

SG/Send for Musicians

Segment-specific workflows for modern music production.

v0.16.26

Musicians are the perfect audience for robust version control

Song_X_draft.mp3

Song_X_final.mp3

Song_X_final_v3.mp3

Song_X_ACTUALLY_FINAL_mix2b.mp3

Constant Collaboration

Relentless file passing between producers, session players, and mix engineers.

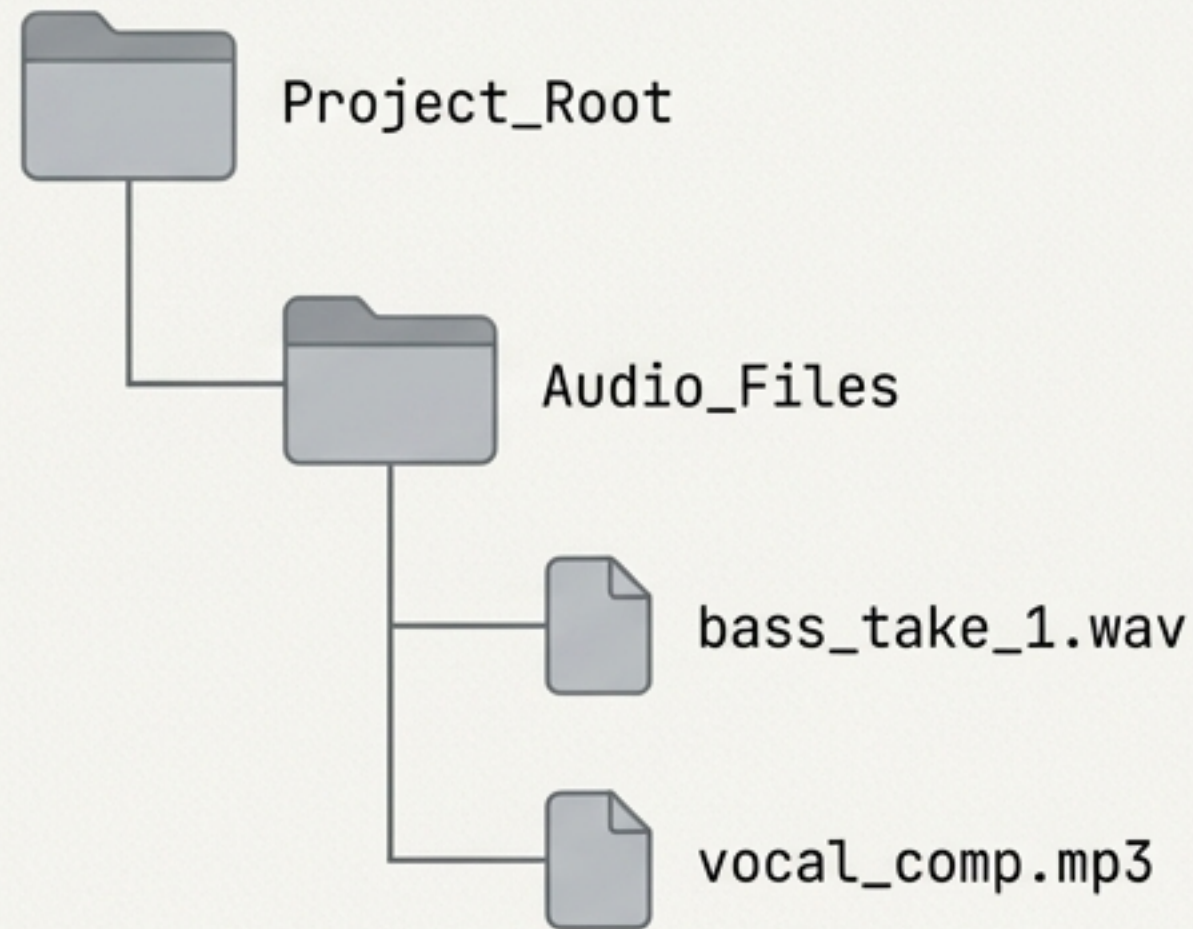

High Sensitivity

Pre-release material requires strict protection across multiple studio and mobile devices.

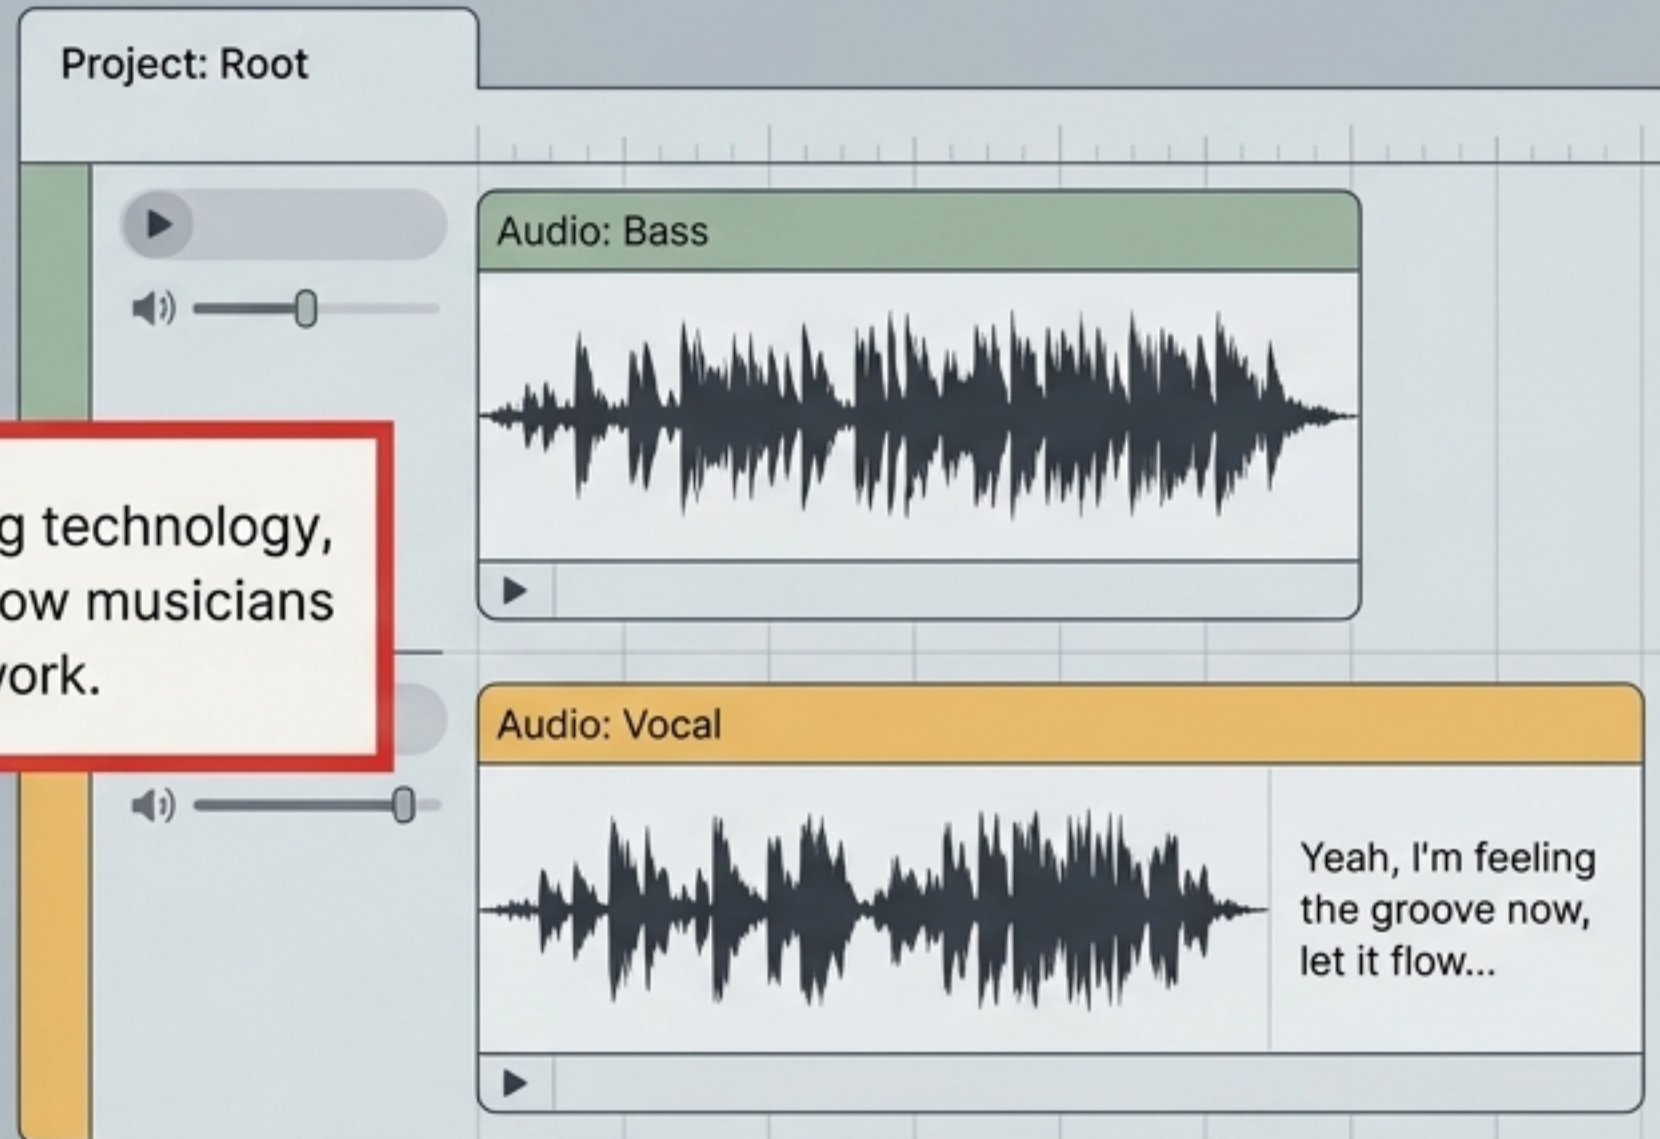

No Native Versioning

They produce endless iterations (drafts, mixes, stems) with zero structural history.

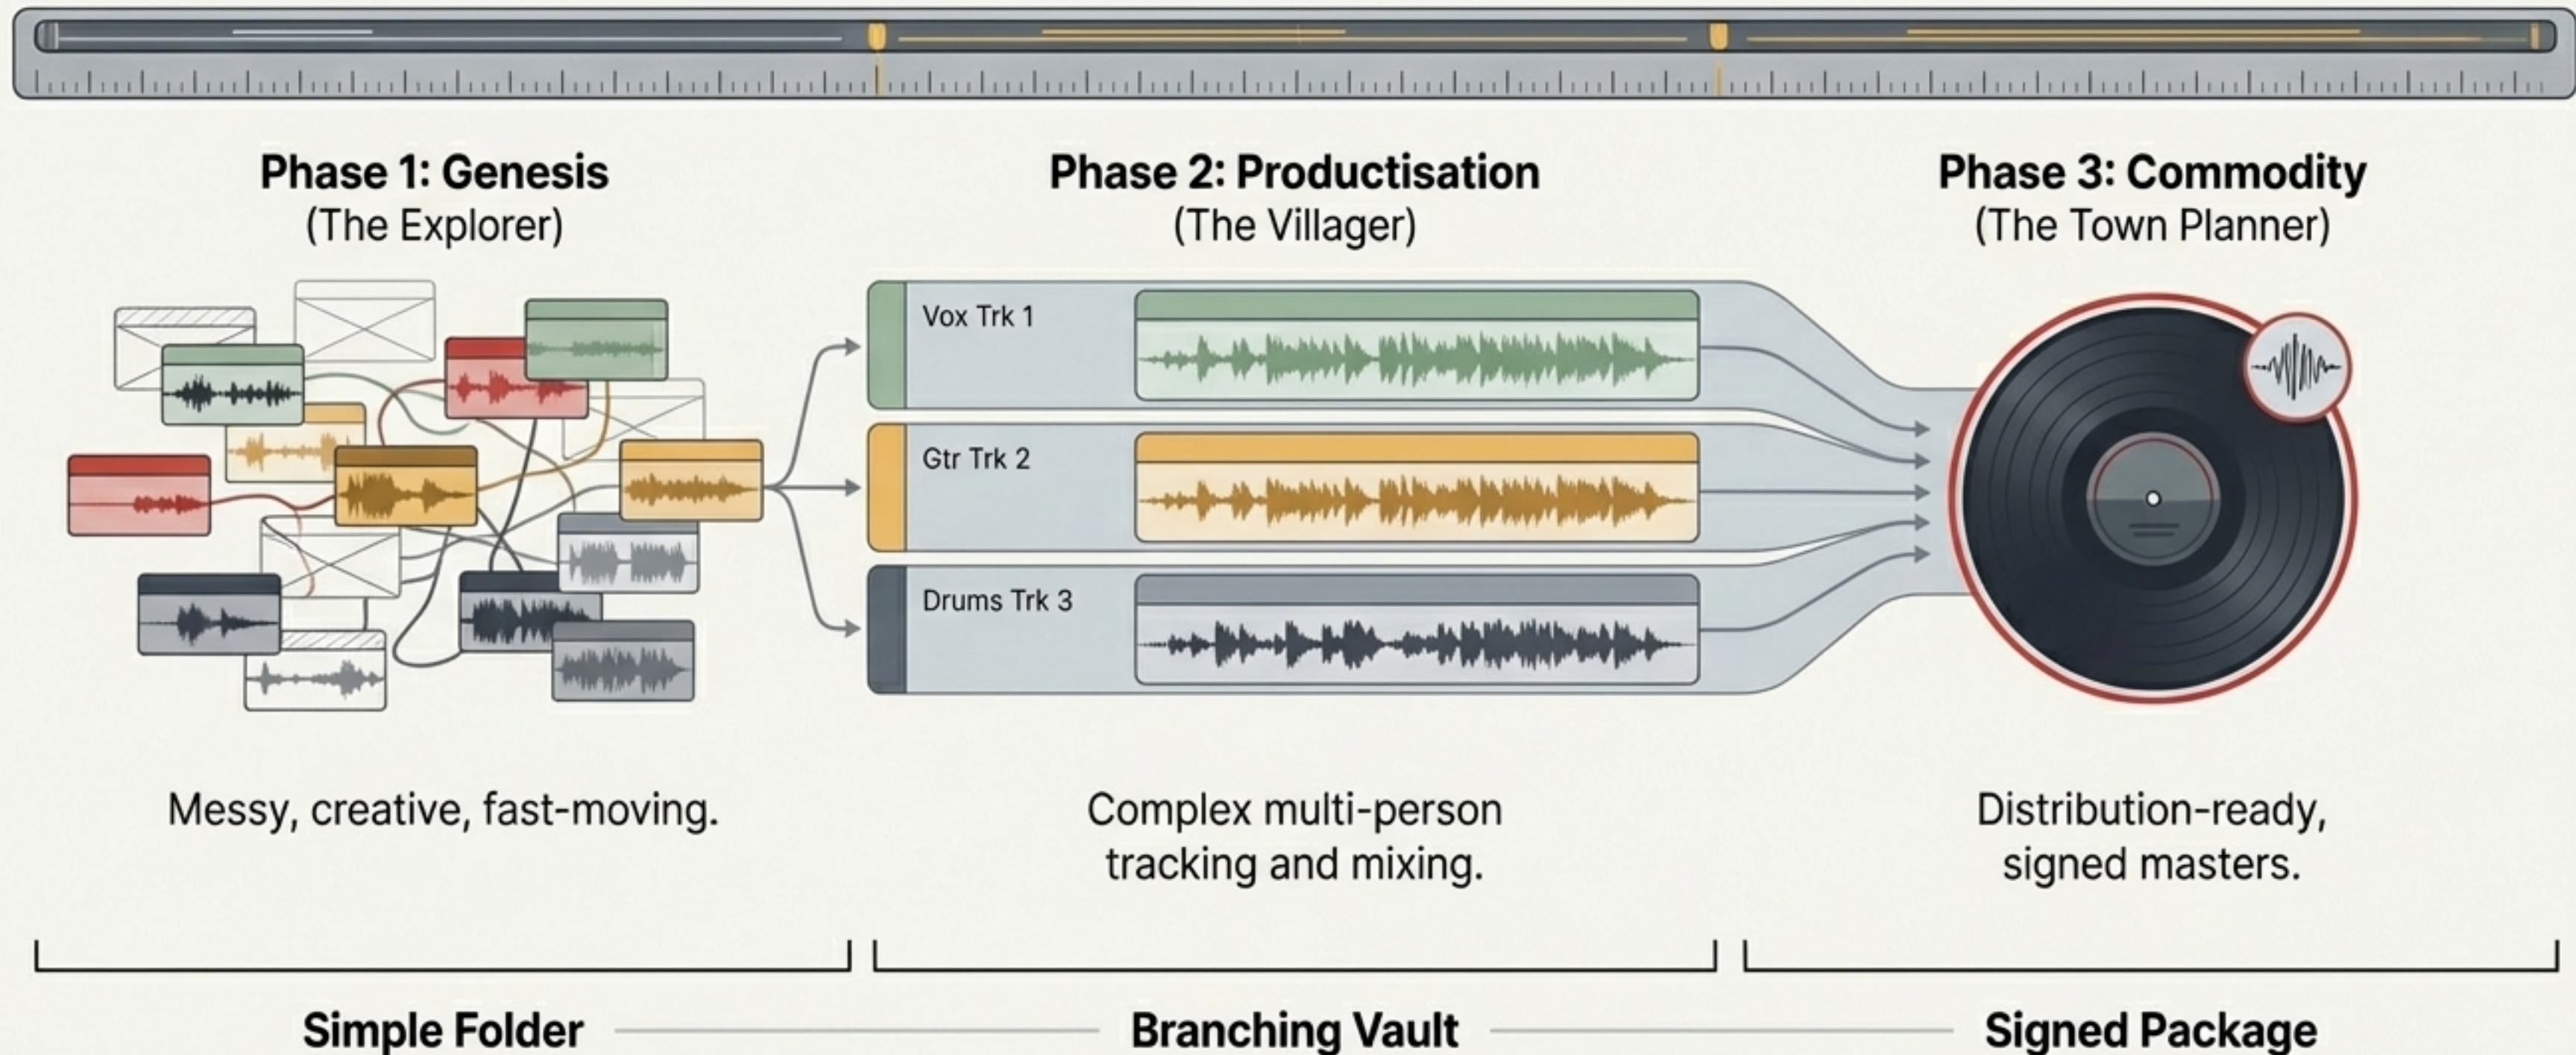

Multi-audience scaling requires a bespoke lens over the same foundation

The same underlying technology,
presented exactly how musicians
naturally work.

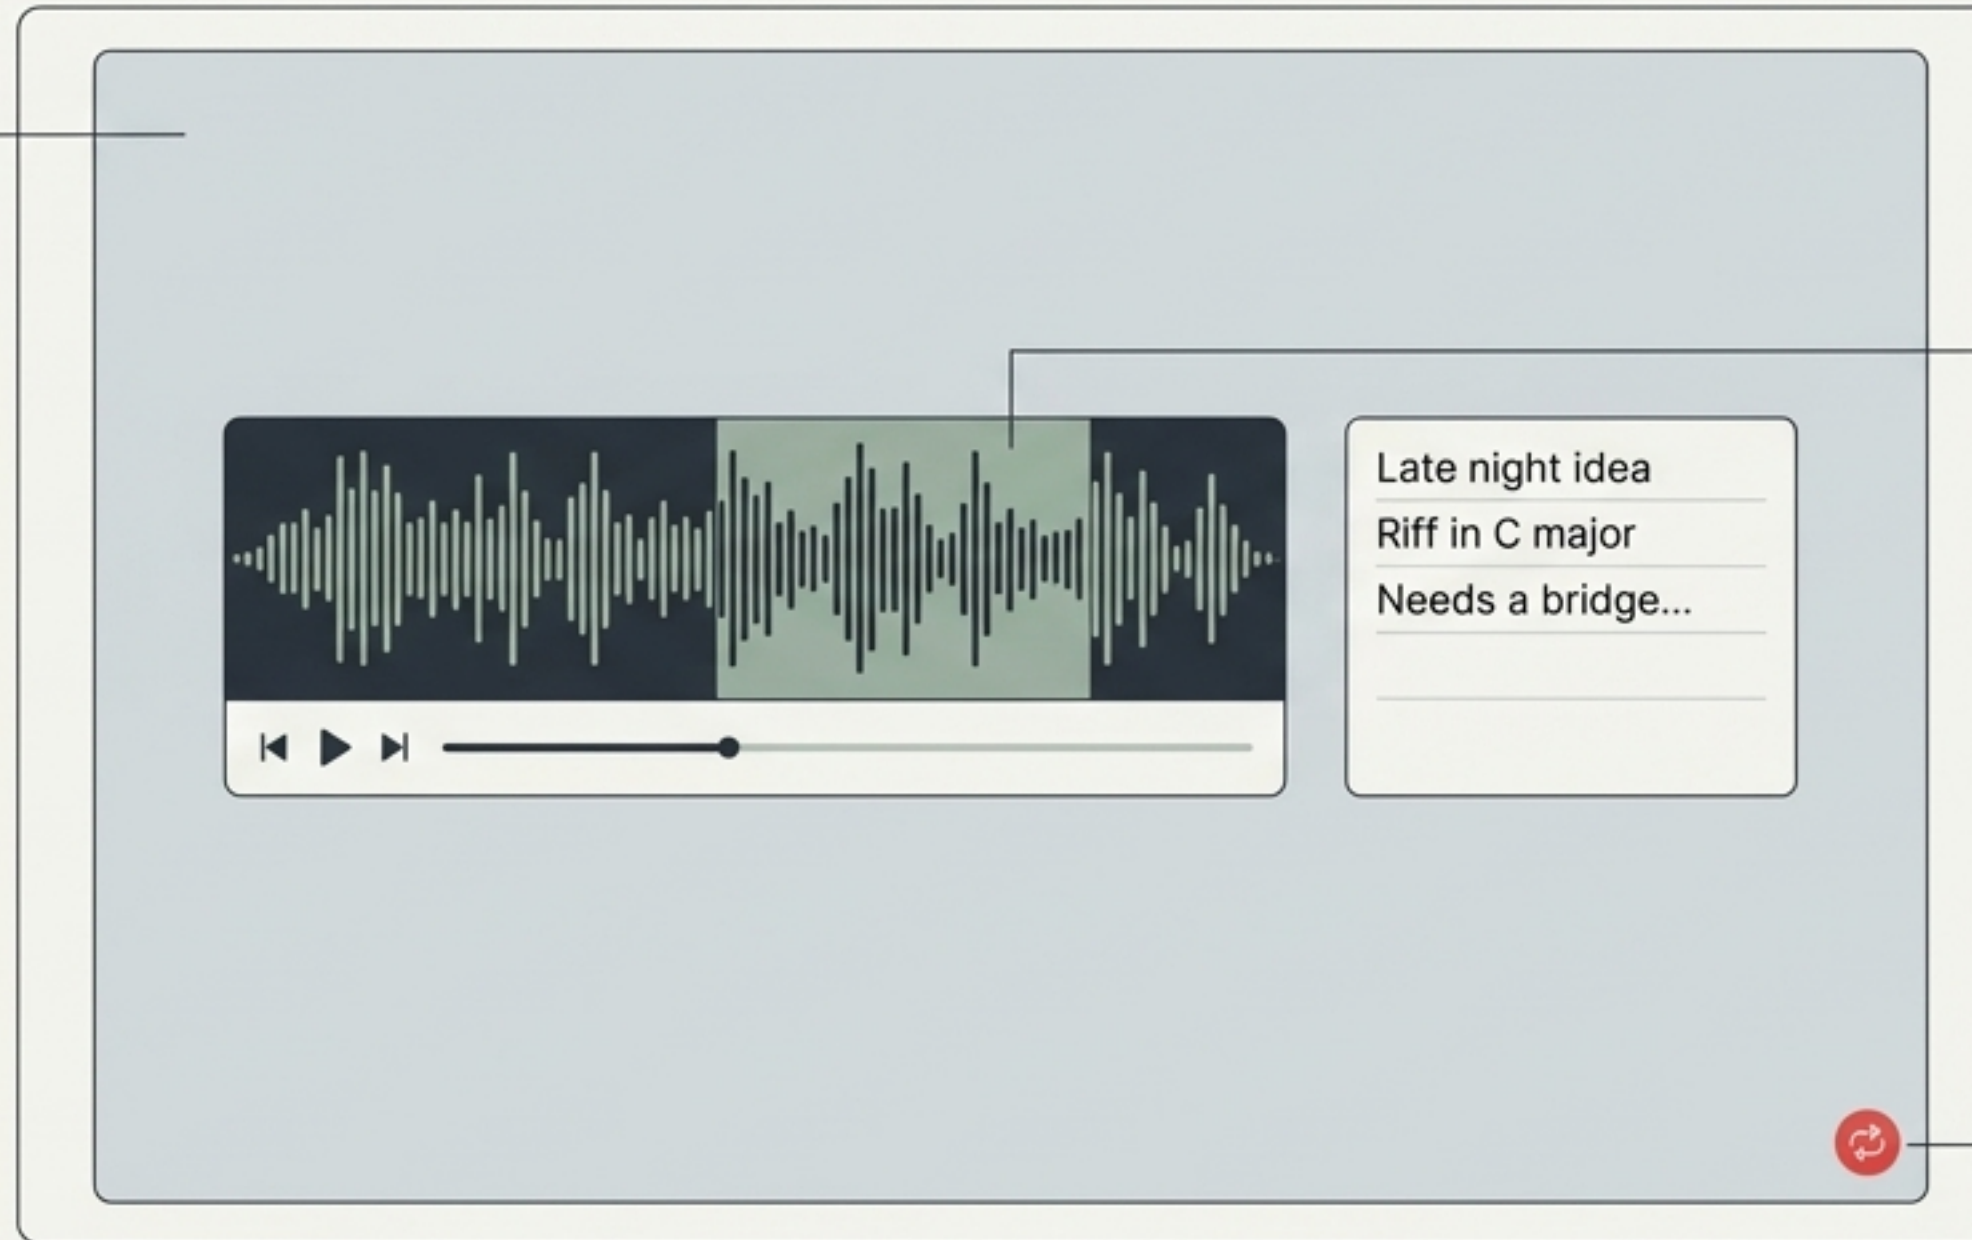

The Evolution of a Song: Mapping the creative lifecycle

Phase 1: Genesis captures every raw iteration silently

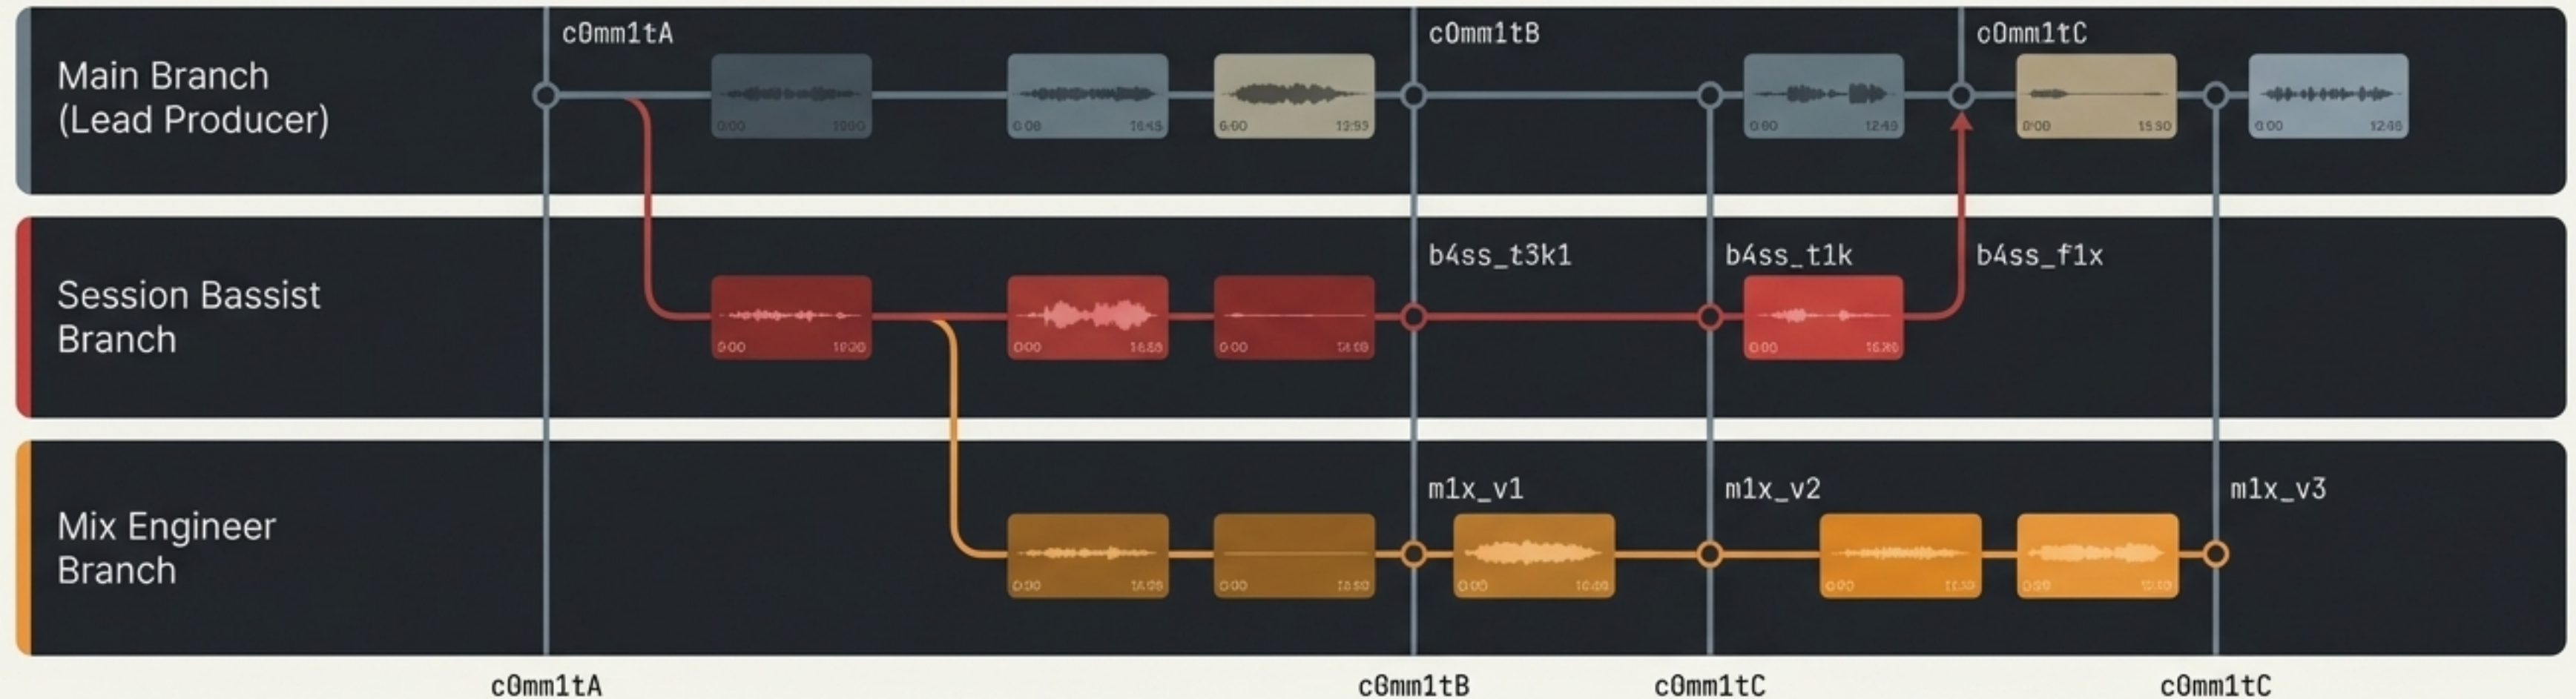

SG Primitive: A flat, loosely structured Vault.

The UI: Drop files in. Play audio inline. Add notes instantly.

The Magic (Auto-Commit): Auto-commit captures every voice memo and rough chord progression. The songwriter never loses a version, even if they never hit save.

Phase 2: Productisation introduces branch-per-musician collaboration

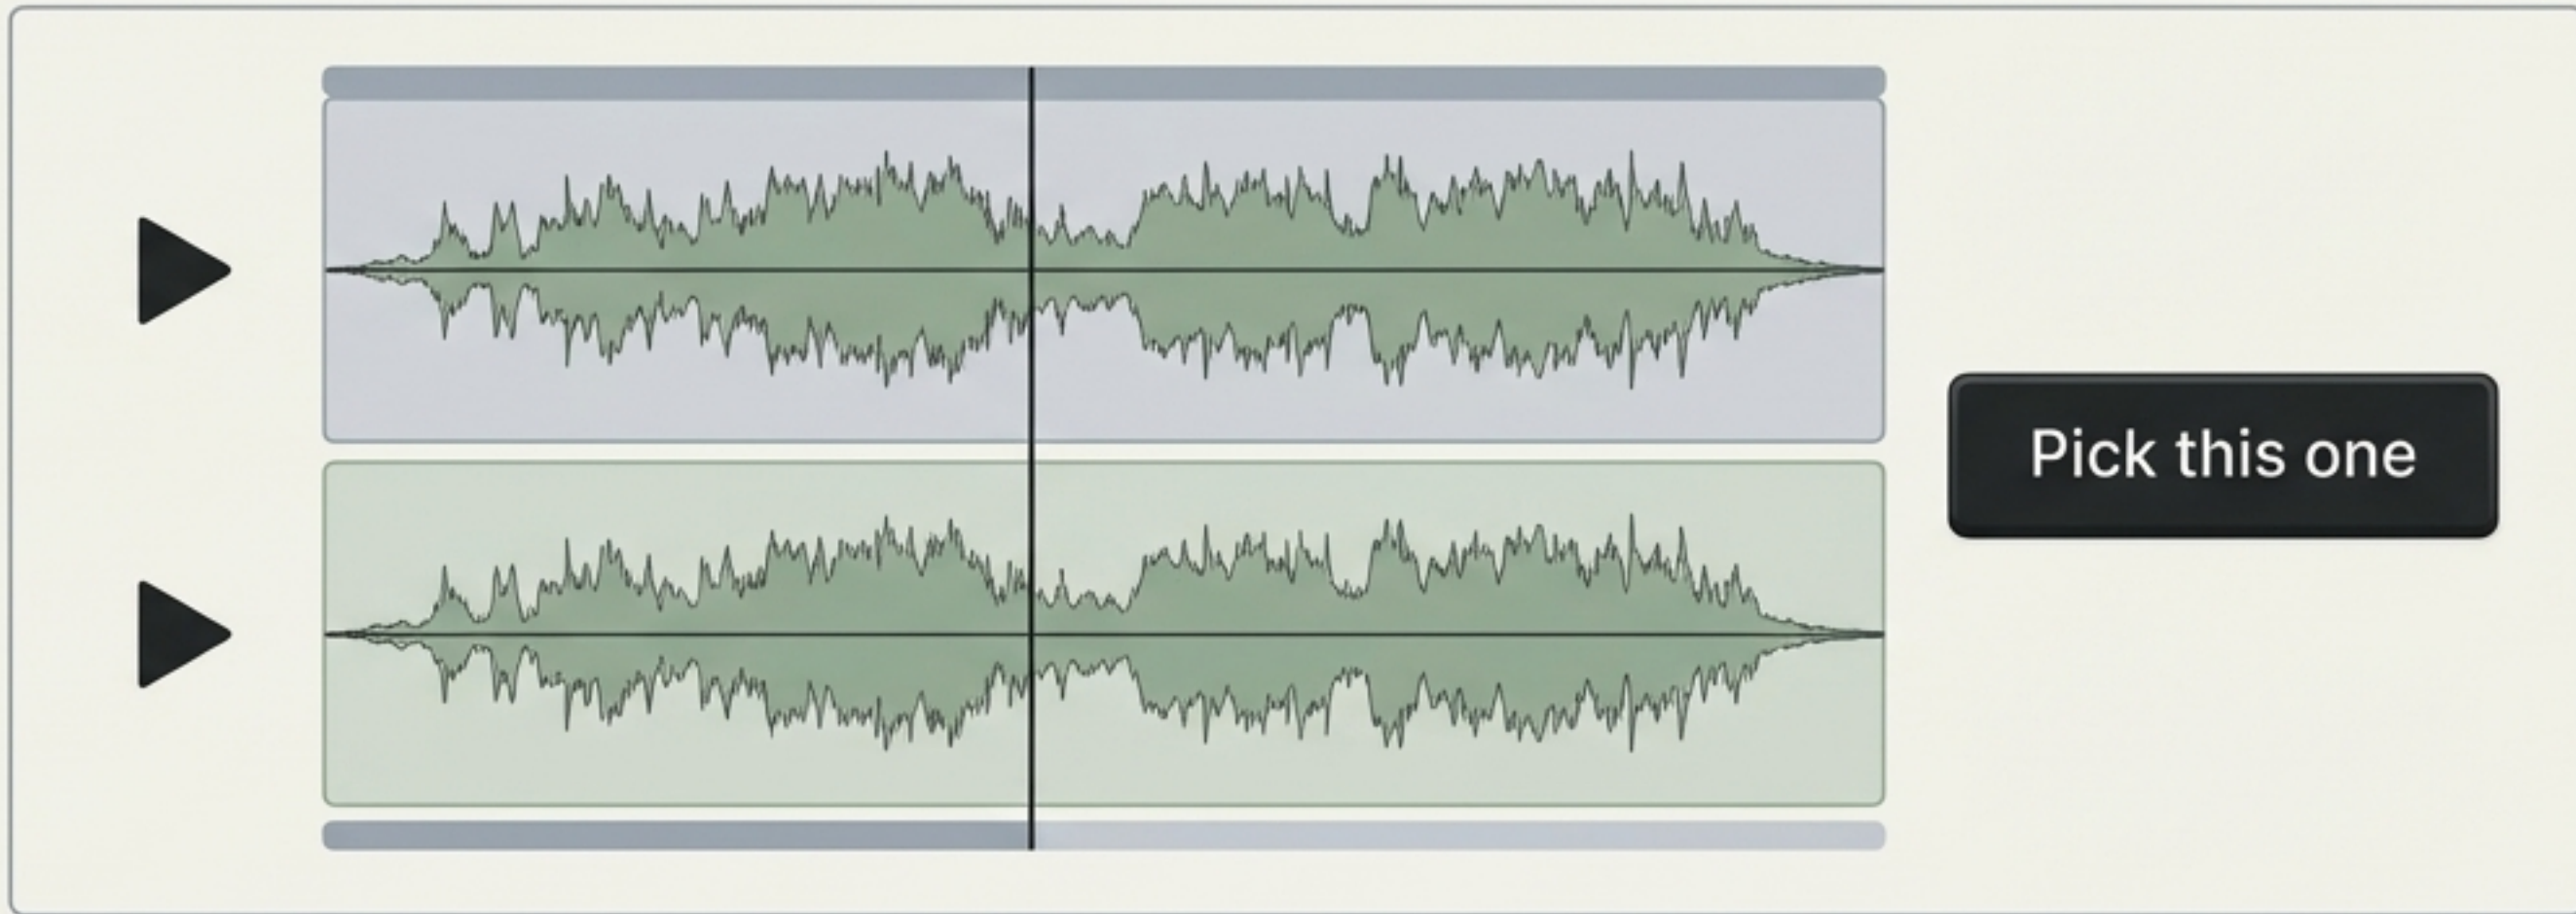

SG Primitive:

Vault with discrete branches.

The Workflow:

Every recording session is captured. No manual save-to-vault step. The desktop client syncs automatically directly from the save file.

Resolving collaboration is as simple as picking the best take

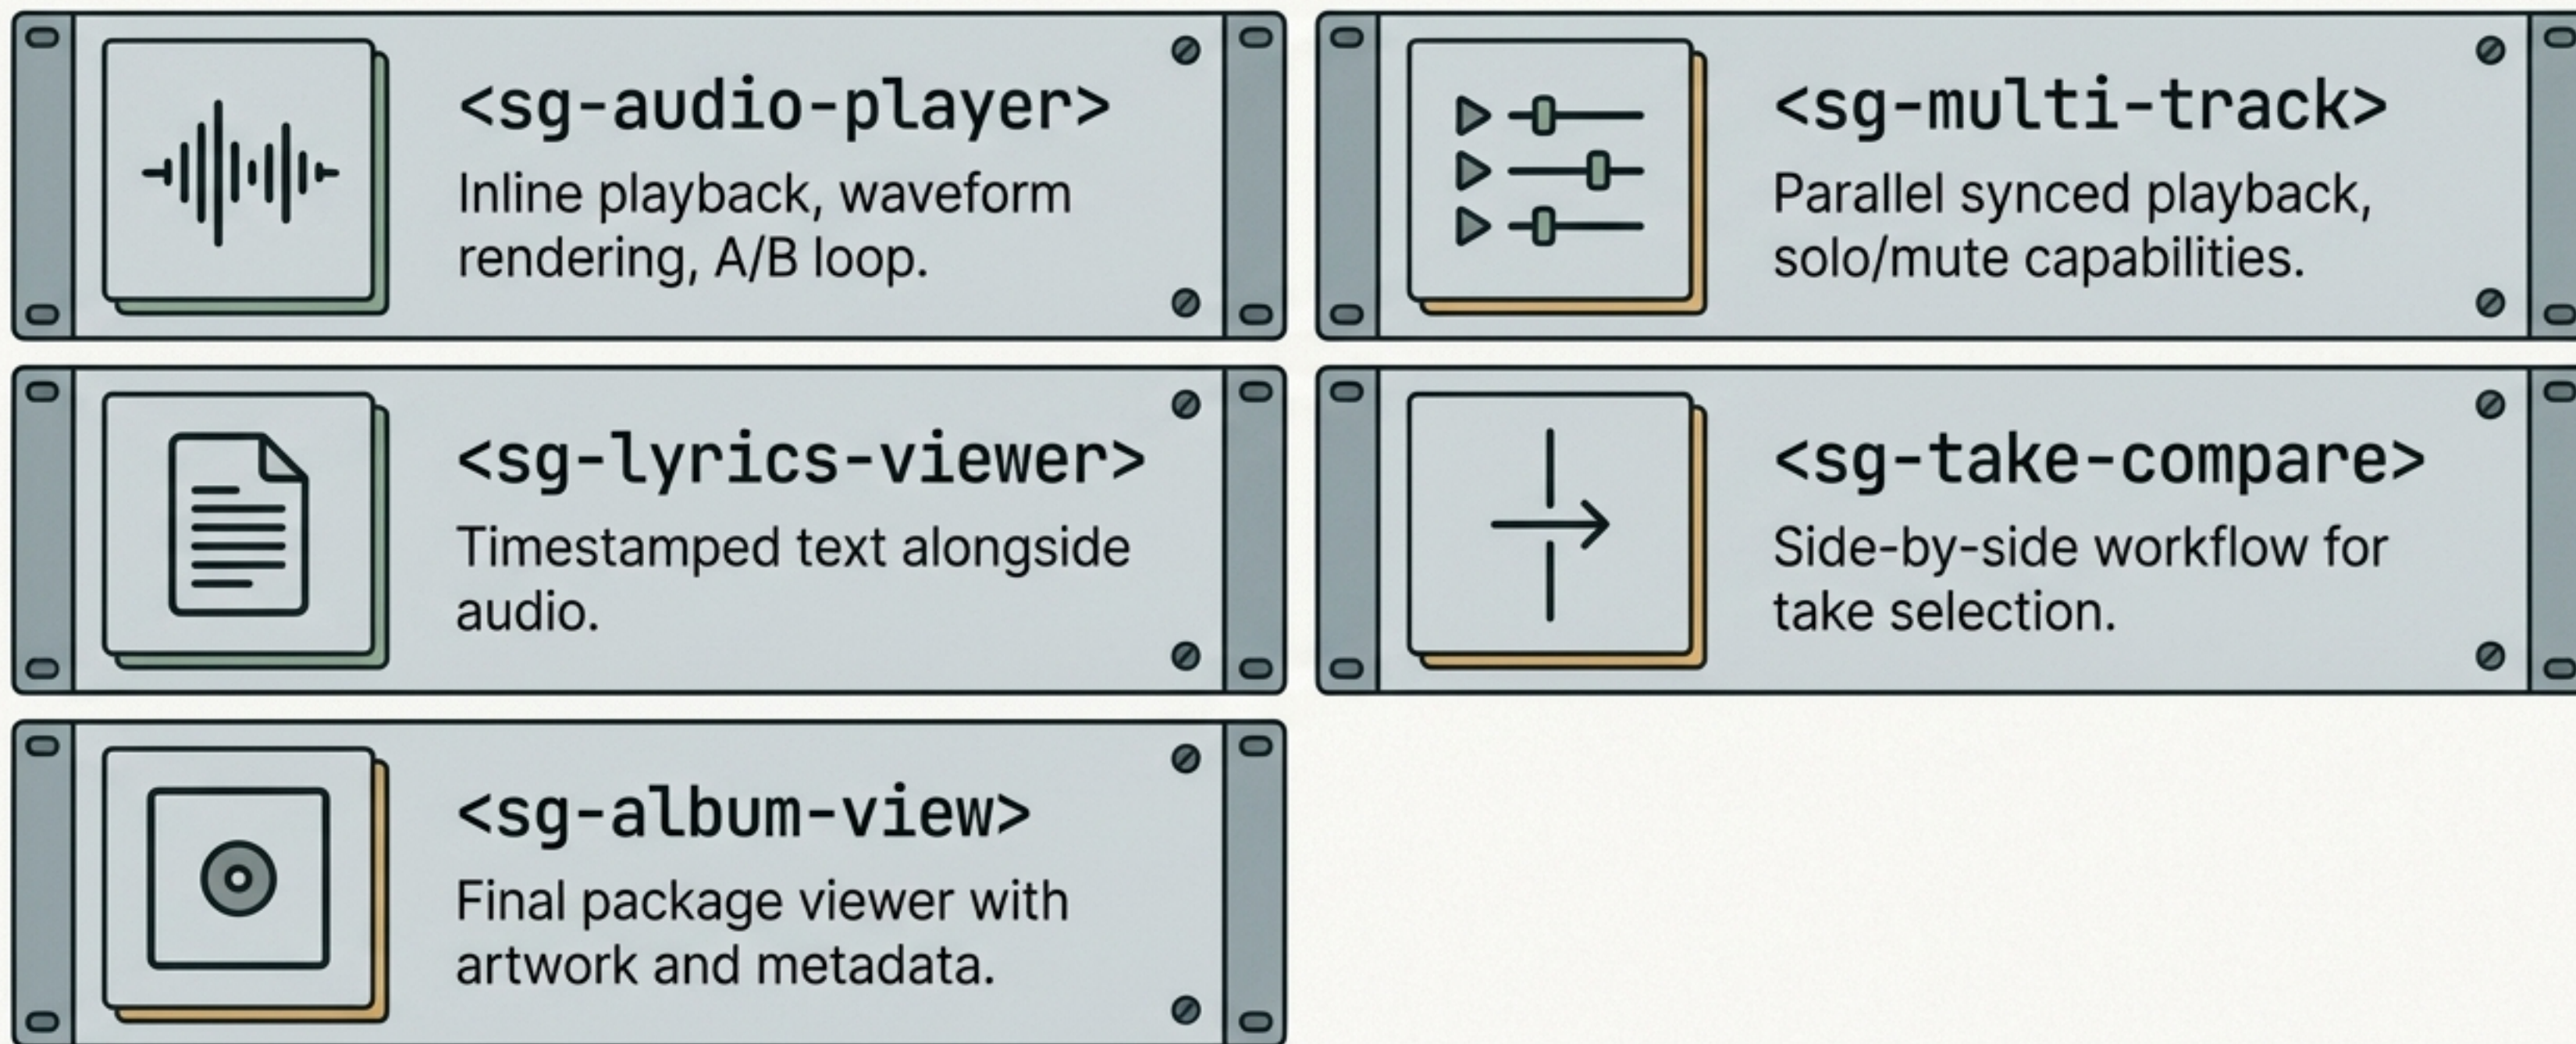

Outtakes are preserved on the original branch—there is always gold in outtakes.

Phase 3: The final master demands a polished, locked-down commodity package

Everything is versioned. Nothing is ever overwritten. Ready for the label.

The Component Toolkit: Five custom viewers power the entire experience

Matching the underlying primitive to the musical objective

	Music Use Case	Recipient UI Experience	Key Protection
Send a File	Rough demo / single take	Single <sg-audio-player>	Play-once-and-delete (Pre-release protection)
Send a Folder/Zip	Stems / session reference materials	Browse and play inline without full download	Standard secure link
Vault	Ongoing multi-track collaboration	Branch-per-musician, Auto-commit history 	Producer controls the Main merge 

Are you a musician? Pre-packaged templates remove the setup friction

Solo Songwriter

- 1 Branch
- Auto-commit
- Notes + Audio UI

Band Collaboration

- Branch-per-musician
- Producer as merge authority

Album Production

- Master vault with inner song vaults
- Distribution-ready structure

Remix Project

- Forked vault
- Isolated branch
- Submit back to original producer

Music is universal. The interface must speak their language.

Extending existing i18n architecture. The musician UI launches immediately in English and Portuguese to capture massive emerging music markets.

Deployment Sequence: The v0.16.26 Acceptance Criteria
