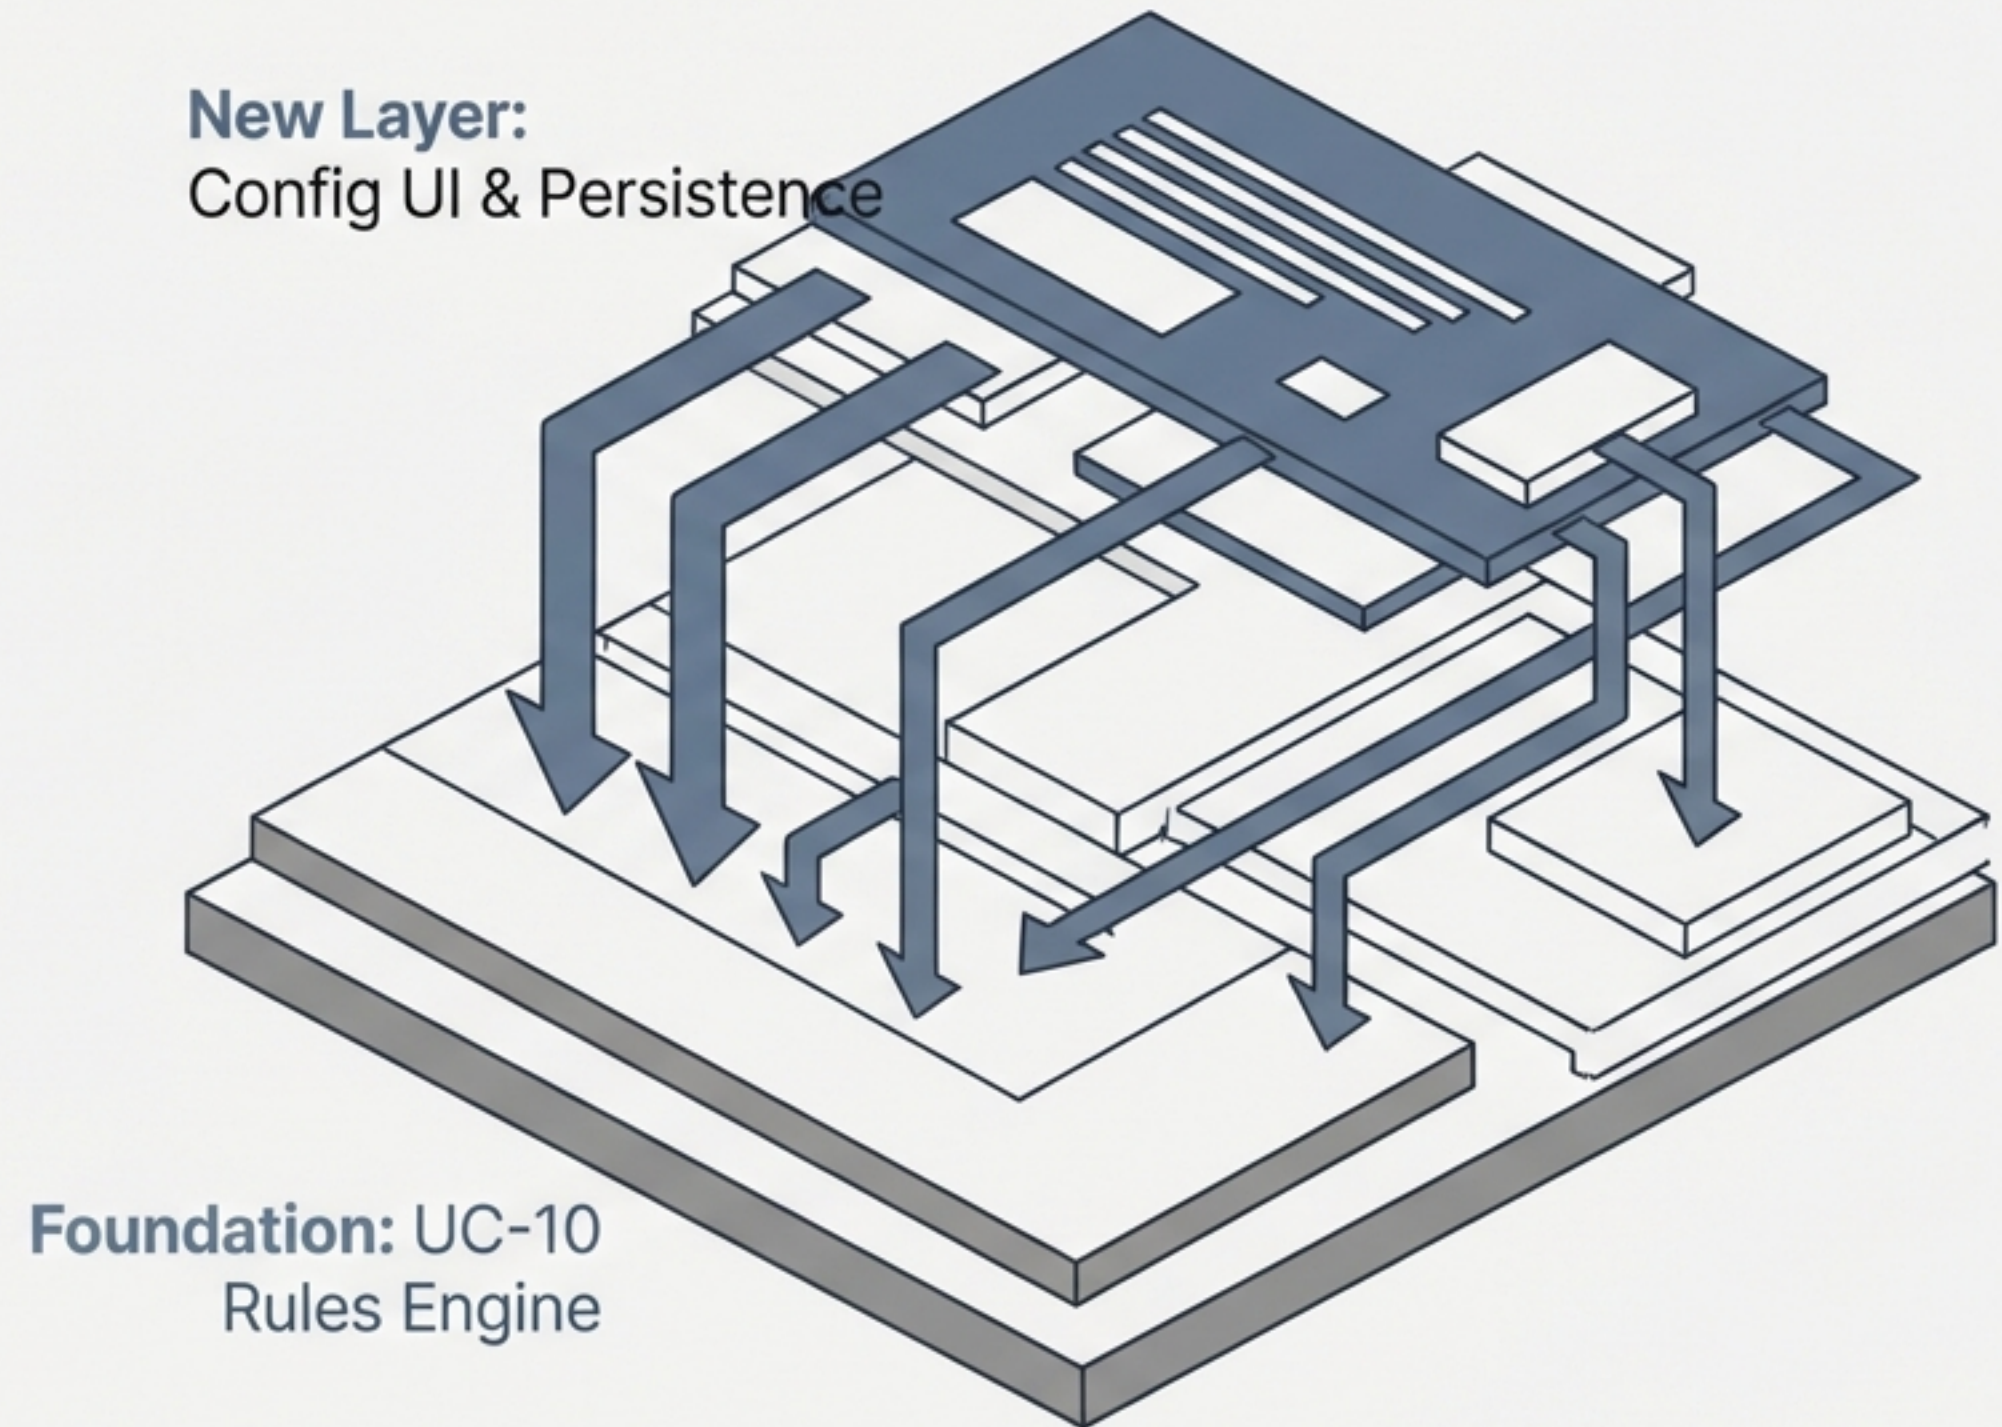

Specs

Tech Stack: React / Config UI

Timeline: 3-6 Weeks

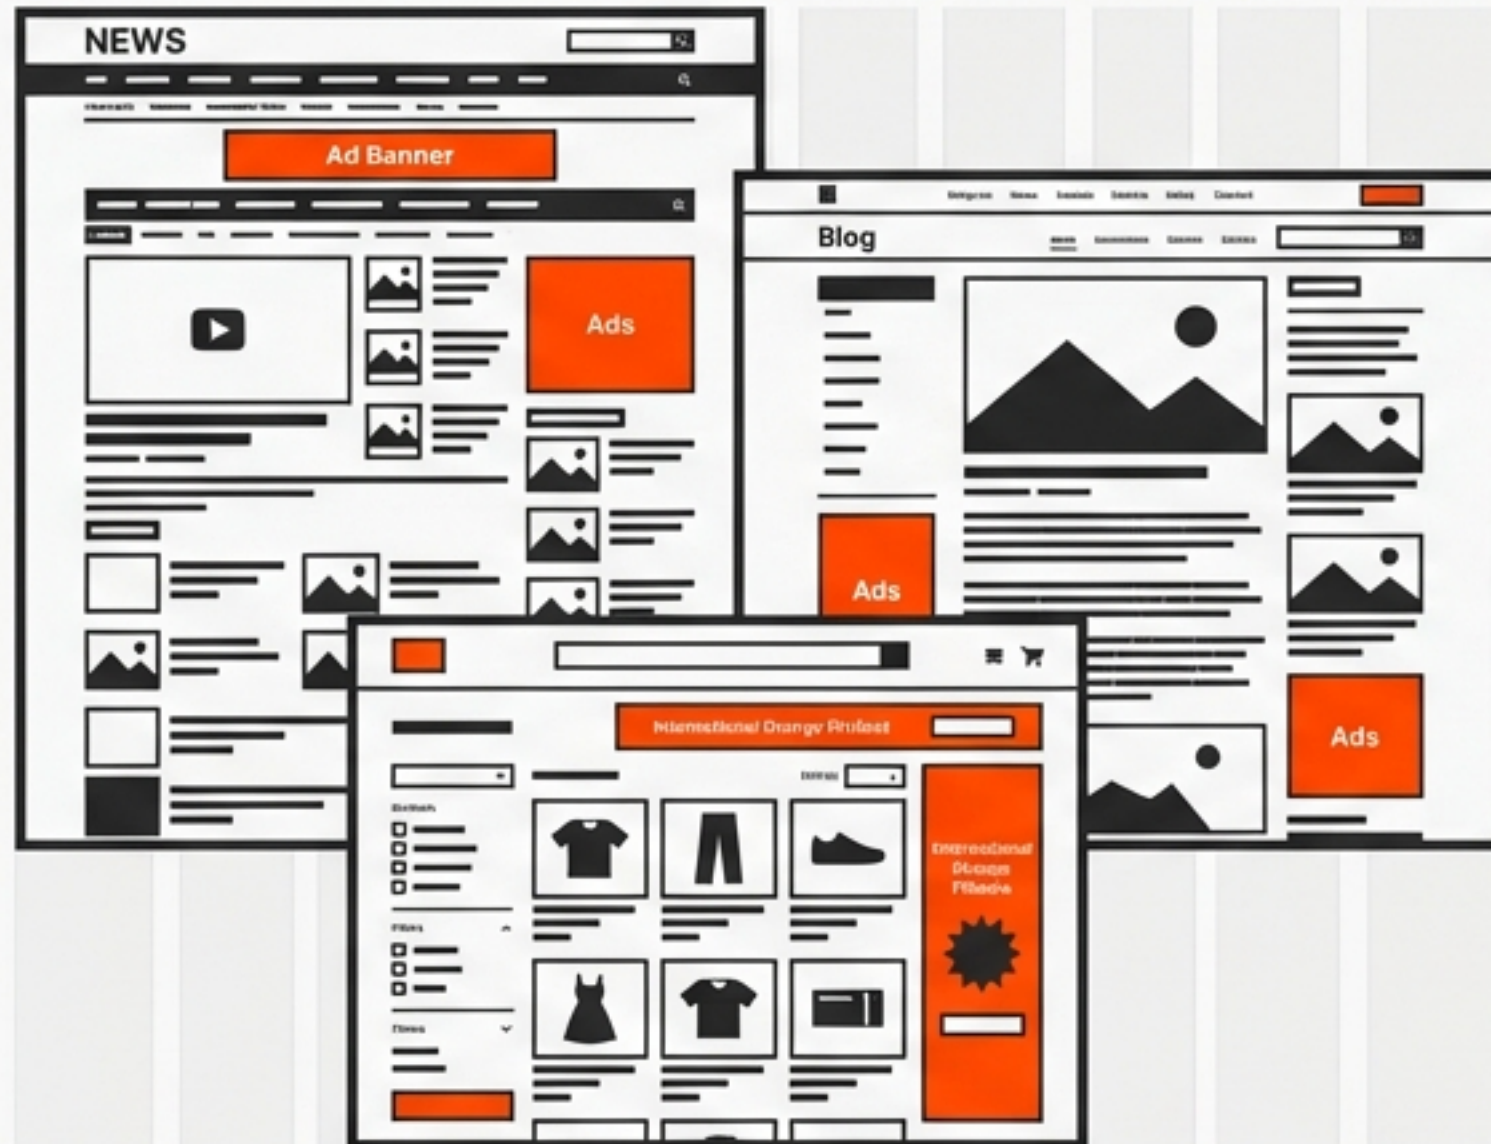

Effort: Medium-High

Value: Retention, Stickiness, Trust

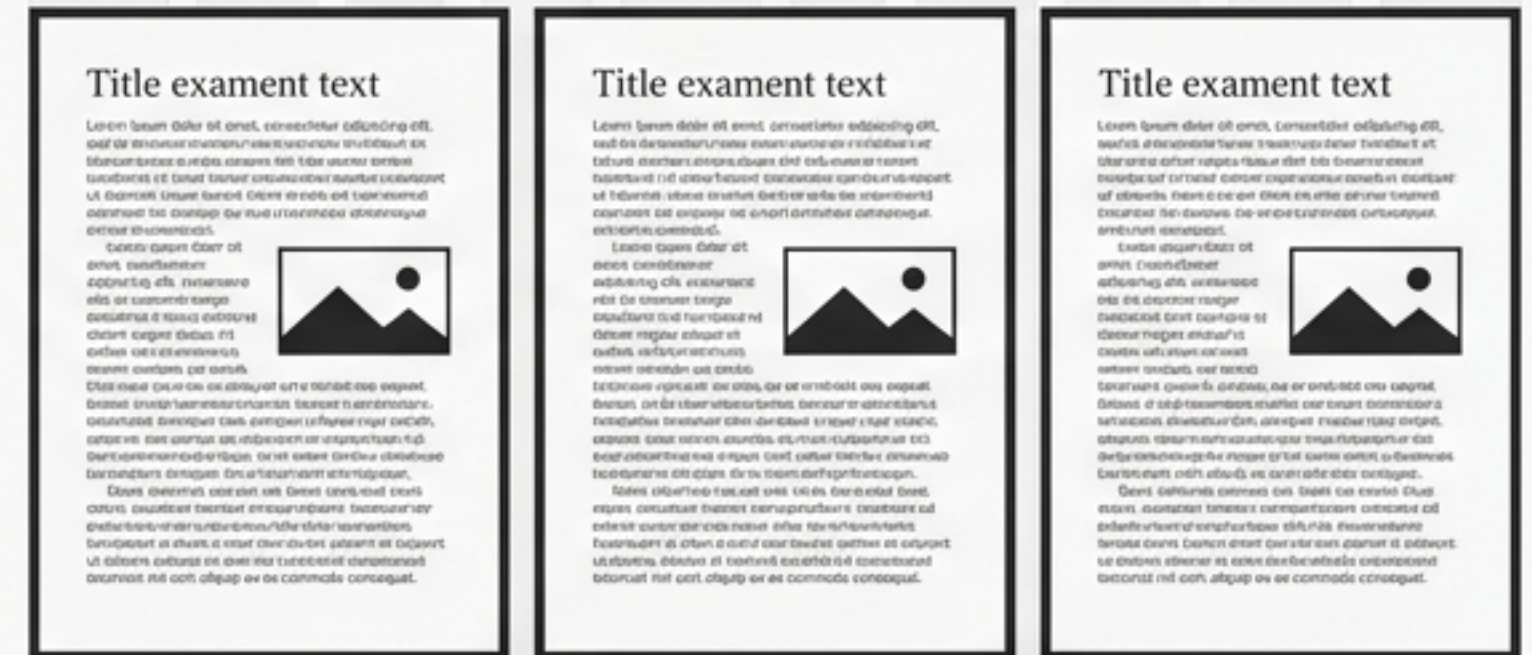

UC-12 [READER]: Standardising Chaos for the Researcher

Transforming the web into a library.

Inconsistent Web Layouts
Inter Regular

Standardised Flat UI
Inter Regular

Target Audience: Researchers, Archivists, Information Professionals.
Inter Regular

UC-12 Implementation: The Template System

Transforming content via a complex, proprietary re-rendering engine.

Technical Requirement:

A complex "Template System" capable of extracting core content and re-rendering it into a completely new, proprietary DOM structure.

Inter Regular

Development Effort:

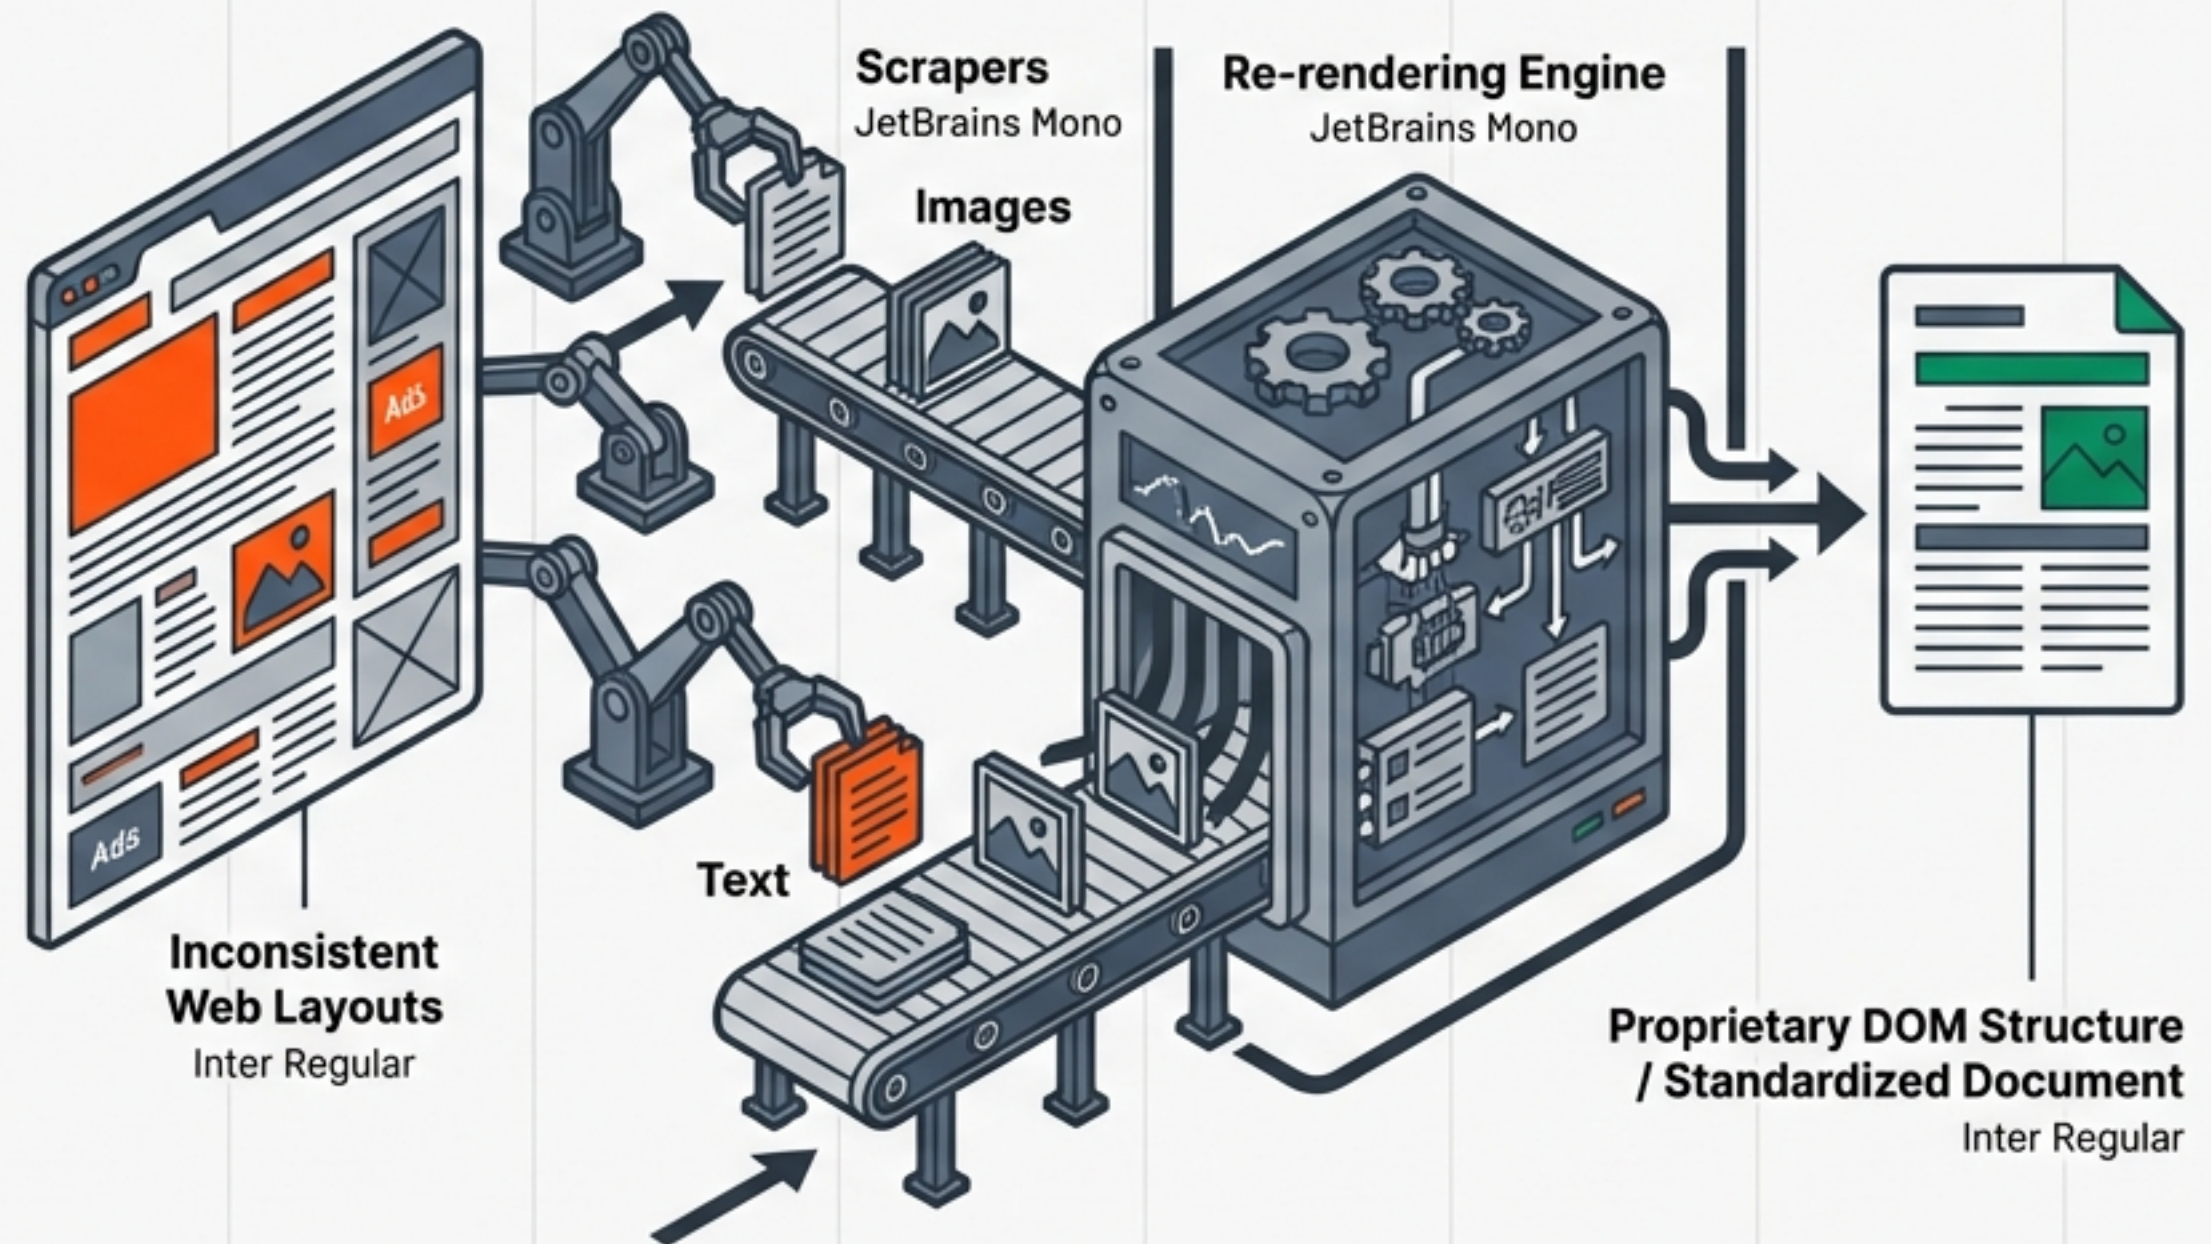

High (Tier 4).

Timeline:

2-3 Months.

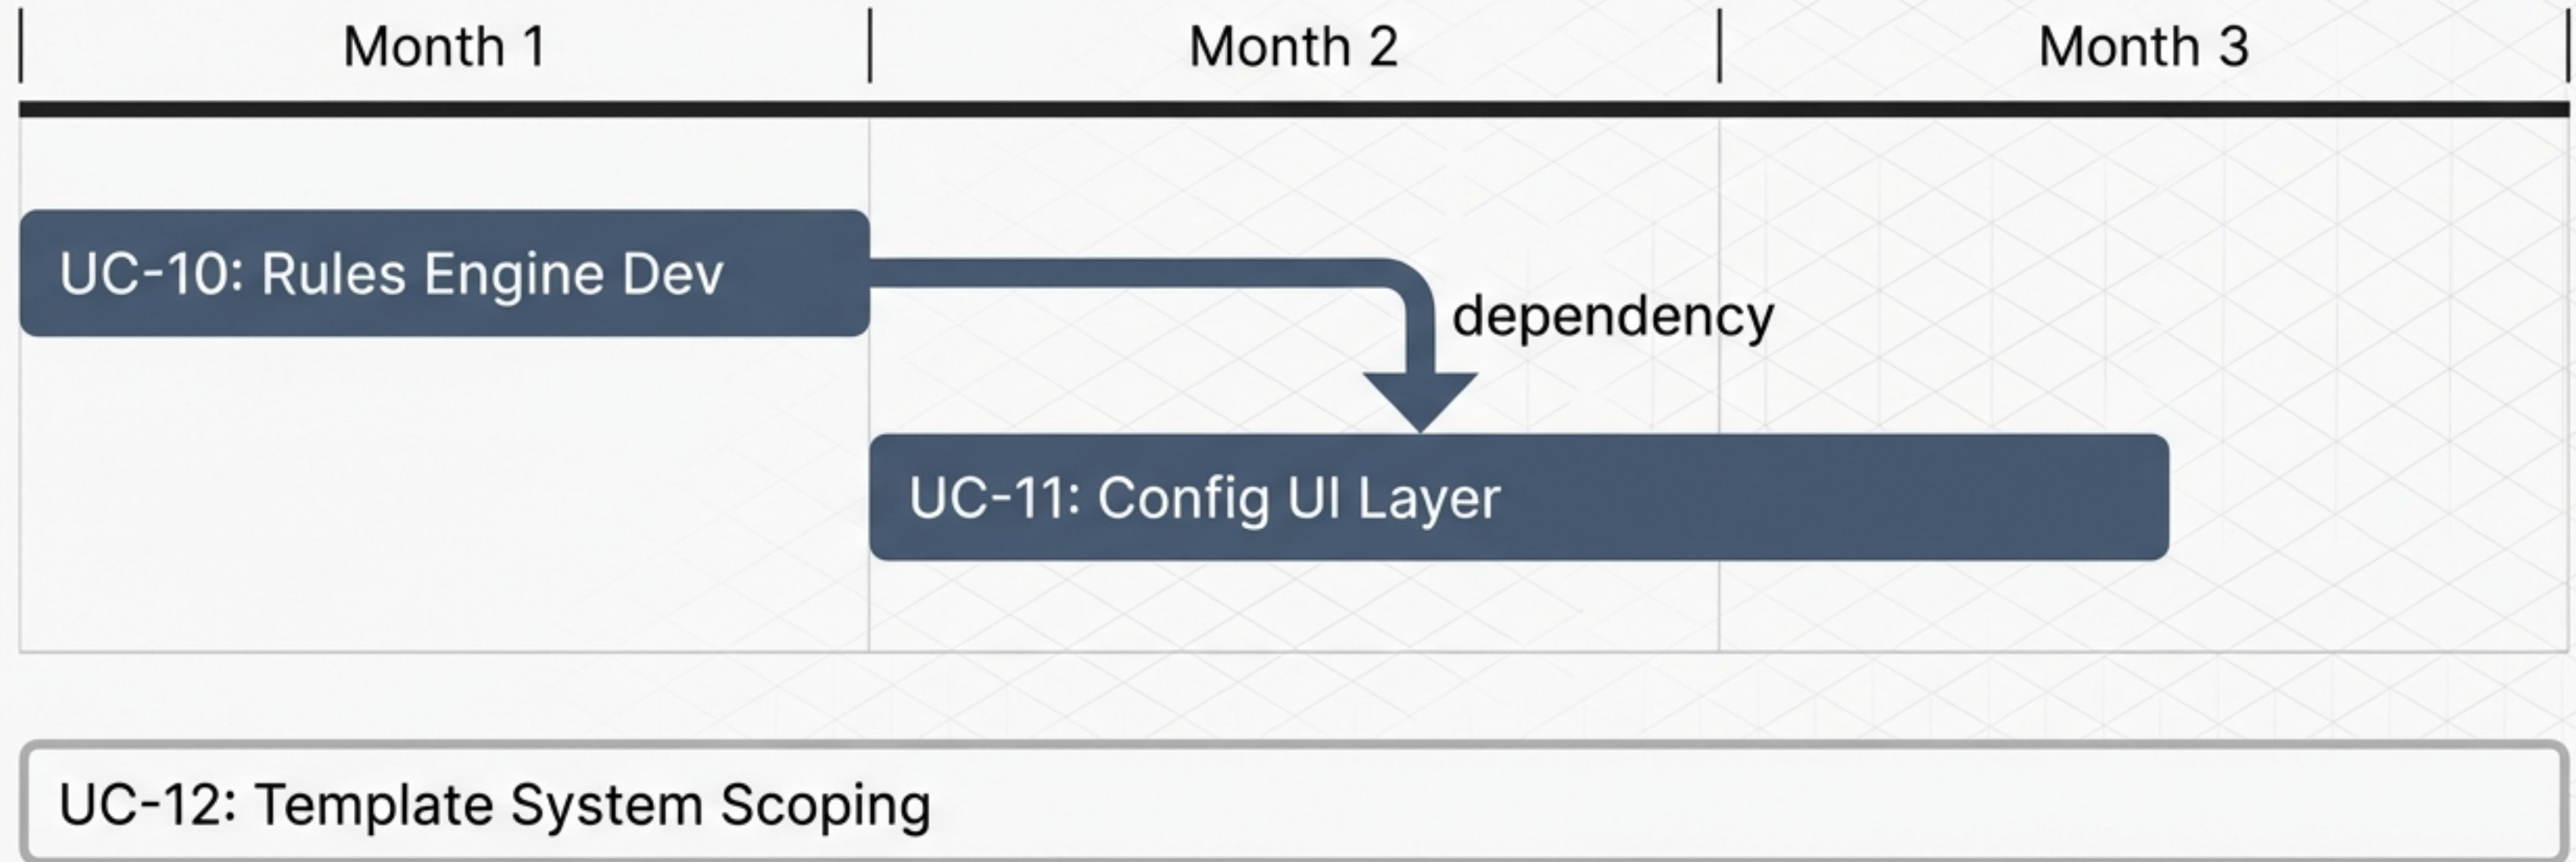

Independent
resource-intensive
track.

Comparative Feature Matrix

Codename	Target User	Key Tech	Timeline	Primary Value
UC-10 CLEAN	Casual Reader	Rules Engine	2-4 Weeks	Nuisance Removal
UC-11 PRECISION	Power User	Config UI	3-6 Weeks	Mechanical Control
UC-12 READER	Researcher	Template System	2-3 Months	Layout Standardisation

Technical Roadmap & Critical Dependencies

Inter Regular

UC-10 is the foundation for UC-11. UC-12 is an independent, larger track.

Priority Recommendation & Next Steps

1

IMMEDIATE: Greenlight UC-10 (CLEAN)

Low effort, high impact. Serves as the technical foundation for future tiers.

2

SECONDARY: Begin UI Scoping for UC-11

Prepare designs now so development can begin immediately after the Rules Engine is live.

3

STRATEGIC: Evaluate Capacity for UC-12

If the Research vertical is a priority, staff a parallel workstream now.

“By moving from prompts to platform engineering, we evolve from a clever wrapper to an essential productivity tool.”
