

CONNECTED: SECURE TUNNEL (1.2 Gbps)

SYSTEM STATUS ● ●

Secure Send

Privacy-First, Zero-Knowledge File Sharing

SYSTEM LOAD:
45

ENCRYPTED STORAGE:
8.5 TB AVAILABLE

The Mandate: A Privacy-First Alternative

- ✓ **No Ads.**
- ✓ **No Tracking.**
- ✓ **End-to-End Encryption.**

The Core Difference:

Files are encrypted on the client device before upload.
The decryption key never leaves the browser.
Even a total server compromise yields only useless noise.

The Problem vs. The Solution

Status Quo (Broken Trust)

- Ad-saturated interfaces.
 - Server-side access to plaintext.
 - Opaque data harvesting.
 - Privacy Theatre.
- 
- An illustration depicting a state of broken trust. It features several stylized eyes in red and orange, some of which are looking at computer screens. The screens display the word 'AD' in red, indicating advertising. The background is dark with faint circuit-like patterns.

Secure Send (Zero-Knowledge)

- Radical Transparency.
 - Client-side AES-256-GCM.
 - Privacy by Design.
 - Server cannot decrypt data.
- 
- An illustration representing secure communication. It features a large, glowing green shield with a keyhole at the bottom, symbolizing protection and security. The shield is surrounded by green circuit-like patterns. The background is dark with faint circuit-like patterns.

The Core Innovation: Split Knowledge

“Even a complete server compromise,
S3 data leak, or URL exposure is harmless.”

The Encryption Workflow

01 Key Generation

Client generates AES-256-GCM symmetric key via Web Crypto API.

02 Local Encryption

Browser creates ciphertext + IV + auth tag (payload.enc).

03 Blob Upload

Ciphertext uploaded directly to AWS S3.

04 Key Display

Client displays base64 key for user to copy.

Why Symmetric?

High-speed encryption for large files.
No public/private key complexity needed.

STACK: AWS Serverless (M-Graph) • ORCHESTRATION: Claude Teams Agents • MANAGEMENT: Issues FS

Architecture: The M-Graph Framework

Stack:

- M-Graph (FastAPI on Lambda)
- AWS S3 (The Database)
- Environments: Dev, QA, Prod

Bypassing the bottleneck: Lambda handles logic, but never touches file bytes (avoiding 6MB limits).

Radical Transparency

We don't hide data collection in a policy. We display it in the interface.

STACK: AWS Serverless (M-Graph) • ORCHESTRATION: Claude Teams Agents • MANAGEMENT: Issues FS

The Sender Experience

The Receiver Experience

- **No Install Required.** 
- **No Account Needed**
(Token gates upload, not download). 
- **Client-Side Decryption** via **Web Crypto API.**  
- **Smart Error Handling:** 
Wrong key = Explicit error message, not corrupted file.

Admin & Control (Operator View)

Capabilities:

- Distribute beta access tokens.
- Monitor aggregate storage and usage.
- Kill switch for specific tokens.
- Manage 'Register Interest' waitlist.

Workflow & Orchestration

Issues FS

EPIC: Secure Send MVP

STORY: SND-1 Drag-and-Drop

TASK: Implement POST /transfers

TASK: Client-side Encryption Logic

Lifecycle

STACK: AWS Serverless (M-Graph) • ORCHESTRATION: Claude Teams Agents • MANAGEMENT: Issues FS

Roadmap: Scope & Future

MVP (Now)

- **Access:** Invite-only   (Token gated).
- **Limits:** Single file, Max 50-100MB.
- **Expiry:** 7 Days.
- **Sharing:** Manual Link/Key copy-paste.

Future (v2 / v3)

- **Billing:** Stripe Integration. 
- **Heavy Lifting:** Multipart uploads (>500MB). 
- **Convenience:** Email integration & Zip support. 
- **Teams:** Shared transfer history. 

Immediate Next Steps

- > CONDUCTOR: Instantiate Issues FS tree.
- > ARCHITECT: Begin Spike on Web Crypto & Pre-signed URLs.
- > DEVELOPER: Scaffold M-Graph & Dev environment.
- > QA: Draft test plans from User Stories.
- > DOCUMENTARIAN: Draft 'How it Works' copy.

- > THE BRIEF IS LOCKED. EXECUTION BEGINS NOW._
