

The Data Room

Product Brief v0.5.10

Date: 21 Feb 2026

Internal Distribution: Ambassador,
Sherpa, Architect, Developer,
DevOps, Designer, Accountant

The Pivot: From Capability to Commercial Product

The PKI MVP is complete. We have the foundation.
Now we build what customers actually buy.

Phase 1: PKI MVP

The Trigger: Investor Group 2 Request

Phase 2: Commercial Product

The Equation

A data room is a secure, branded, ephemeral environment for cryptographic access control.

The Core Philosophy: The Repo IS The Product

Traditional SaaS

Rent access. Vendor owns the data.

The Data Room

Buy the asset. Customer owns the repo.

- Version Controlled & Auditable
- Durable (Exists without our servers)
- Owner Controlled

The Business Model & Billable Units

The Repo

Monthly fee.
Includes config,
DNS, branding.
(Recurring Revenue)

Compute

Metered EC2
hours.
Billed per use.
(Usage Revenue)

Storage

Encrypted S3
volume.
TTL-based.
Billed by volume.
(Usage Revenue)

Seats

Optional user
licensing per
directory entry.

Marketplace compatible: AWS/GCP one-click deployment.

The Economic Advantage: Ephemerality

When you aren't using it, it costs nothing.

The User Journey: Investor Experience

From branded URL to encrypted messaging in 30 seconds.

The Directory: A Trust Graph

Identity Split.

Directory = JSON file in Repo.

Revocation = Git commit
(remove persona from JSON).

Agents in the Room

AI Agents are first-class citizens. They possess their own key pairs.

You can encrypt messages specifically for an **AI agent's eyes only**.

Market Differentiation

Feature	Legacy/Competitors	SG/Send (Our Solution)
Privacy 	Dropbox/Google They see your files. 	SG/Send Blind. We see nothing. 
Control 	Email Forever. Un-revocable. 	SG/Send Revocable instantly. 
Asset Model 	Legacy (Intralinks) Rental. Static. 	SG/Send Ownership. Ephemeral. 

We offer the ownership of a physical vault with the convenience of the cloud.

The Strategy: Show, Don't Tell

Target: Investor Group 2

- We are not pitching a slide deck.
- We are **delivering the product itself.**
- Script: "Here is YOUR data room. It spins up in 30 seconds. Your documents are already inside."

The Minimum Viable Demo (MVD)

1. ☐ Human creates Repo + Config
2. ☐ System generates branded URL
3. ☐ Human adds Contacts (Investor Personas)
4. ☐ Human uploads Review Documents (Encrypted)
5. ☐ Investor visits URL & Authenticates
6. ☐ Investor views Directory & Files
7. ☐ Investor sends Encrypted Message back
8. ☐ Visualise the ephemeral EC2 instance spinning up

Architecture: The Fleet Manager

Goal: One-click deployment.

Ambassador Briefing: The Pitch

Ownership. It's a GitHub repo you own.

Security. We provide encryption & access control.

Efficiency. Costs nothing when idle.

The Data Room is the product.

The Vision: The Directory IS The Registry

The Data Room is the first implementation of the Trust Graph.

Future State:
Decentralised
Key Discovery.

Build the Room. Win the Deal.
