

Graph-Based Deployment Specifications

The Architecture of the Football Pilates Scheduler

```
1 // Project: Football Pilates Scheduler
2 // Date: 2026-02-07
3 // Context: Self-contained, auditable,
  costable deployment units.
```

The Anatomy of a Deployment Pod

A directed acyclic graph (DAG) constituting a complete, deployable unit.

Permissions & Gates

Layer 01 // Access Control & Policy
JetBrains Mono

Logic & Compute

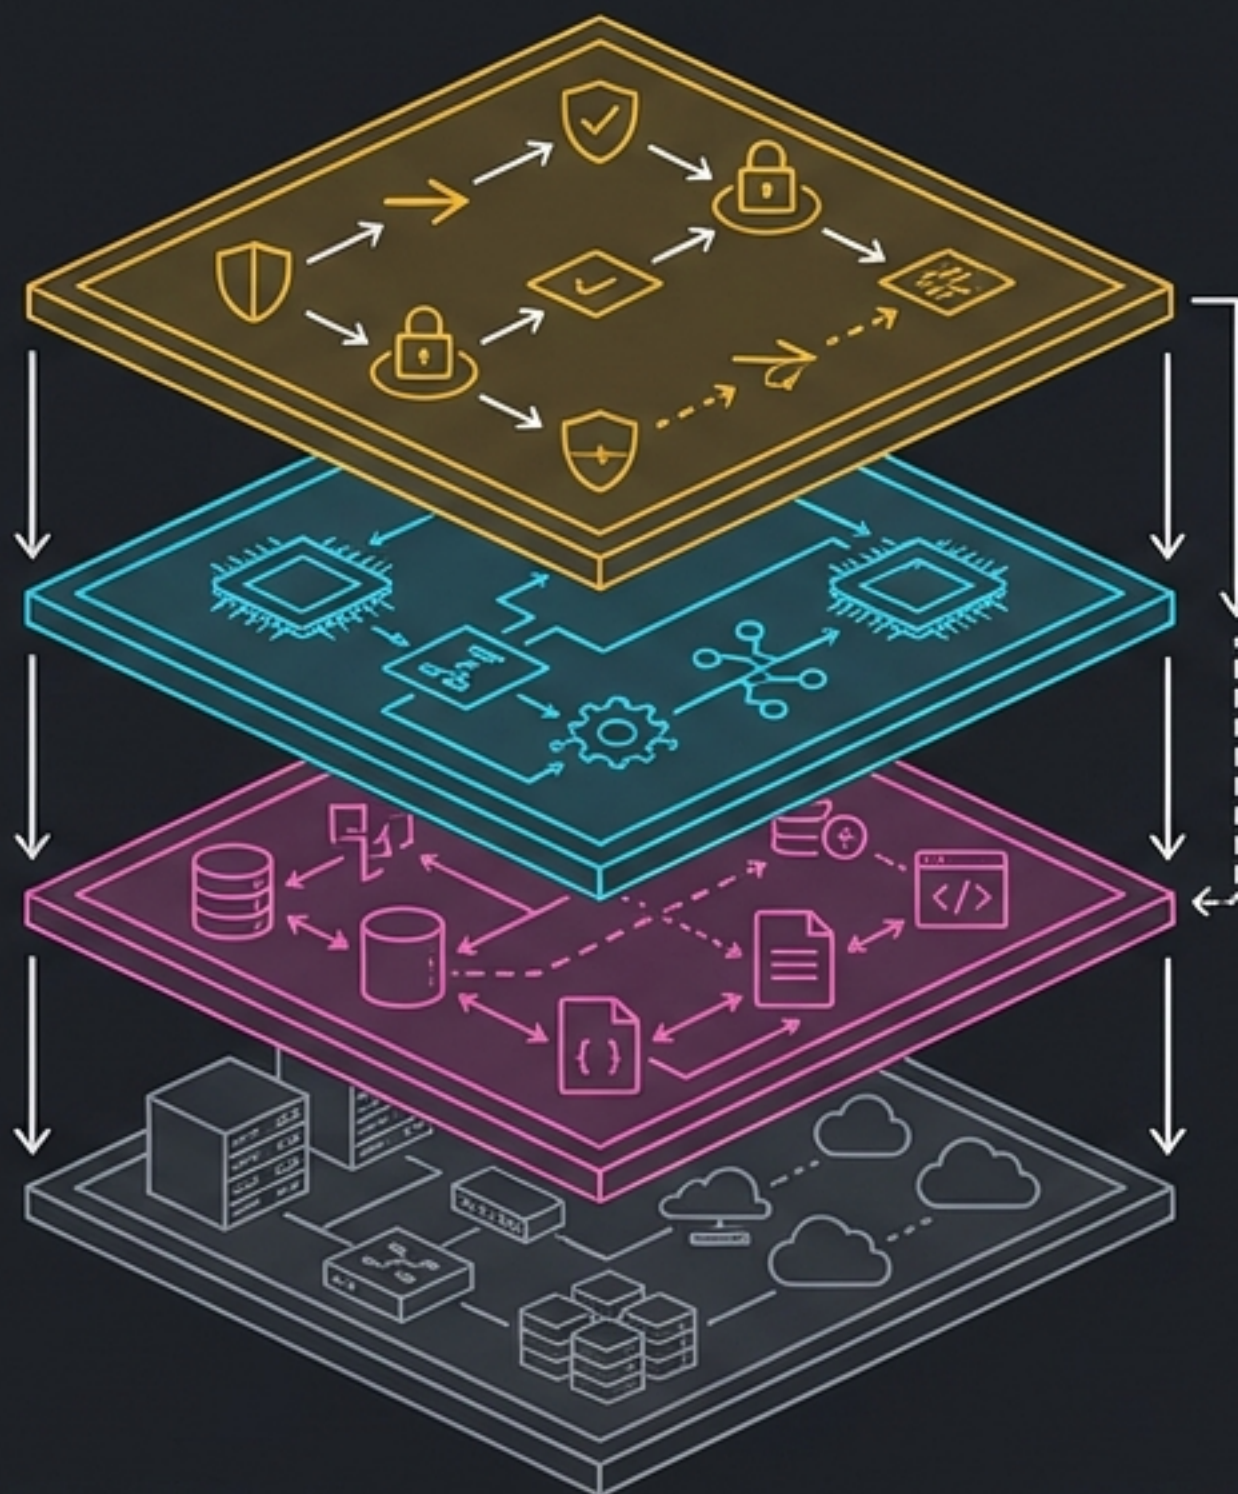

Layer 02 // Application & Data Processing
JetBrains Mono

State & Config

Layer 03 // Persistent Data & Environment Settings
JetBrains Mono

Infrastructure Base

Layer 04 // Foundation Resources & Networking
JetBrains Mono

THE 5 PILLARS OF DEPLOYMENT

Self-contained:

Zero to running in one graph

Costable:

Associated cost model per node

Auditable:

Maps to Issues FS

Idempotent:

Repeatable state application

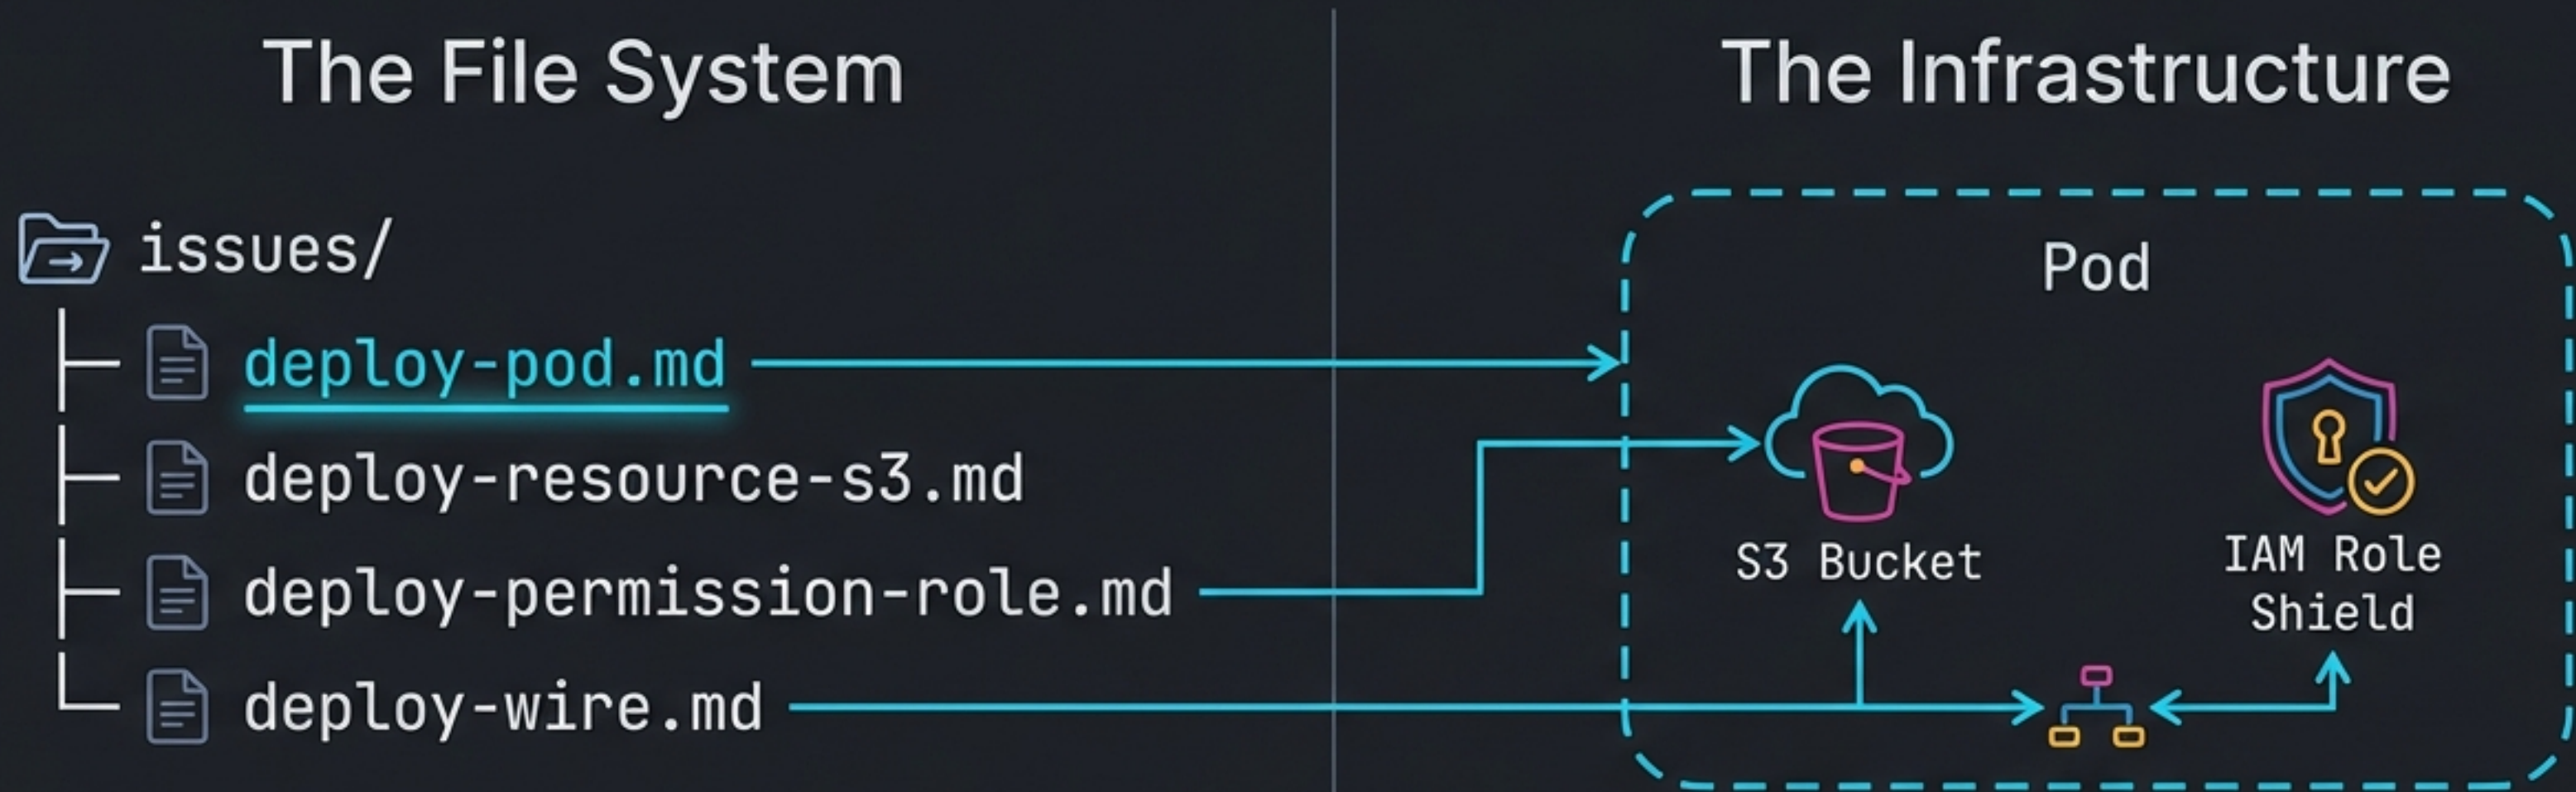

Scoped:

Blast radius = Cloud Account

States: Abstract (What)
vs. Concrete (How)
JetBrains Mono

The Control Plane: Issues FS Mapping

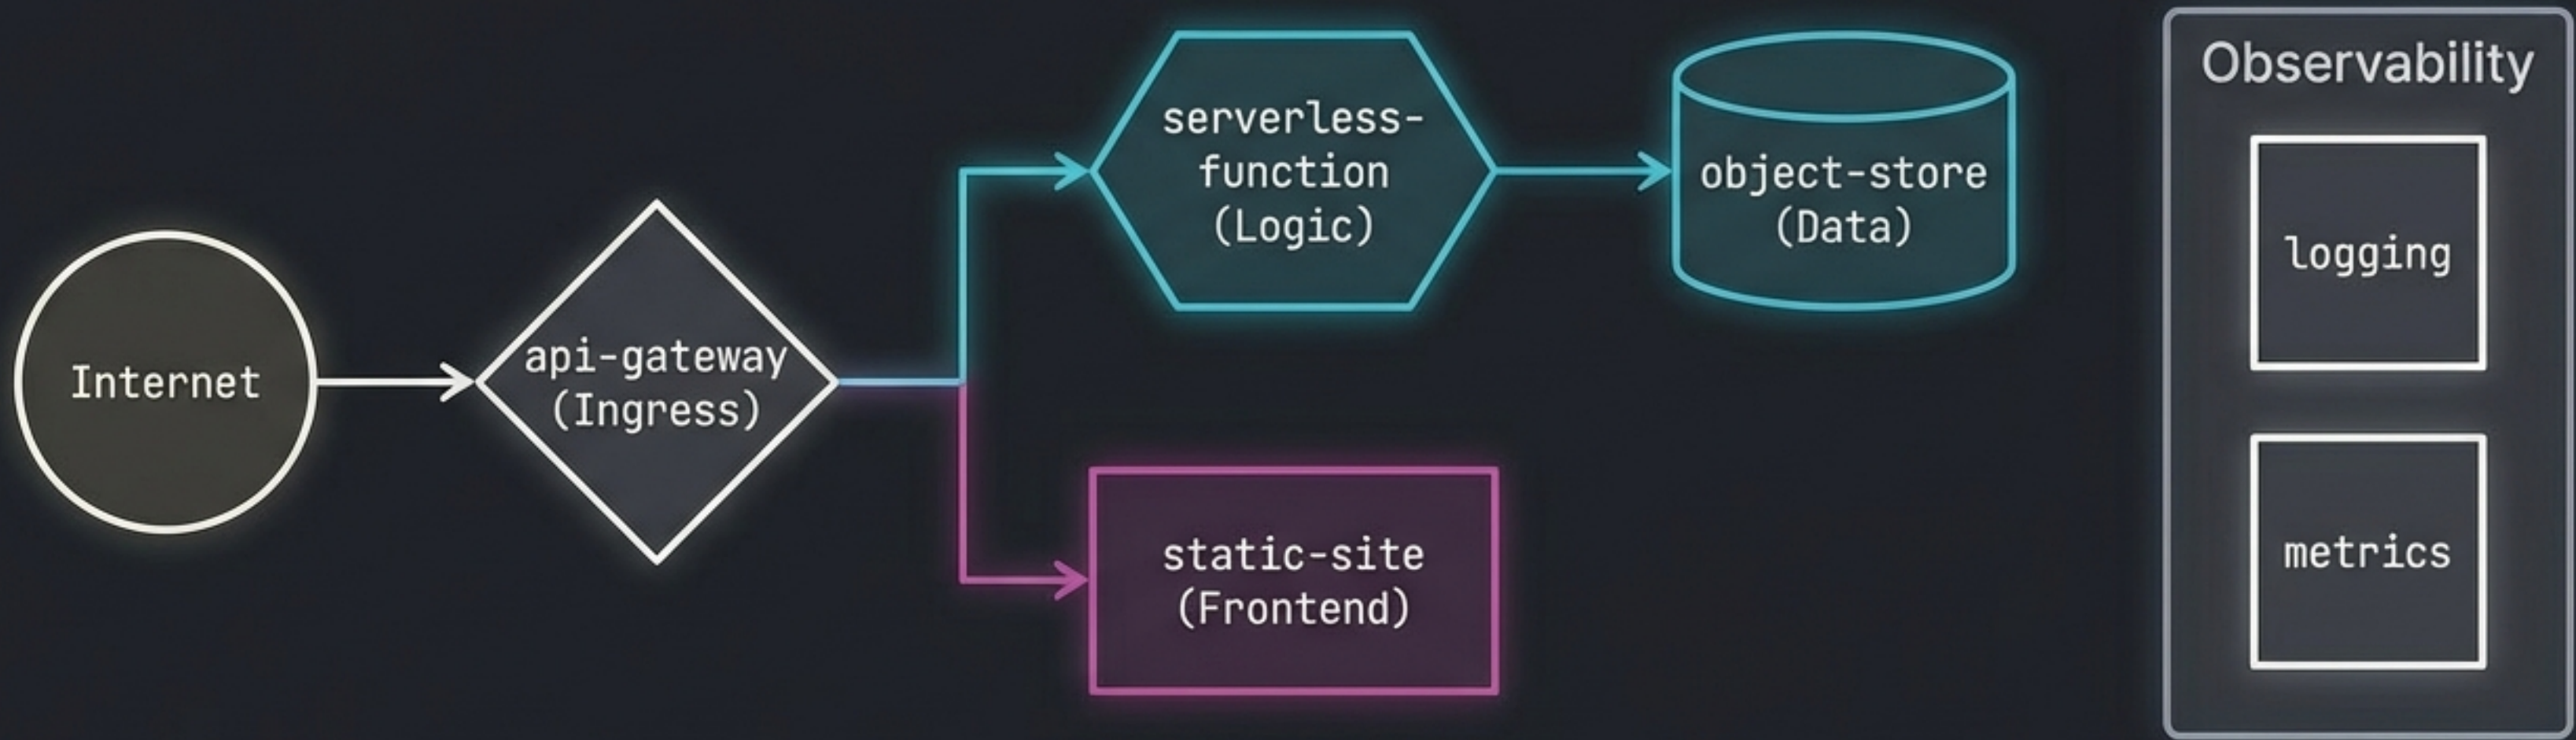

Vocabulary:

<code>Deploy:Pod</code> =	Container
<code>Deploy:Resource</code> =	Infrastructure
<code>Deploy:Permission</code> =	IAM
<code>Deploy:Wire</code> =	Connection
<code>Deploy:Gate</code> =	Verification

Graph 1: The Abstract Cloud-Agnostic Pod

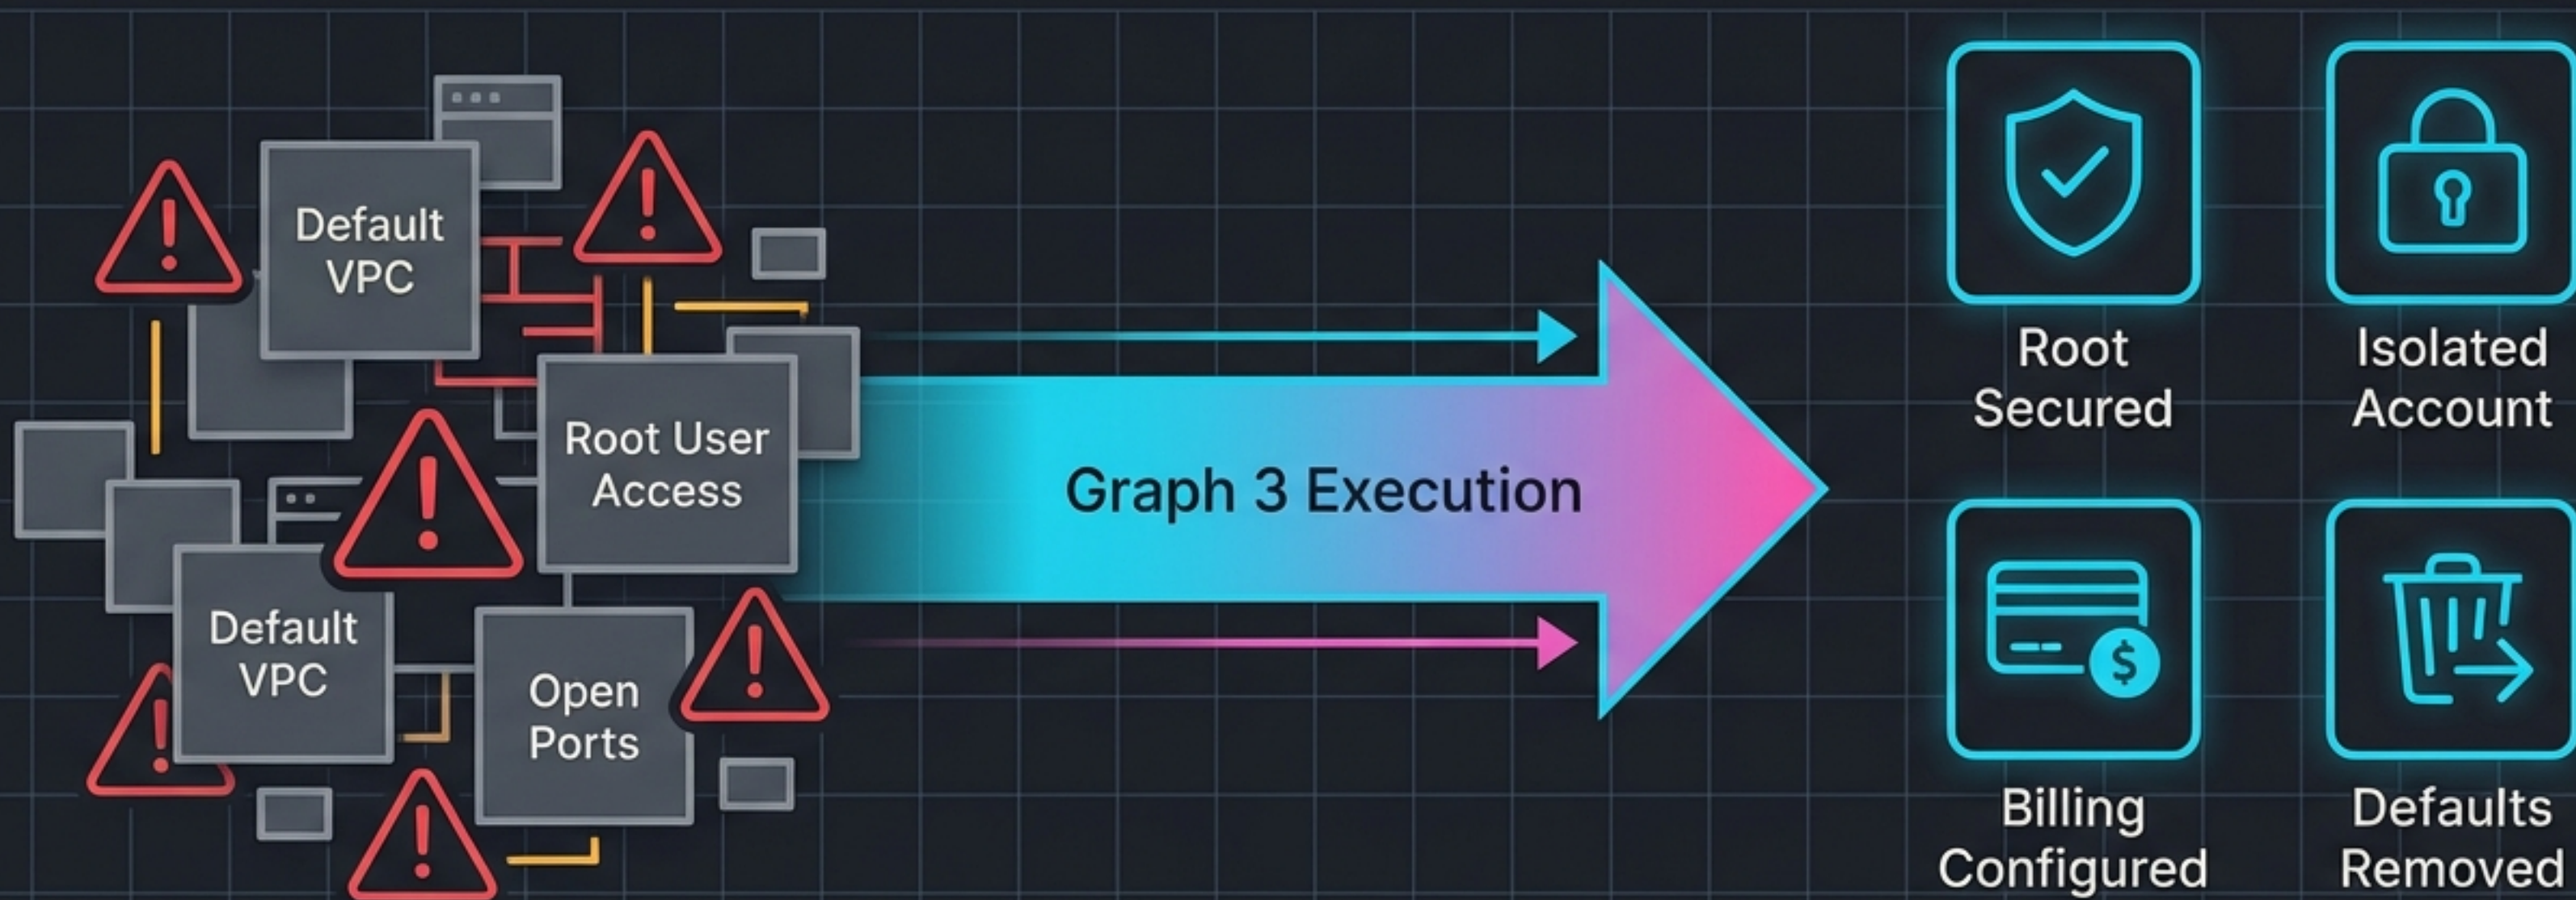

The Source of Truth (Defining 'What', not 'How')

Dependency chain and execution order. Vendor-neutral definition.

Graph 3: The Prerequisite Clean Slate

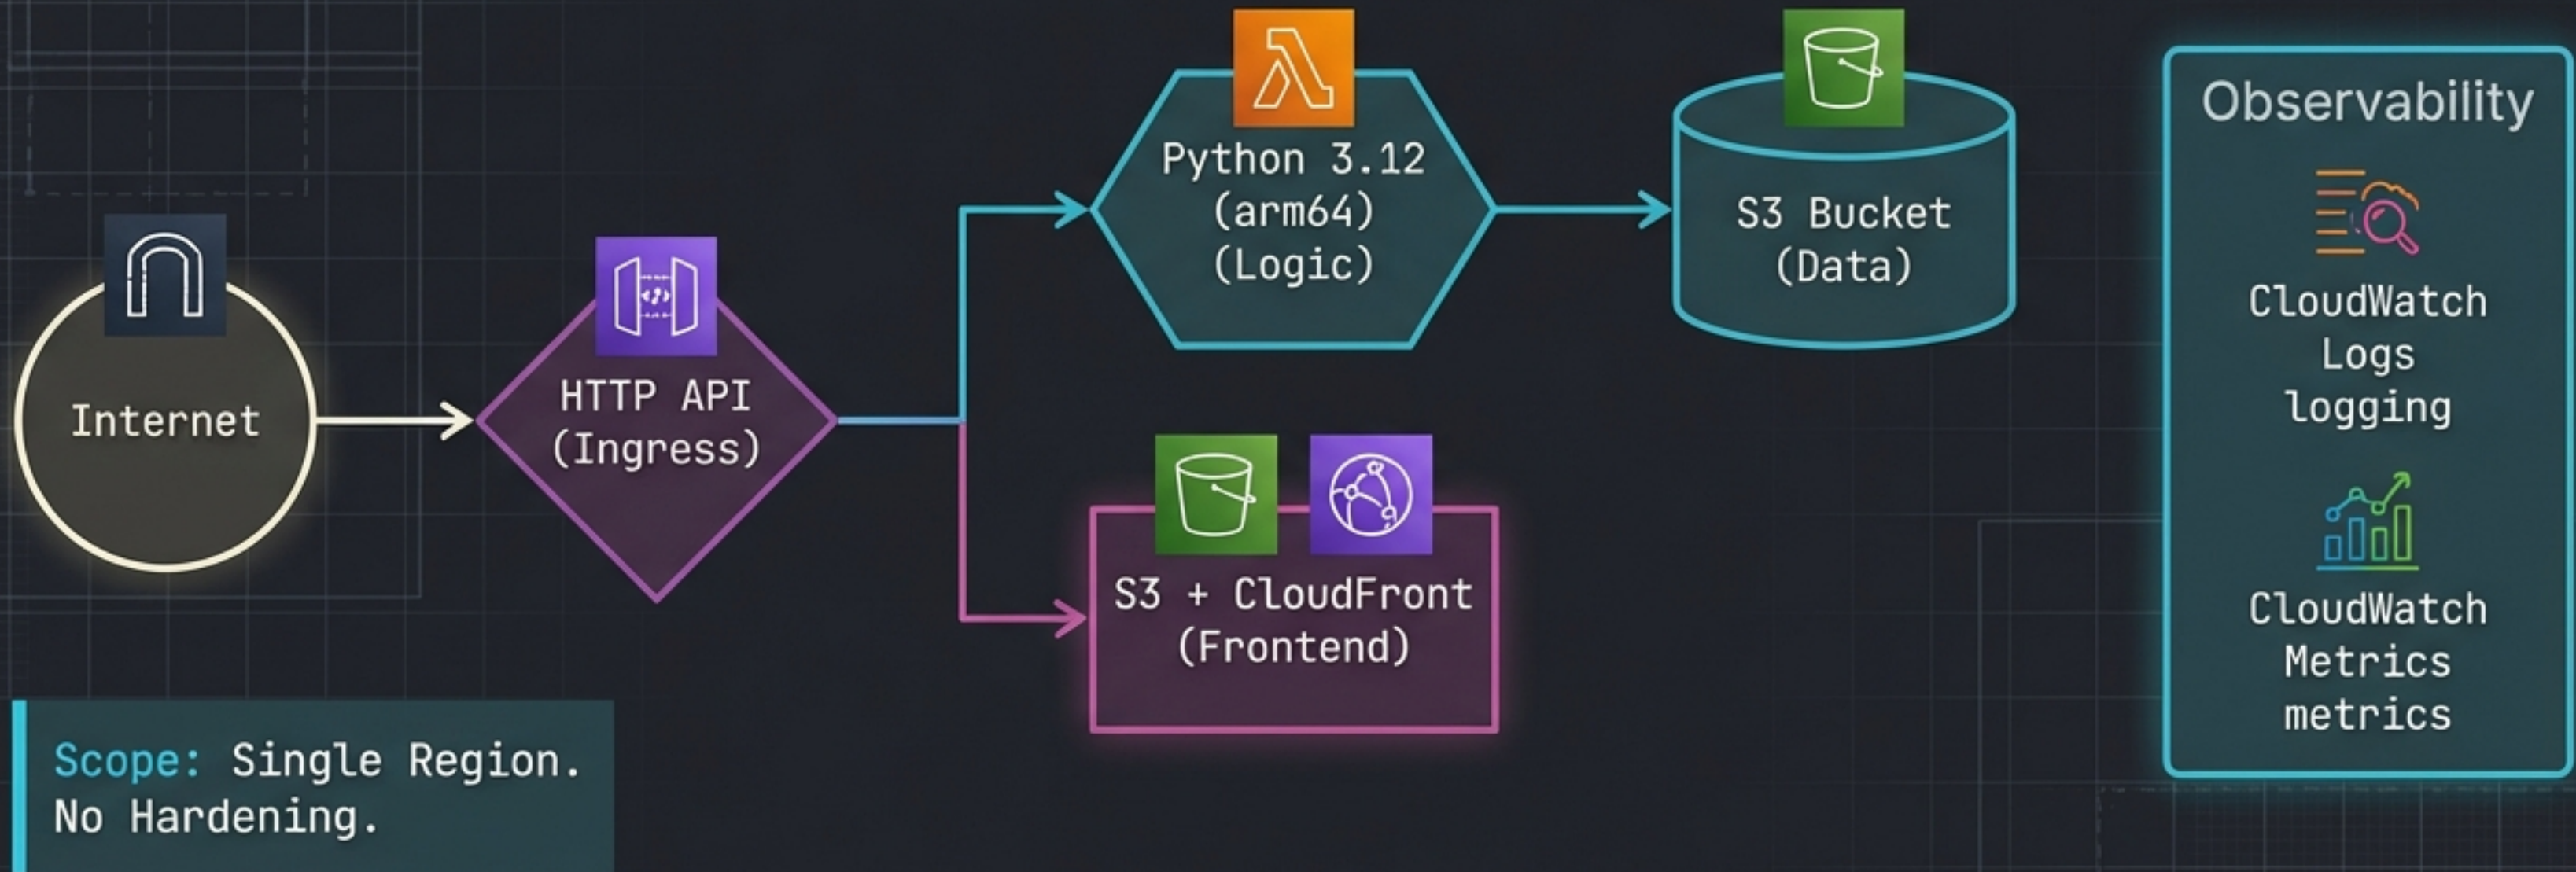

Establishing the Security Baseline

Mandatory execution before MVP deployment to contain blast radius.

Graph 2: The AWS MVP Deployment

Concrete Implementation on Existing Account

Dependency chain and execution order. Concrete AWS implementation.

MVP Economics: The Cost of Zero

Leveraging AWS Free Tier for Initial Growth

\$0.00

AWS Lambda	1M requests/mo free	\$0.00
API Gateway	Free Tier Eligible	\$0.00
Amazon S3	5GB Storage / 20k GETs	\$0.00
CloudWatch Logs	5GB Ingest	\$0.00

Total Estimate: \$0.00/mo for first 12 months. Post-tier estimate: ~\$2.40/mo.

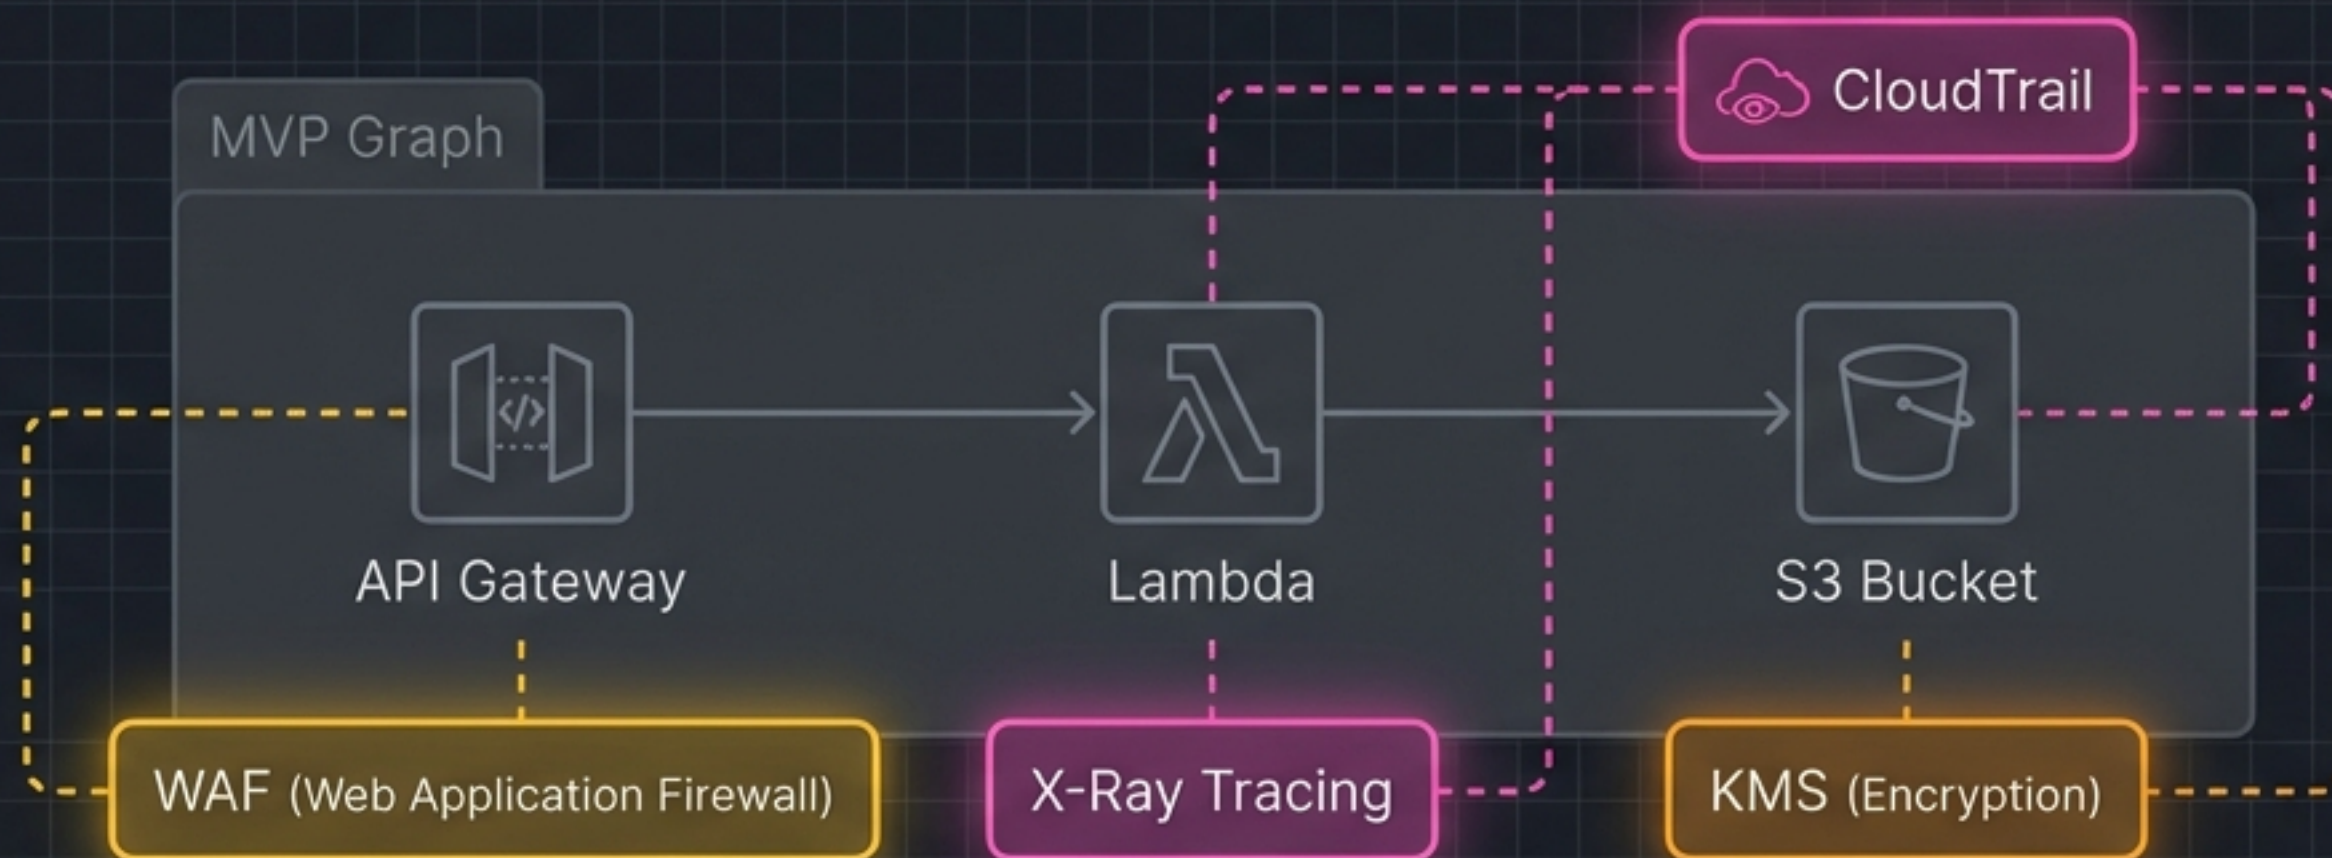

Graph 4: Enterprise Multi-Region Topology

Extending for Resilience and Scale

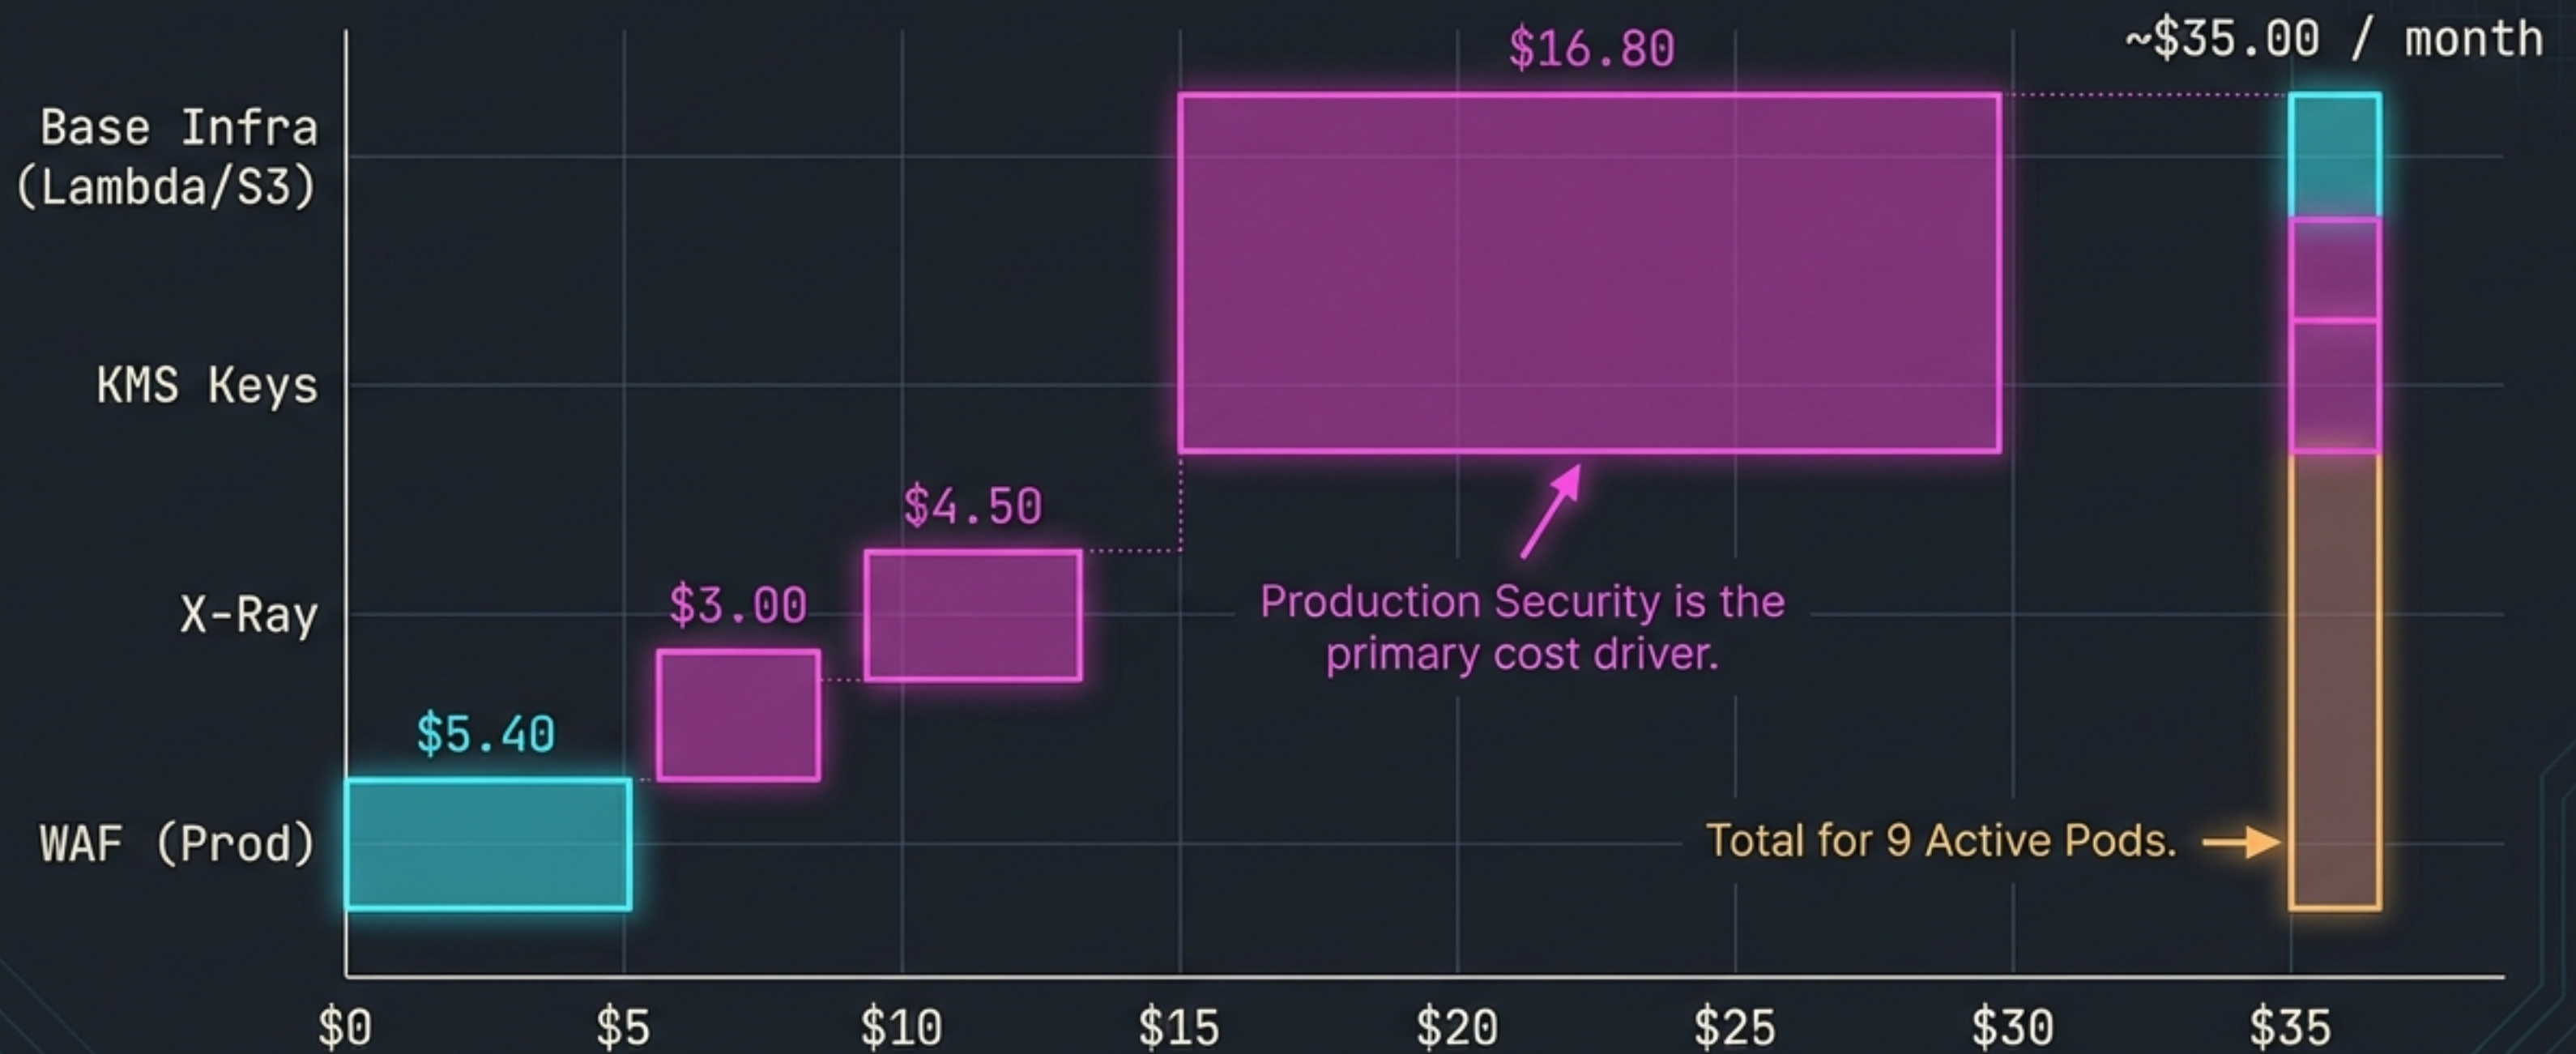

3 Regions x 3 Tiers = 9 Total Deployment Pods.

Hardening & Observability Layers

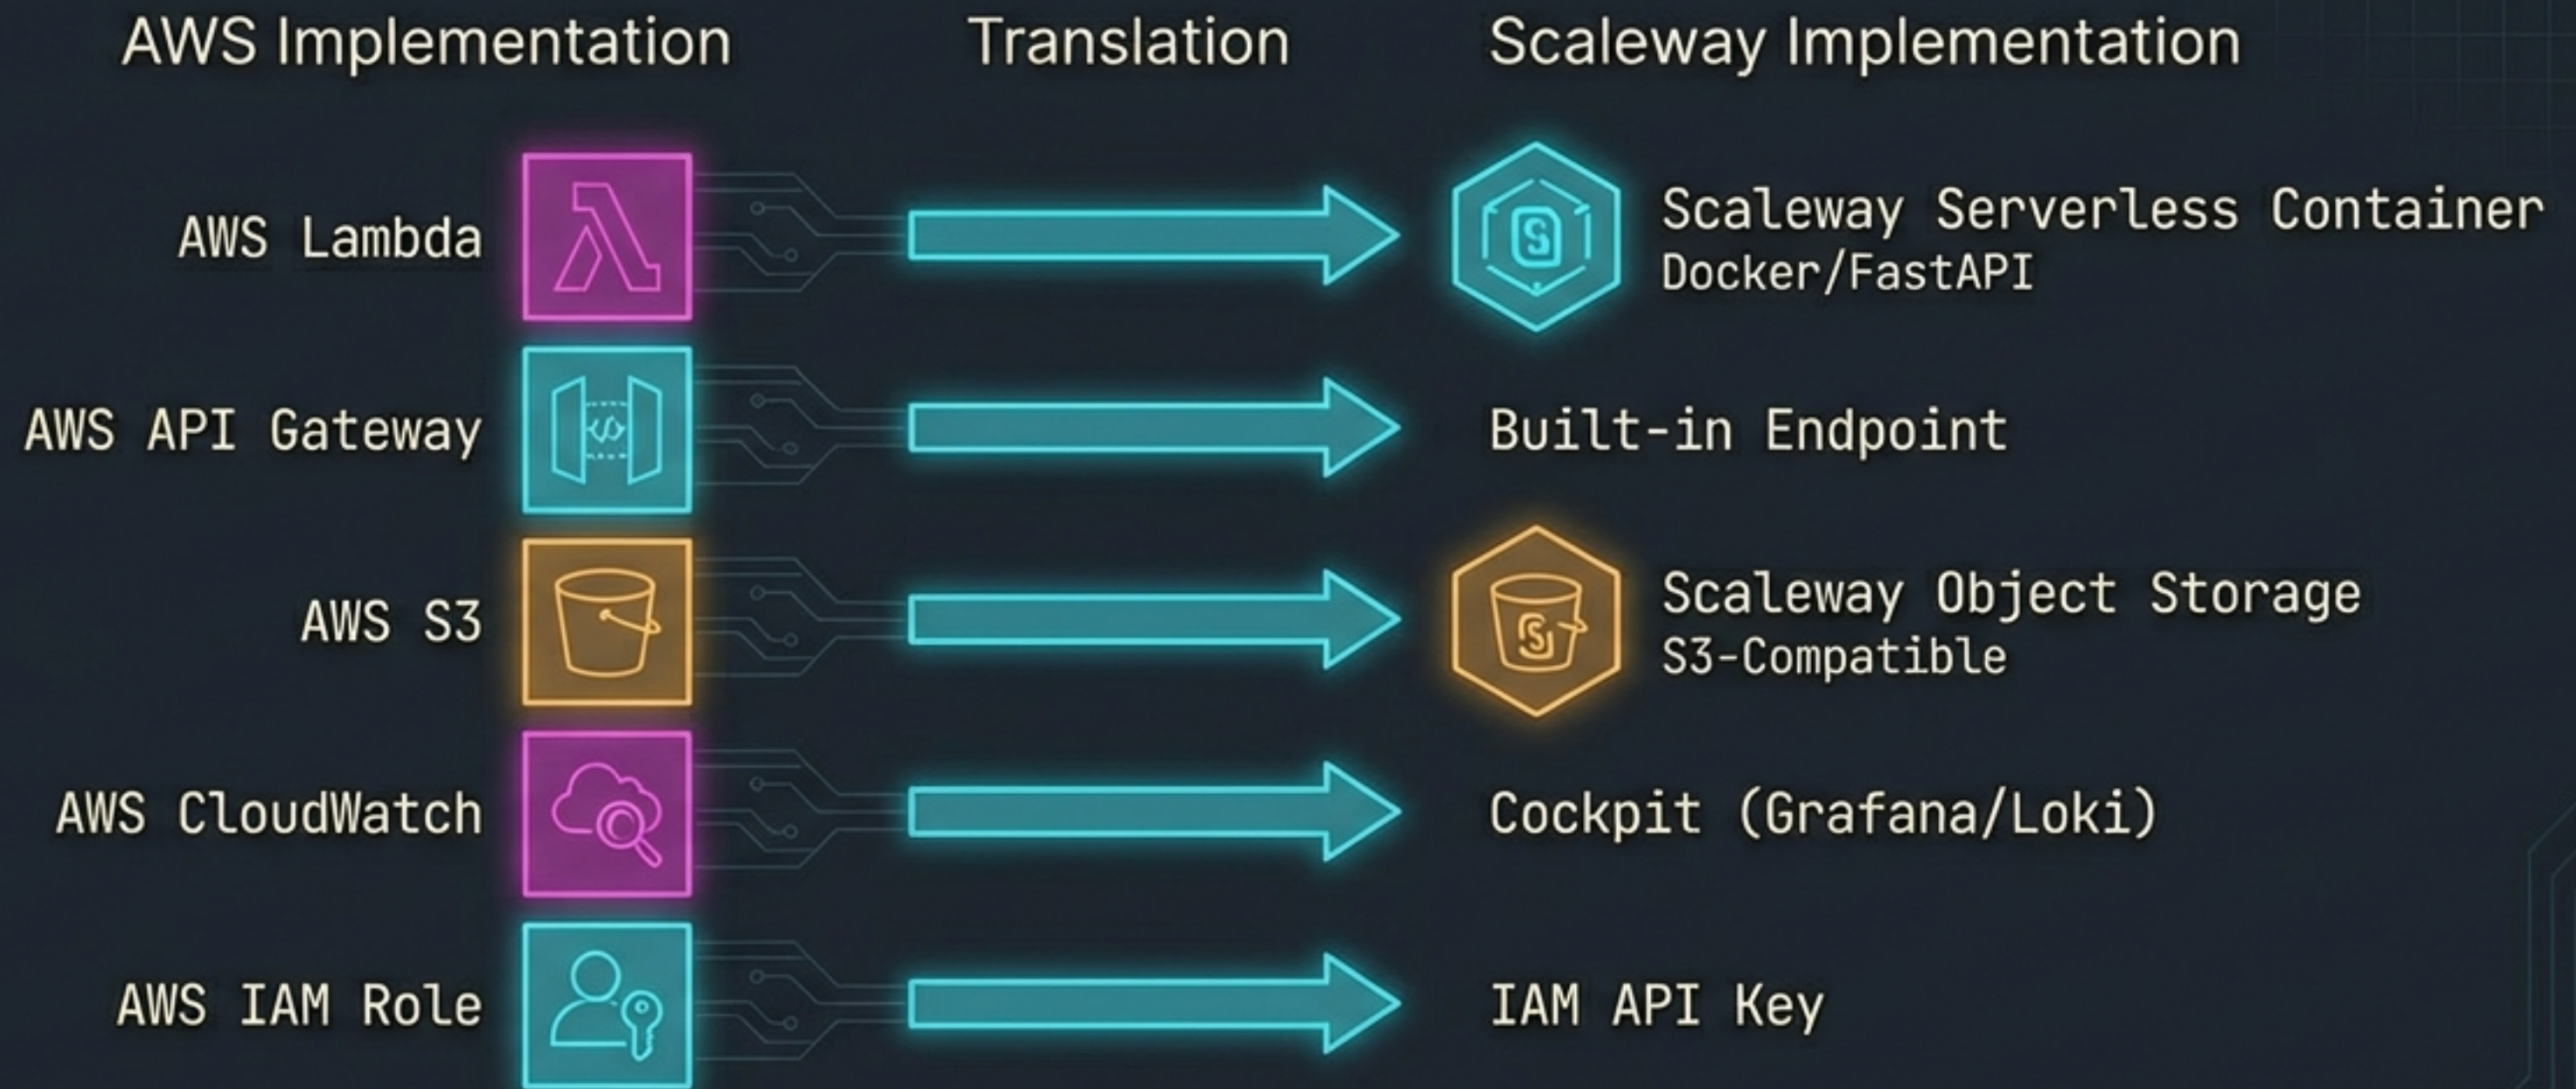

Optional for MVP. Mandatory for Enterprise Standard of Care.

Enterprise Economics: The Price of Scale

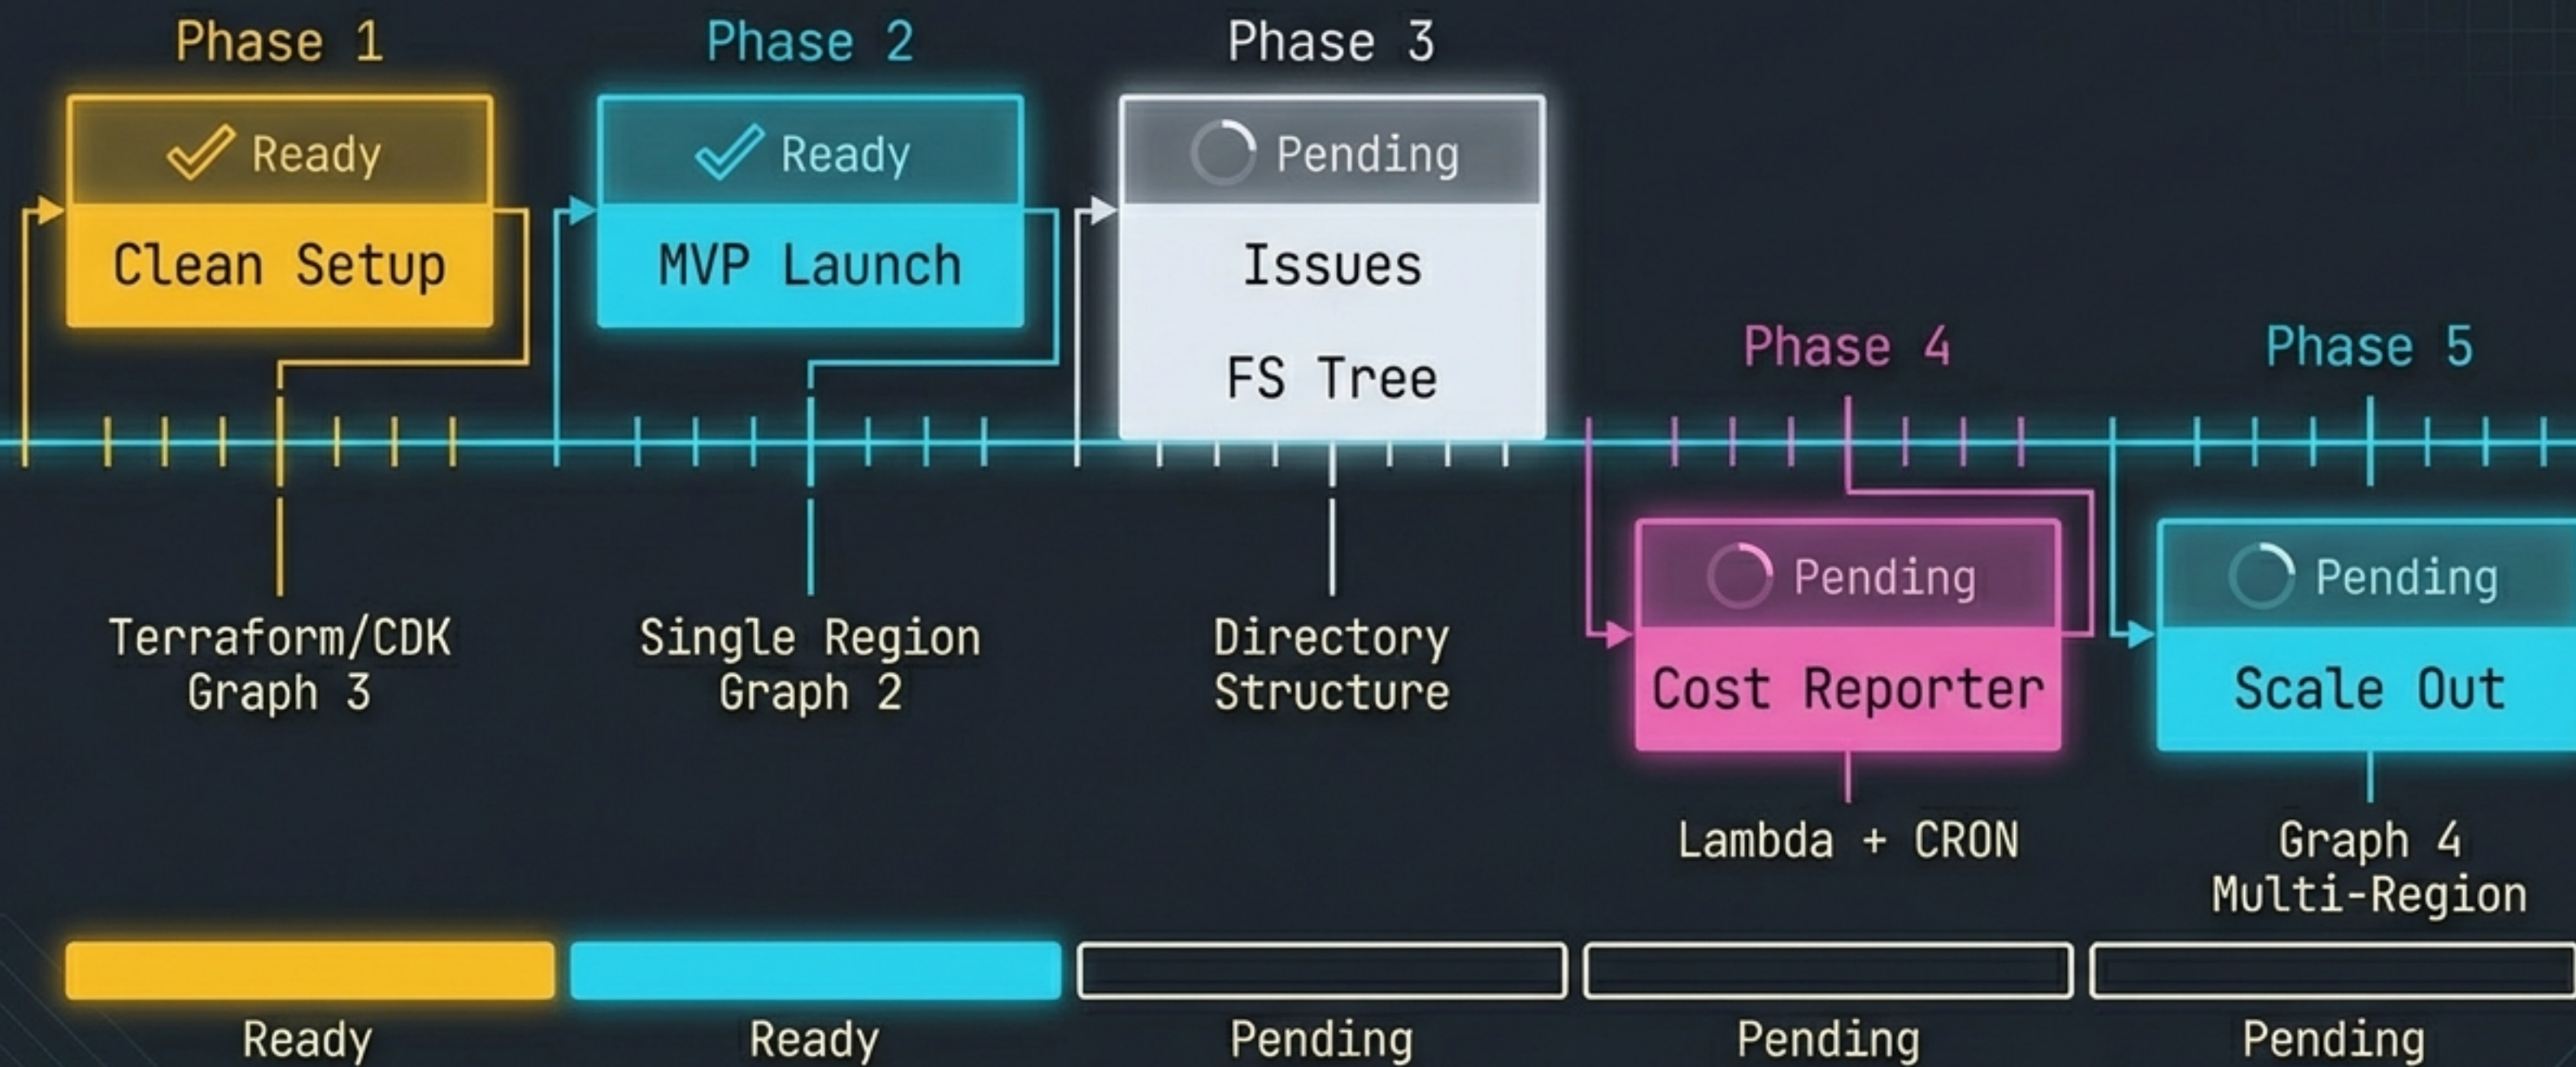

Portability: The Migration Path to Scaleway

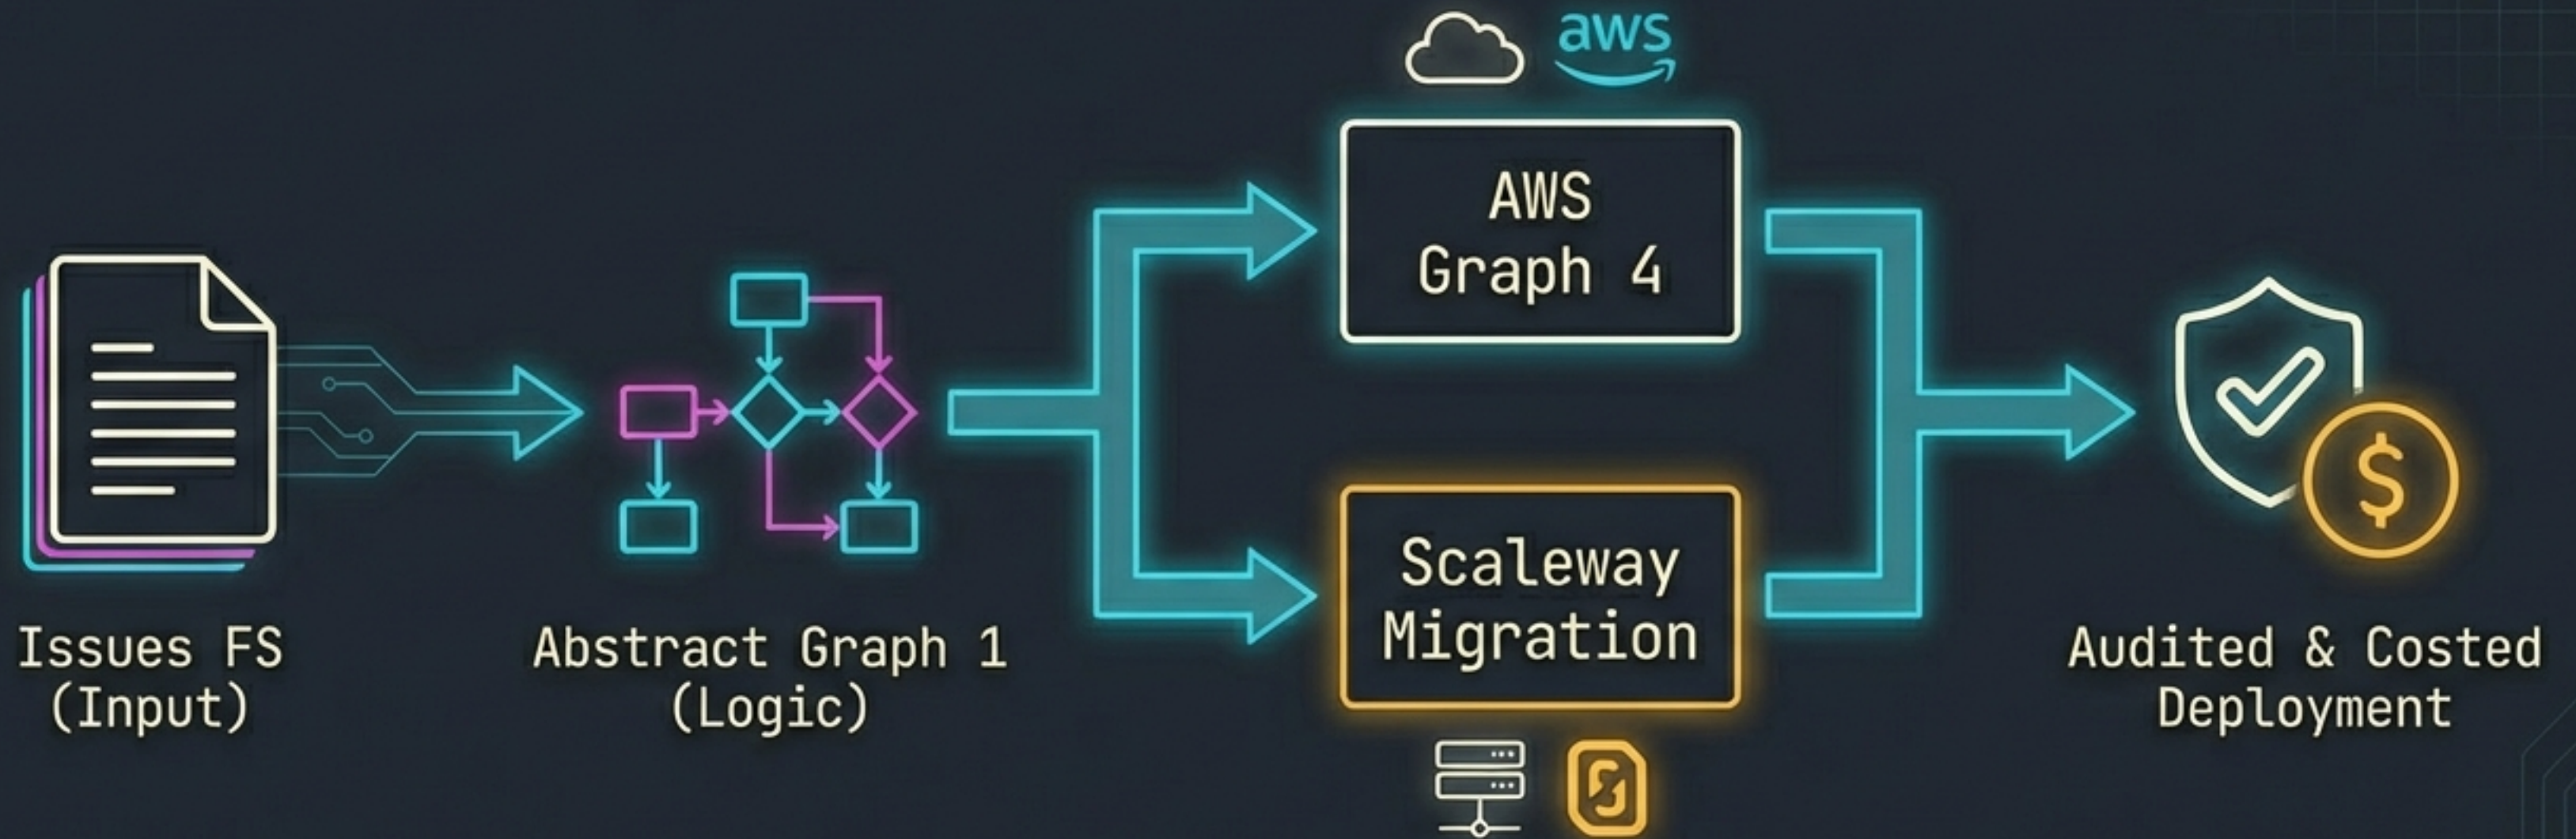

Logic is portable. Boto3 code remains identical.

Implementation Roadmap

Architecture Summary

A self-contained ecosystem for the Football Pilates Scheduler.
