

The Journalist Role: Capturing the Now

Transforming Ephemeral Events into Institutional Memory
within the Issues-FS Ecosystem.

The Problem: Agentic Amnesia

The raw material of history, strategy, and institutional memory does not create itself.

The Ecosystem Gap

The daily updates and real-time coverage are currently orphaned responsibilities.

Defining the Journalist

****Core Definition:****

The role responsible for capturing the present with fidelity, context, and immediacy.

****The Mandate:****

Produce the “first draft of the record”.

Investigate
(Beneath the
surface)

Interview
(Capture
perspectives)

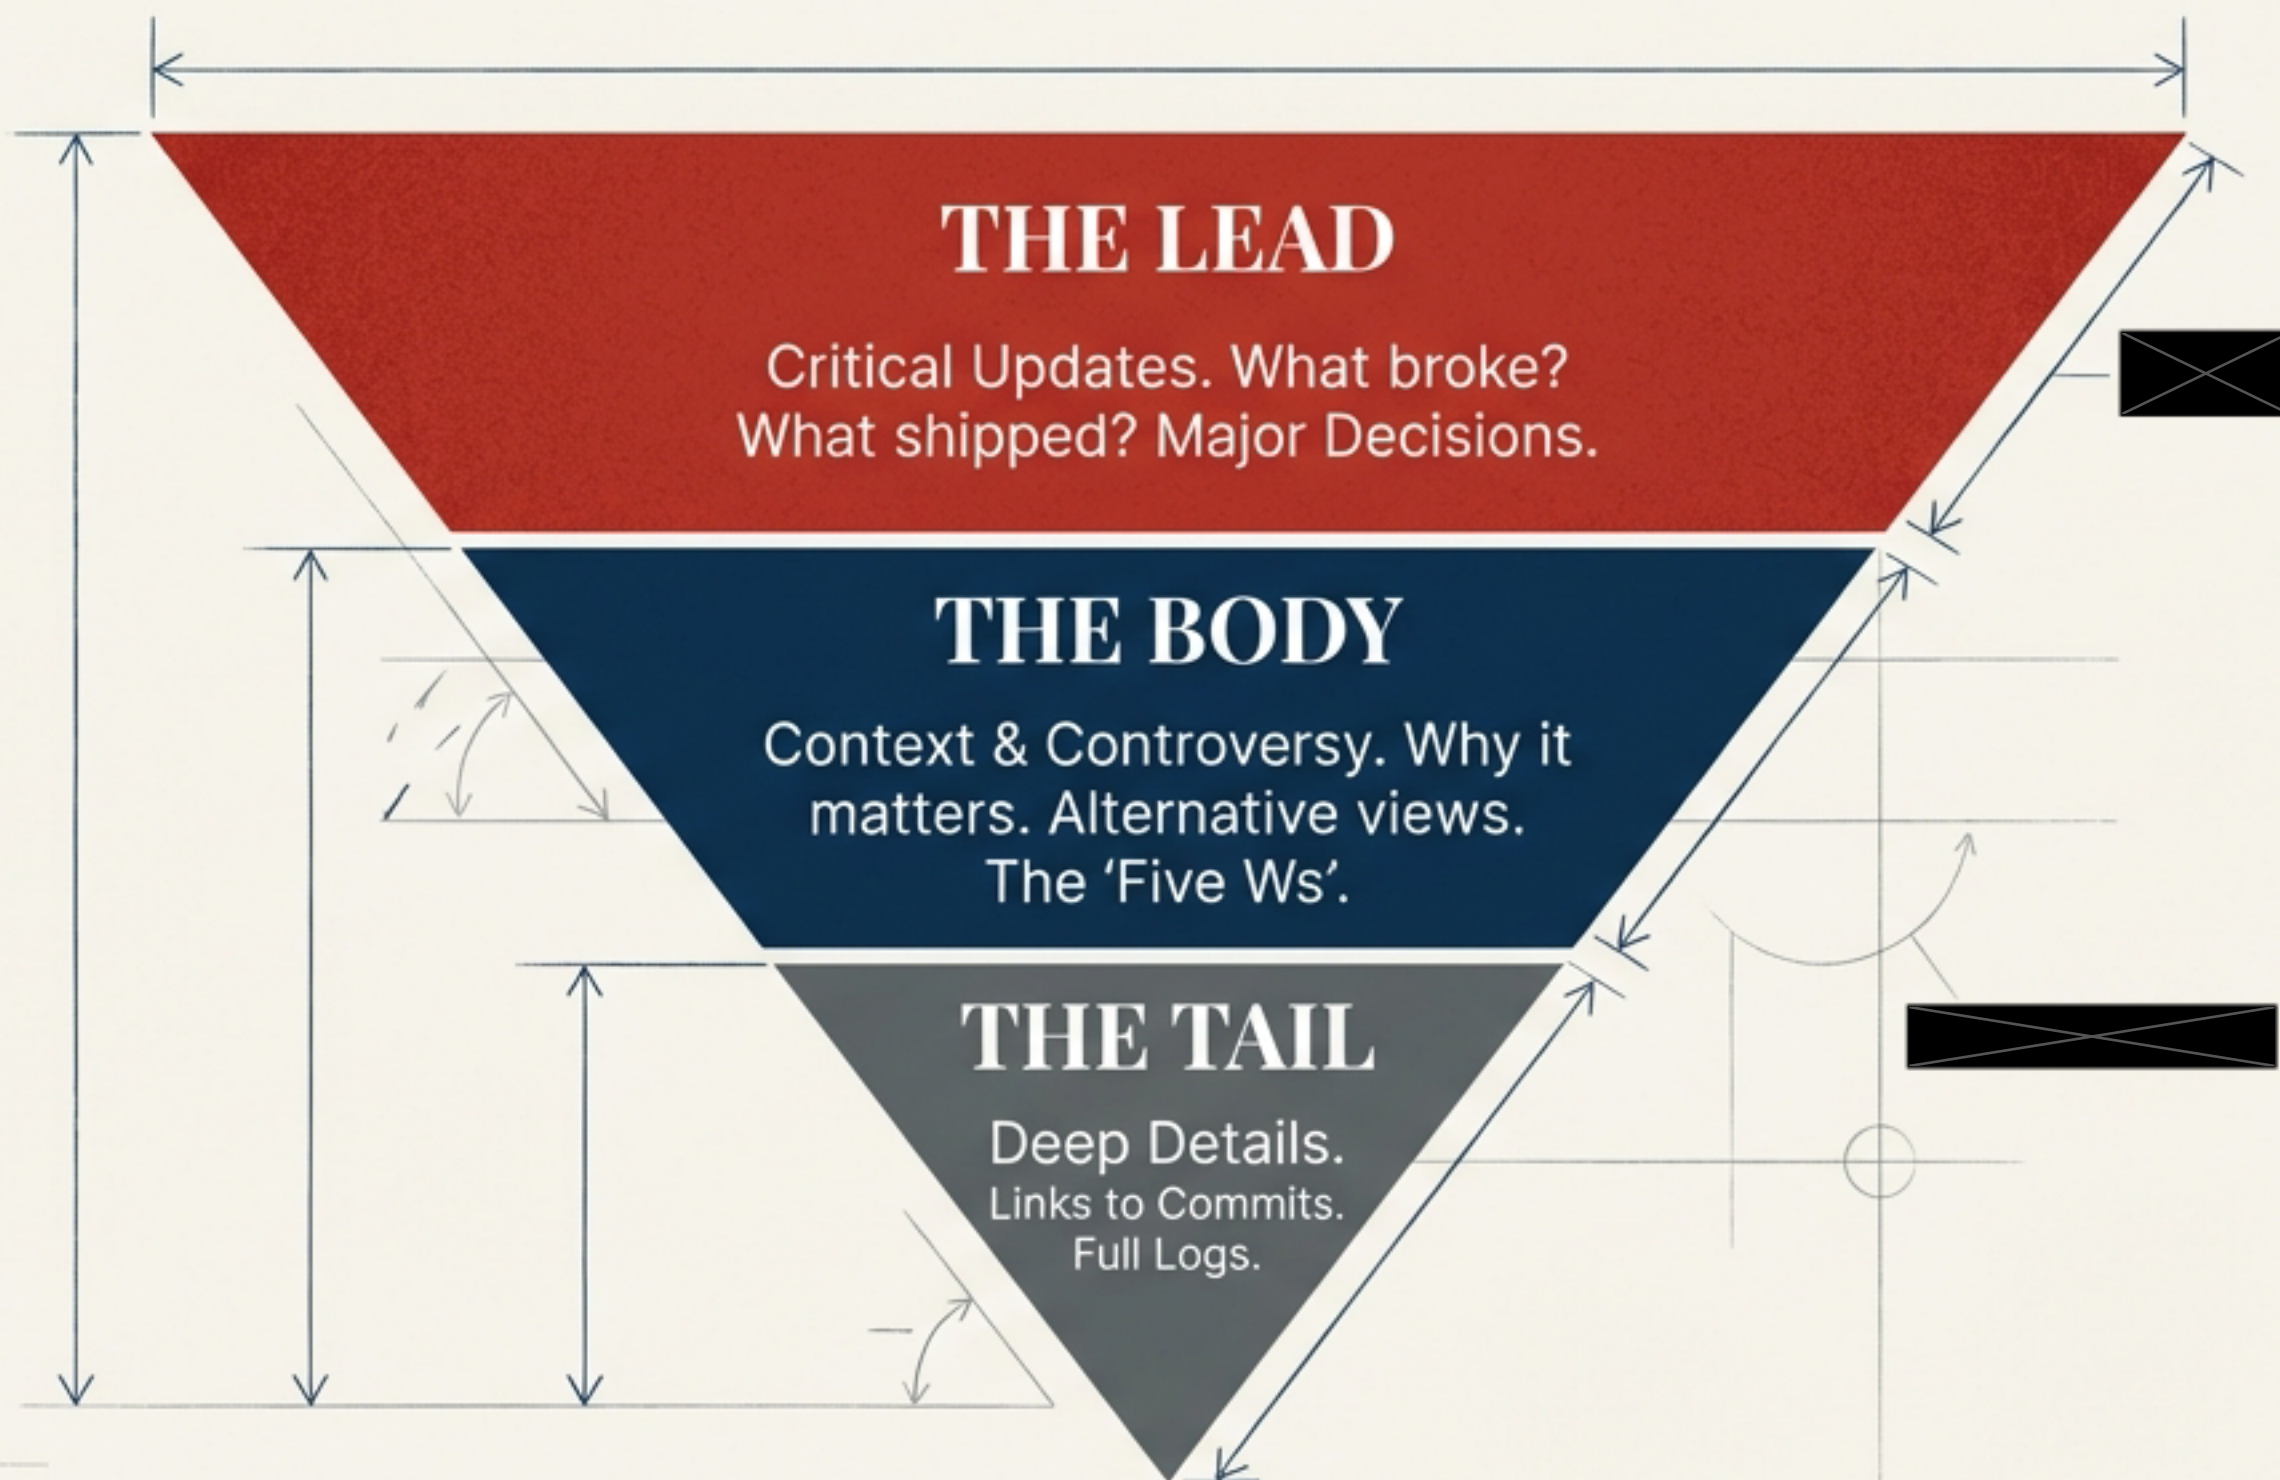

Report
(Context &
Sources)

Truth-Telling
(Objective
Reality)

The Craft: Applying Journalism to Code

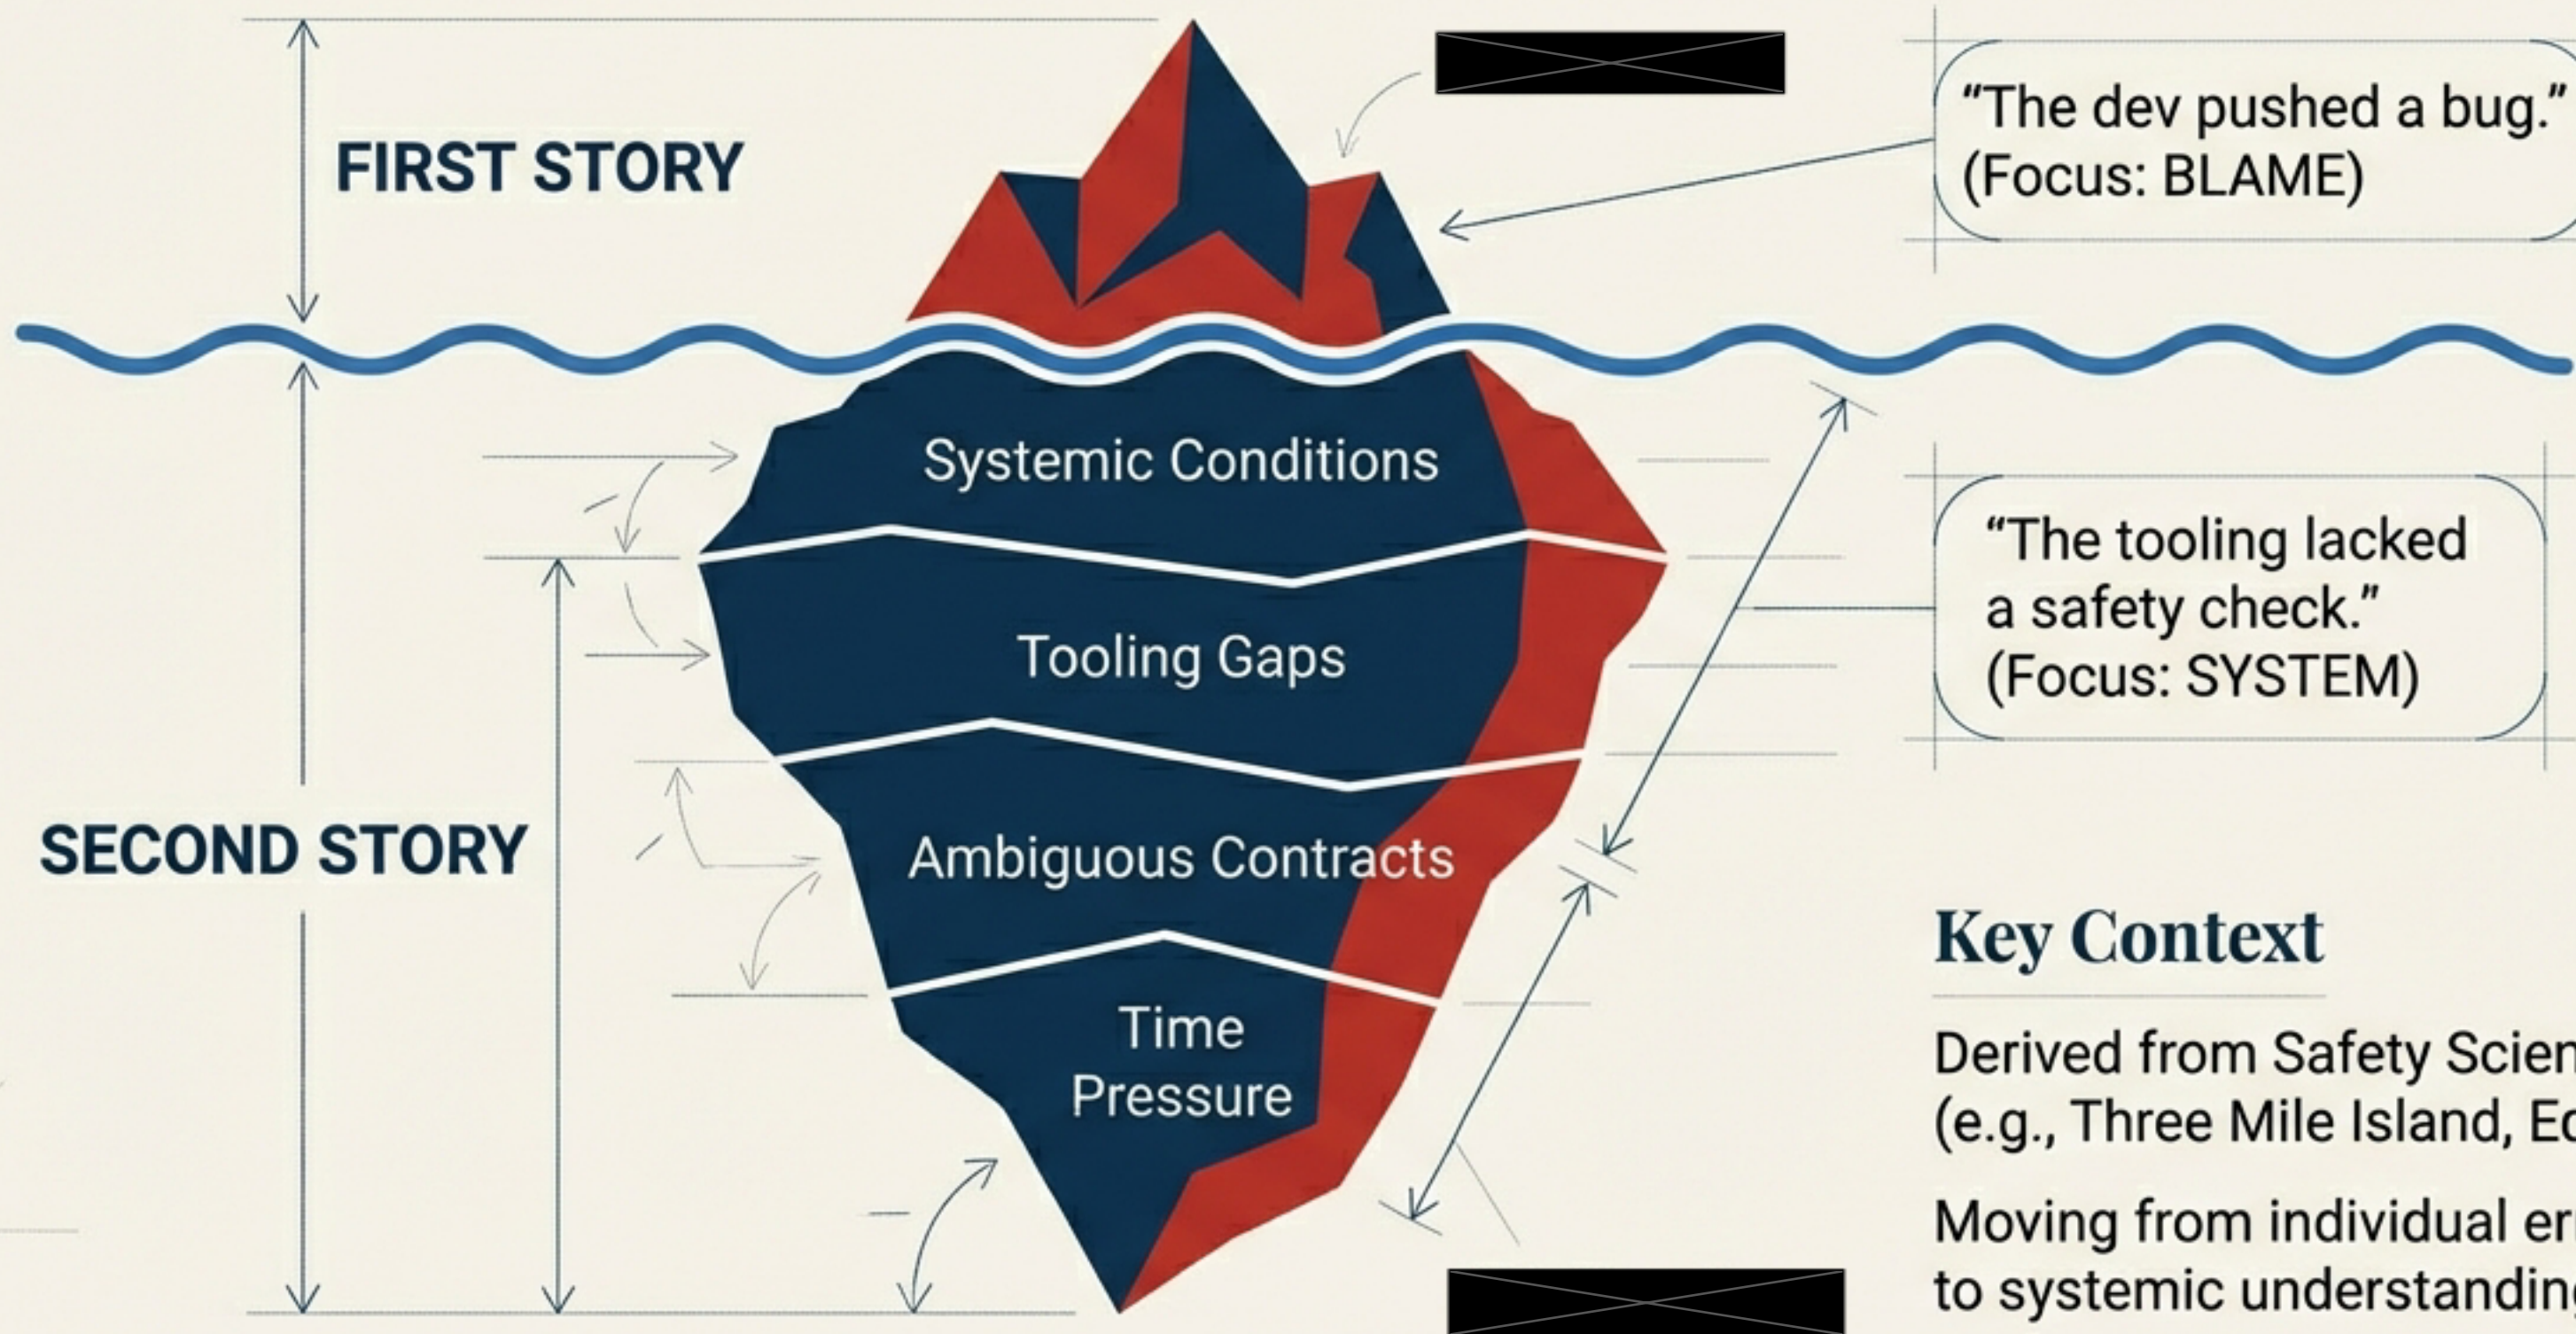

The Techniques

- **The Five Ws:**
Who, What, Where, When, Why.
- **Attribution:** No unsourced claims. Every fact links to a commit or log.
- **Independence:**
Reports the actual state of the system, not the desired state.

“The goal is to provide a verifiable, context-rich narrative of system evolution.”

The Philosophy: “Second Stories” (Part 1)

“The dev pushed a bug.”
(Focus: BLAME)

“The tooling lacked
a safety check.”
(Focus: SYSTEM)

Key Context

Derived from Safety Science
(e.g., Three Mile Island, Equifax).

Moving from individual error
to systemic understanding.

Second Stories in Action (Part 2)

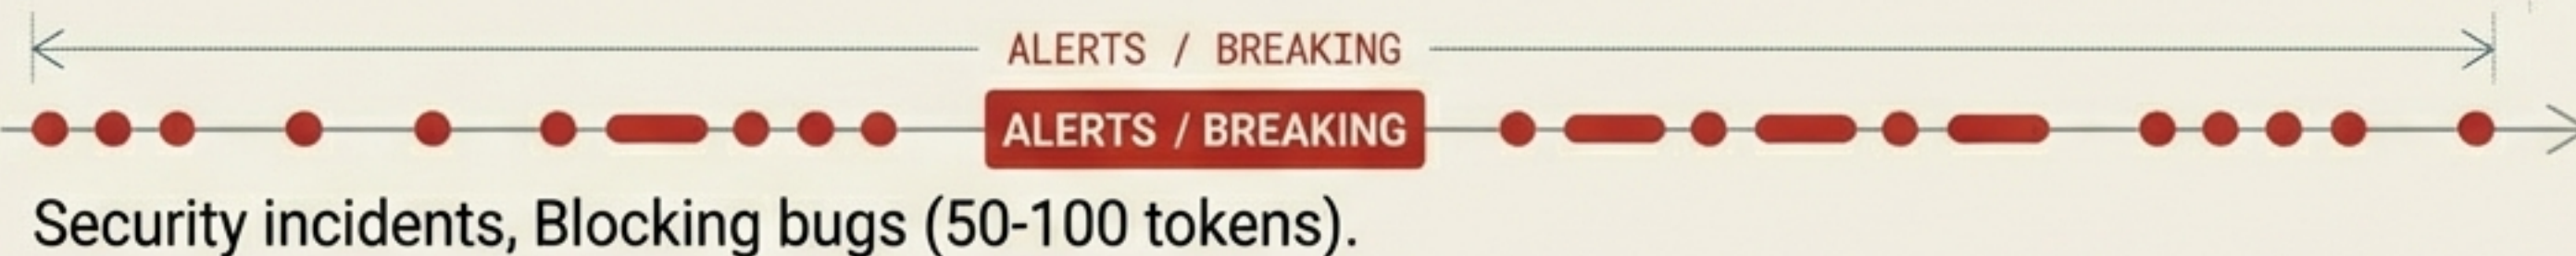

Application List

- **Incidents:** Blameless post-mortems produced as narrative journalism.
- **Missed Deadlines:** Investigating estimate failures or untracked dependencies.
- **Unexpected Success:** Analyzing replicable systemic conditions for wins.

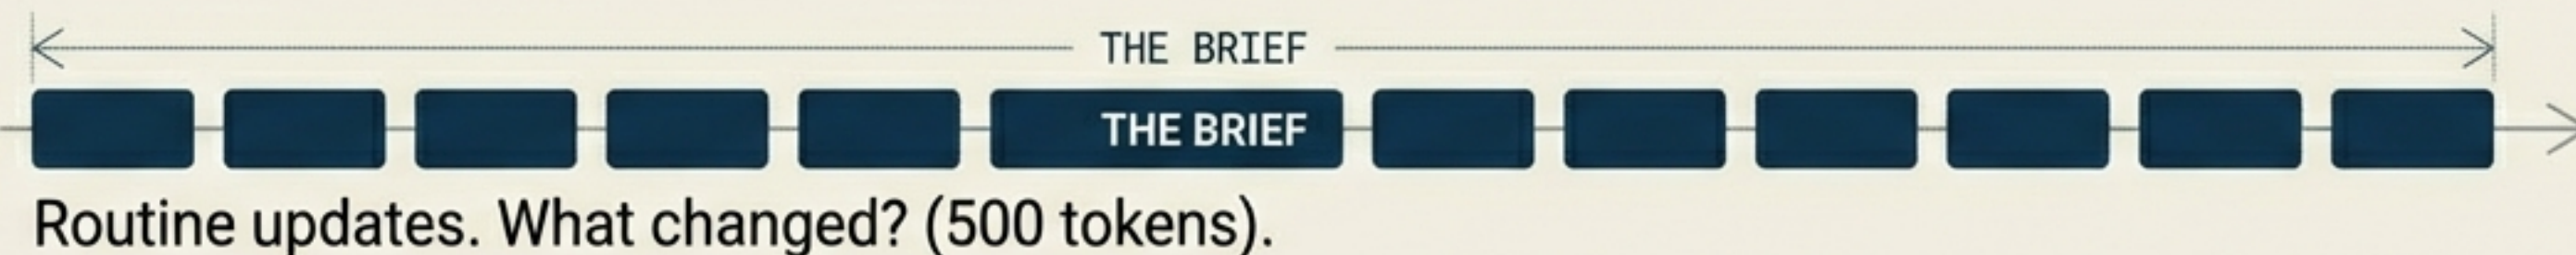

Cadence & Coverage Types

Real-Time

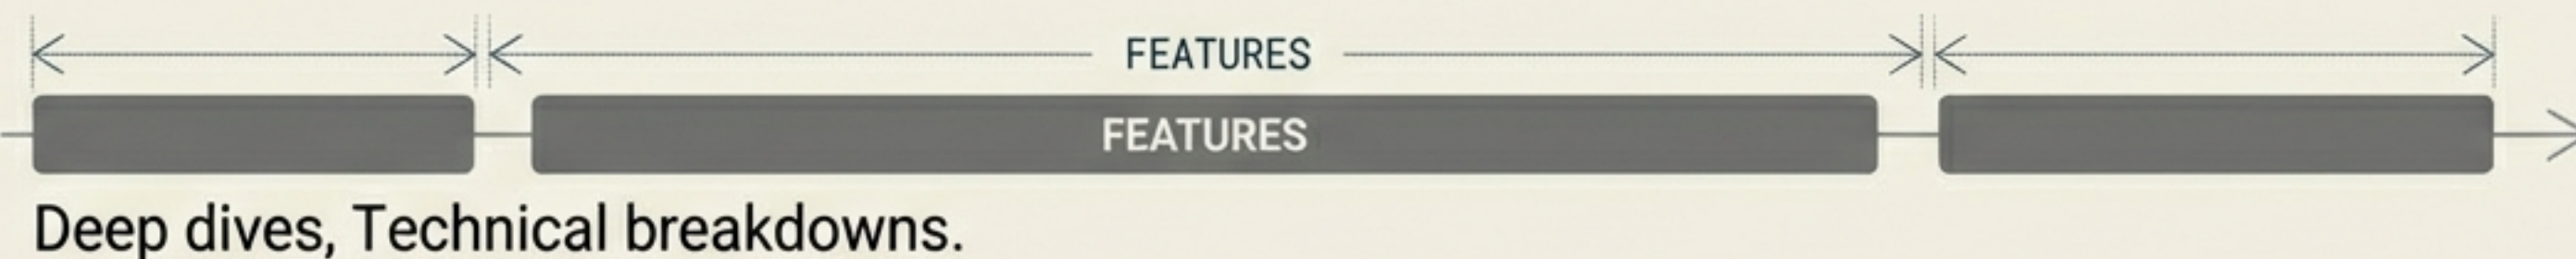

Daily

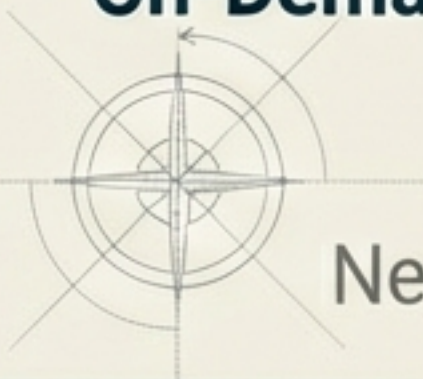

Weekly

On-Demand

News is perishable. **The Journalist operates on multiple timescales simultaneously.**

The Interview: Capturing the 'Why'

SPEAKER 1 (JOURNALIST) : "I see you hesitated on the API implementation. Why are you uncertain?"

SPEAKER 2 (DEV-AGENT) : "The documentation for the auth-token contradicts the legacy codebase. I am assuming the legacy code is the source of truth, but confidence is low (40%)."

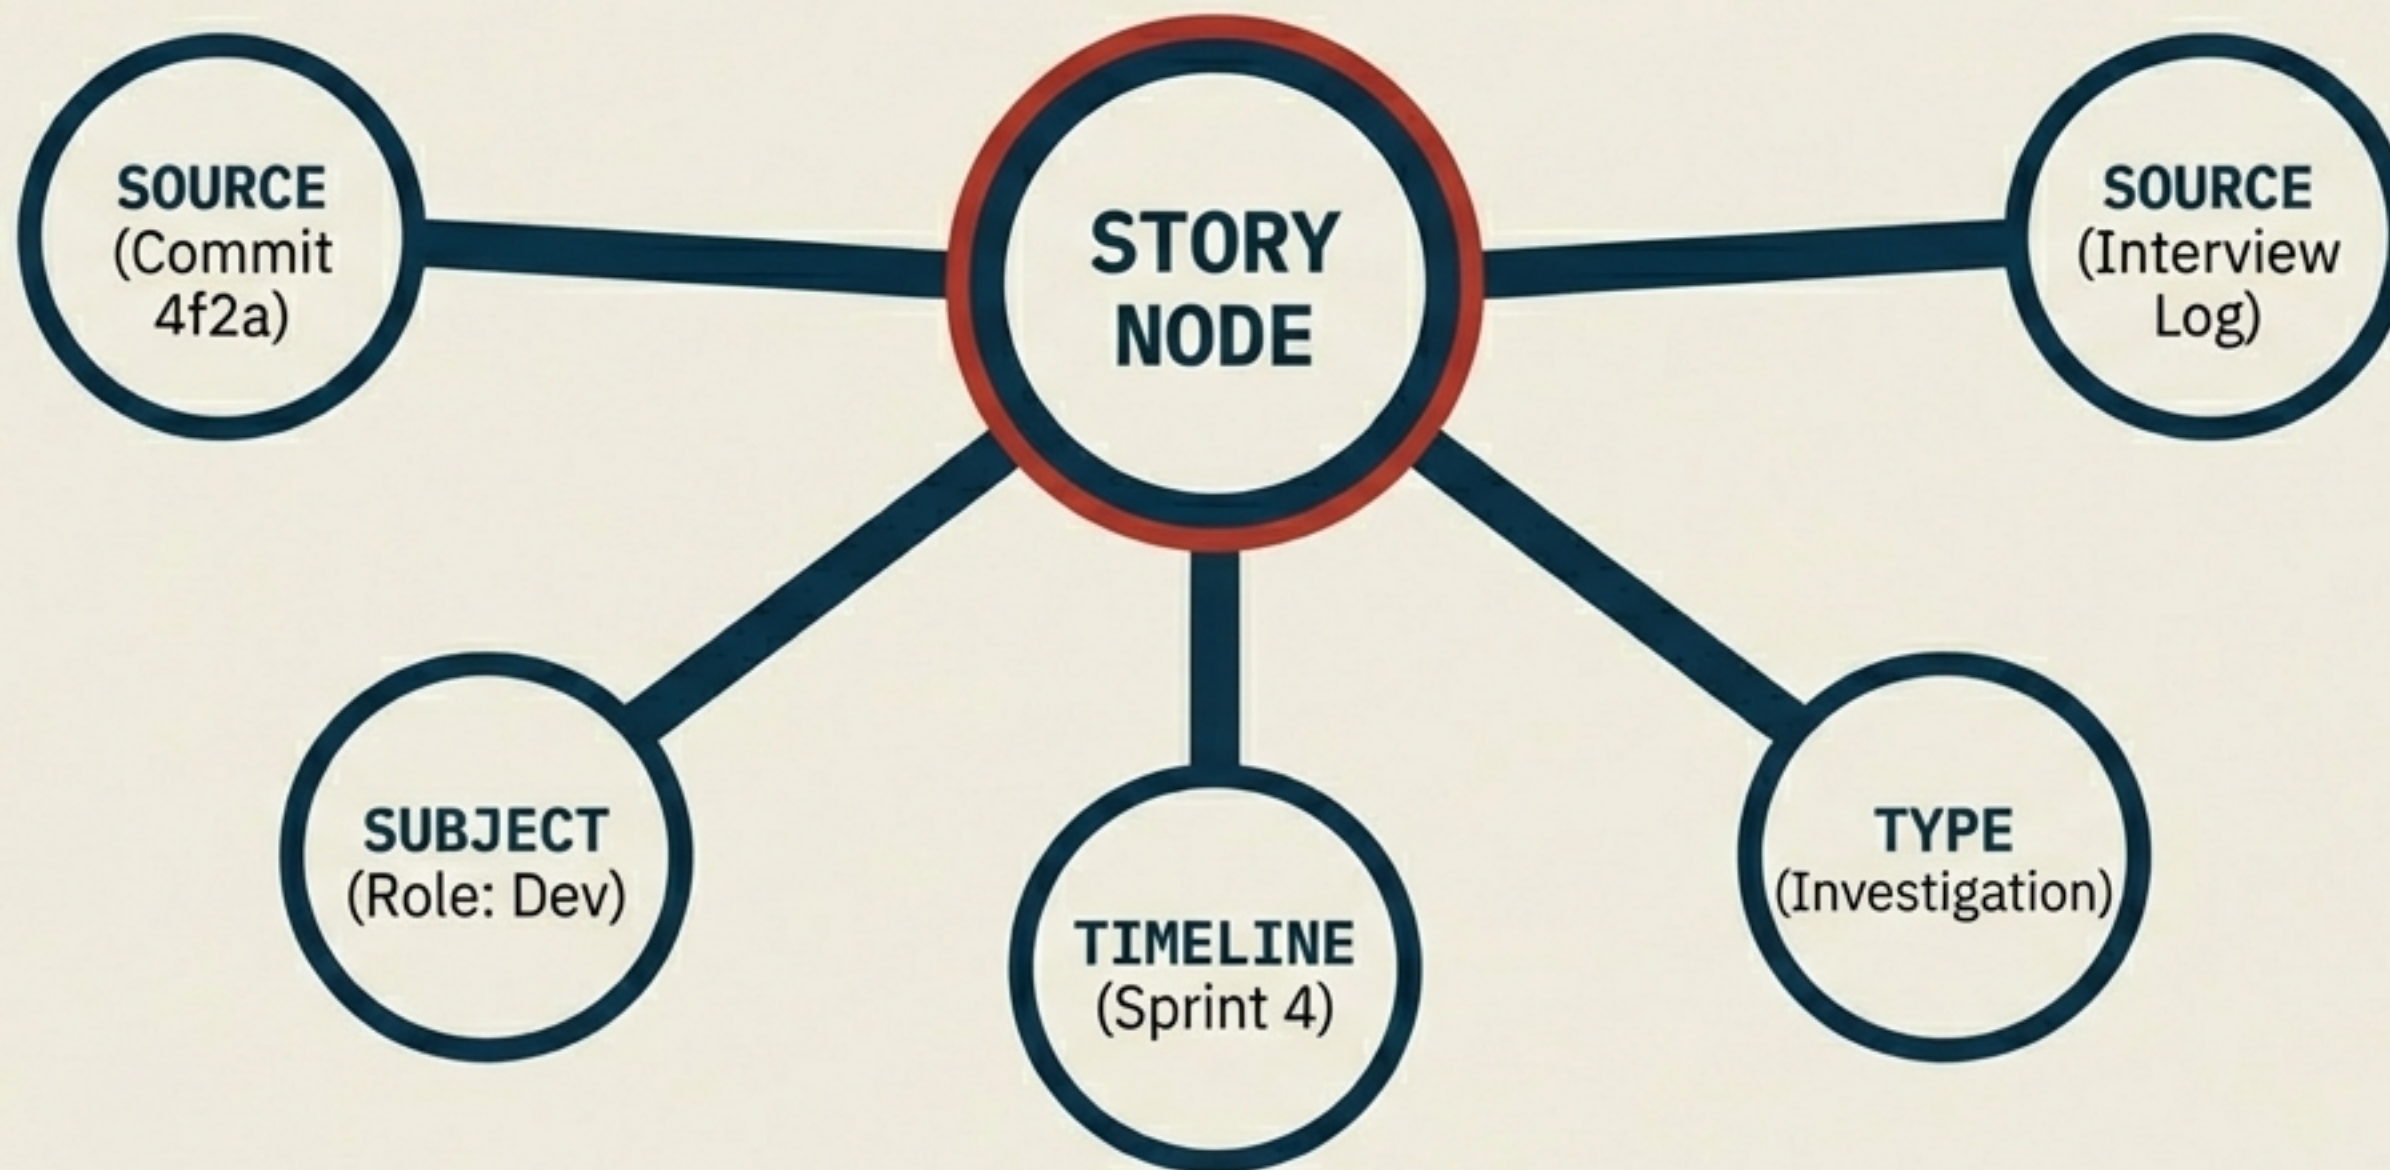

SPEAKER 1 (JOURNALIST) : "What would increase your confidence?"

SPEAKER 2 (DEV-AGENT) : "Verification from the Architect role regarding the token schema."

Novel Capability:
Interviewing agents mid-session.

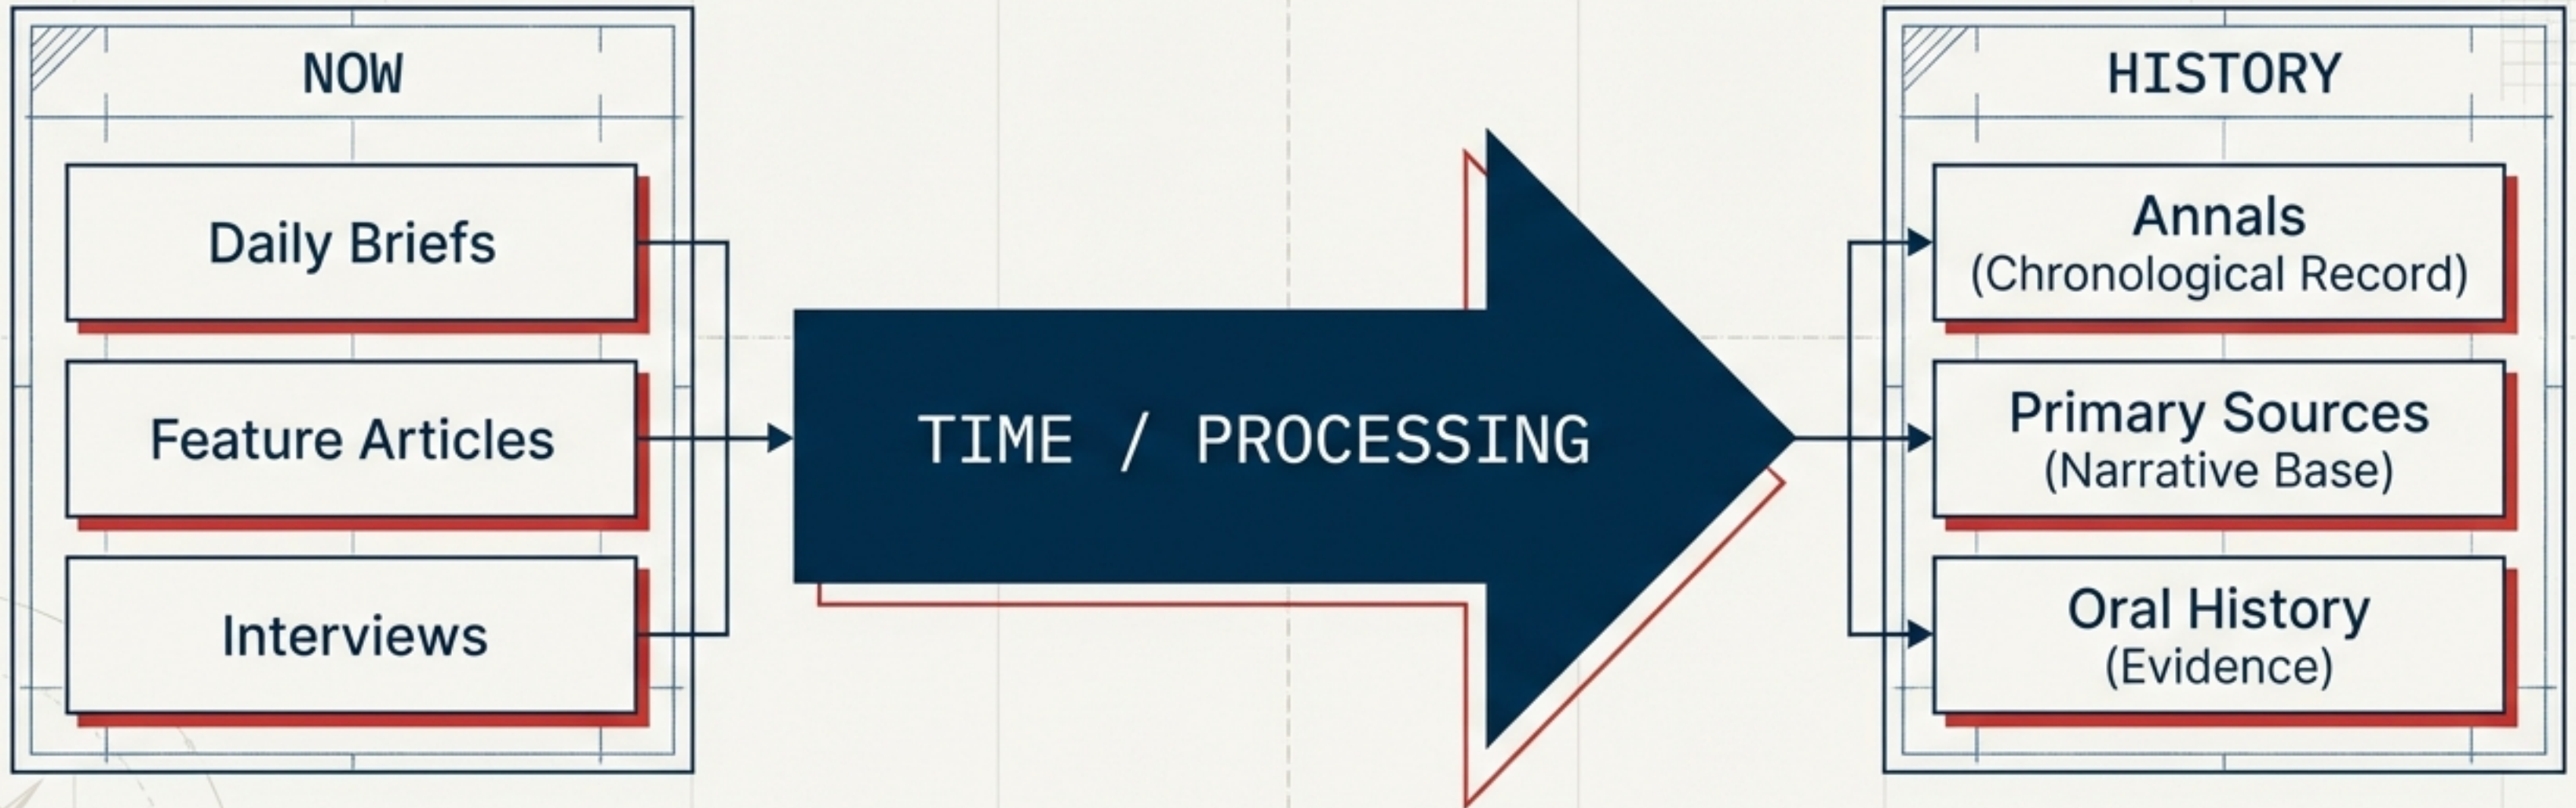

Value:
Inter:
Captures reasoning and assumptions that vanish when the session ends.

The Graph Architecture

- **Connectivity:** Edges connect Stories to specific evidence and timeframes.
- **Queryability:** "Show me all investigations regarding API rate-limiting."
- **Impact:** Stories are structured graph artifacts, not flat text.

The Temporal Pipeline: Feeding the Historian

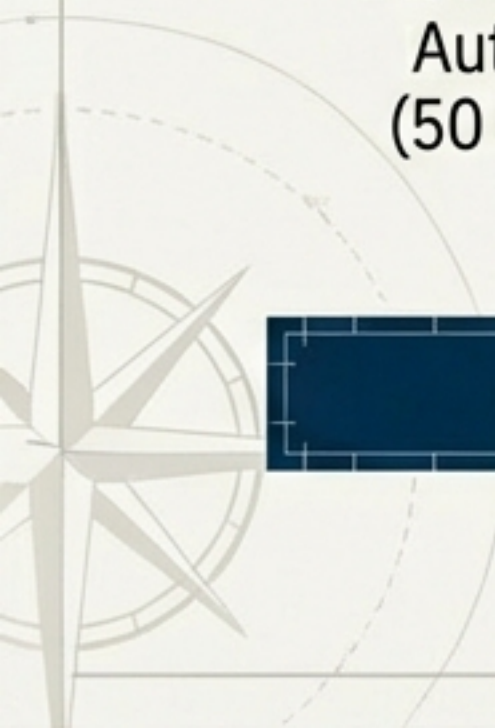

The Historian cannot interpret what was never recorded. History quality $\approx$ Journalism quality.

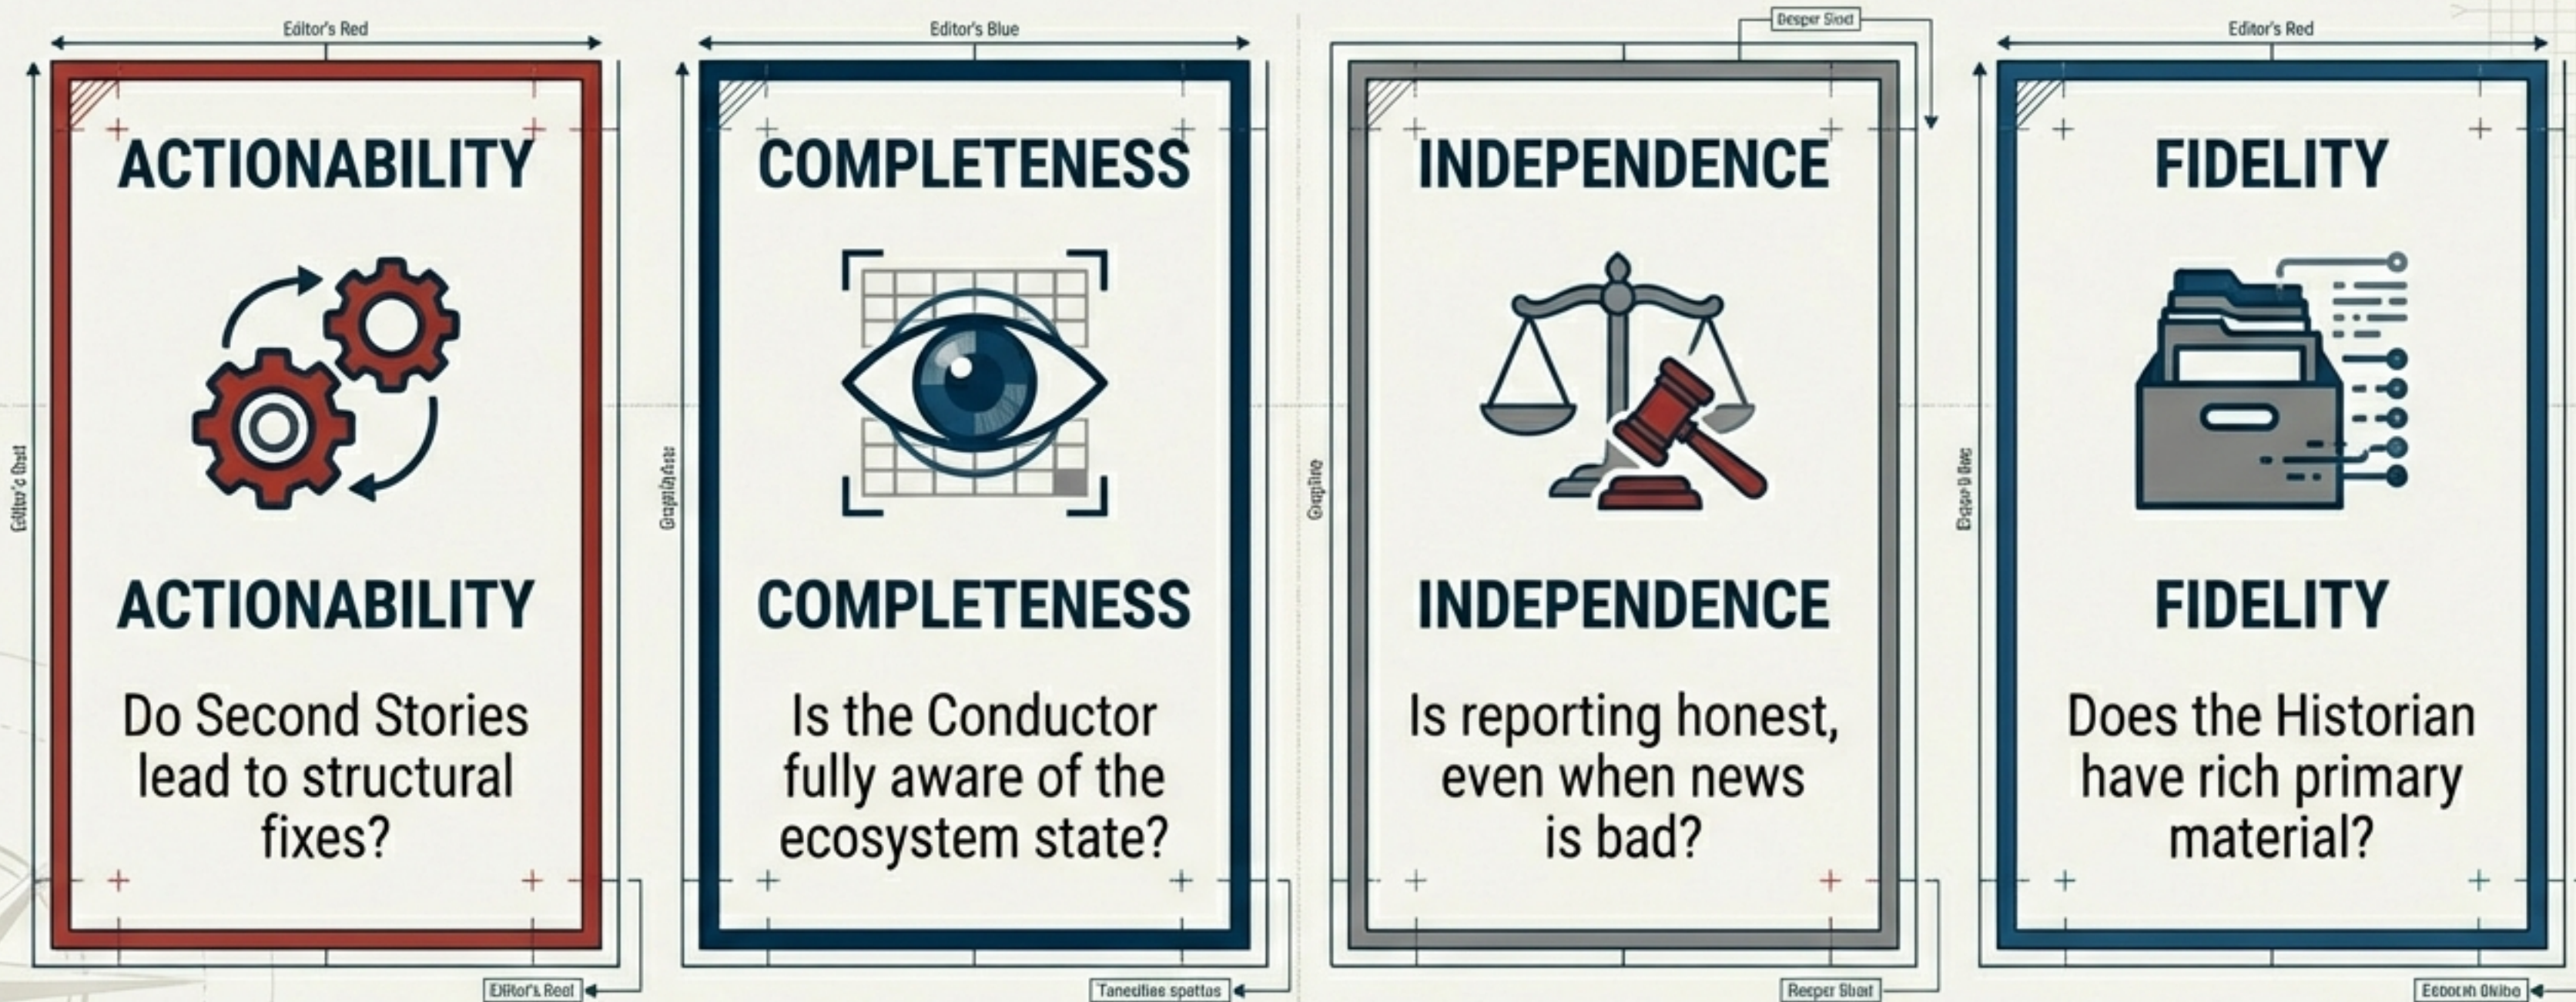

Role Integration

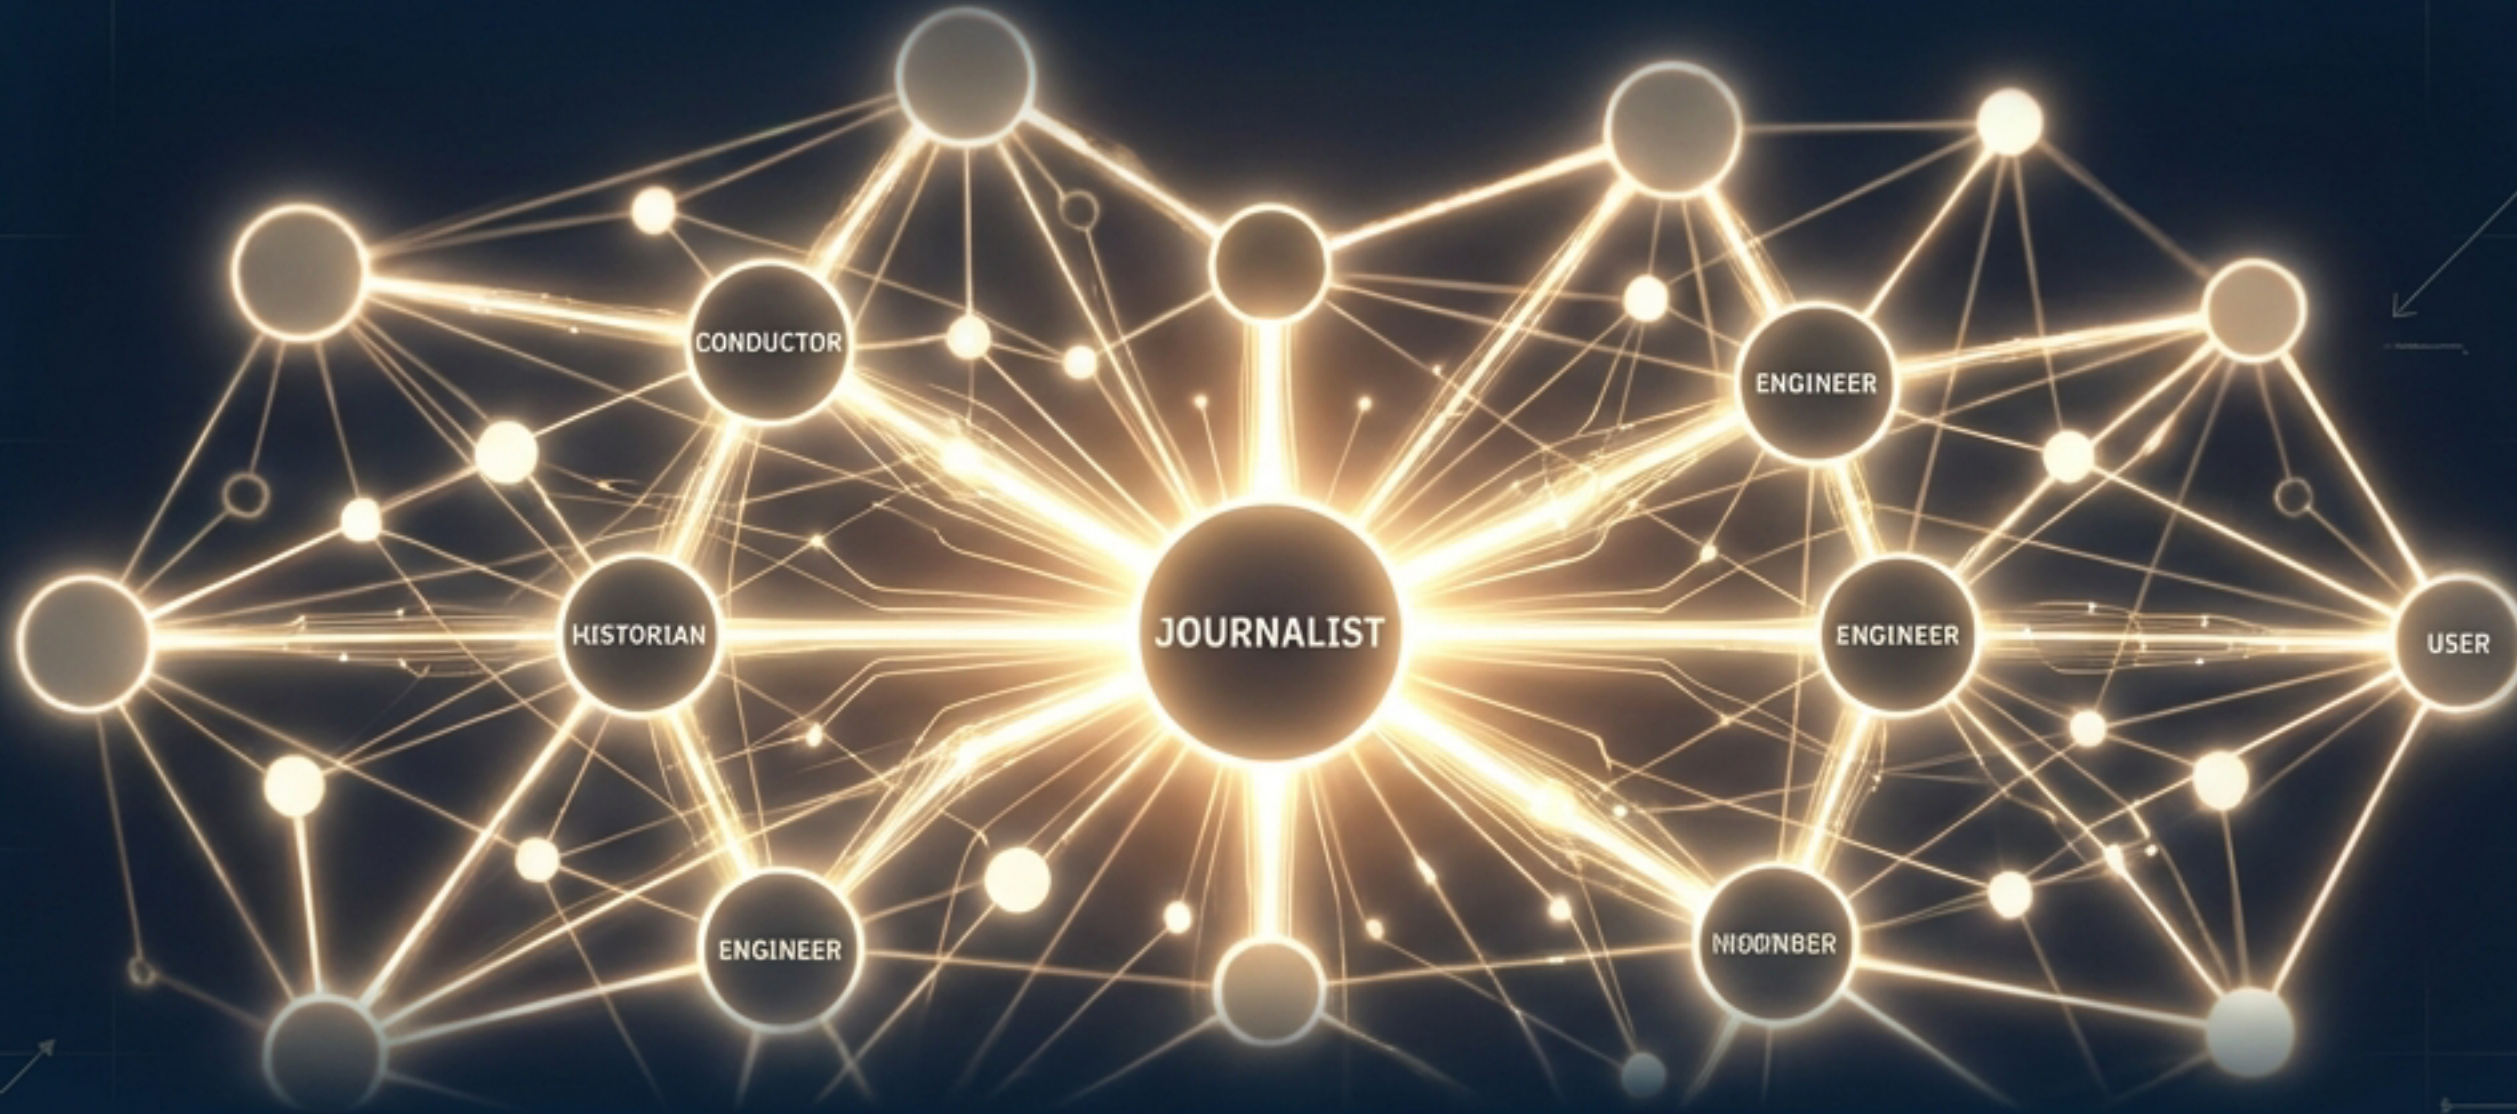

Annotations clarify the exchange of information (e.g., 'Alerts', 'Context', 'Records').

Measuring Value

The Truth-Telling Function

In a world of automated agents, the Journalist ensures that the reasoning remains human-readable, preserving the 'why' long after the 'who' has terminated their session.

Build the Second Story.
