

Wikipedia for Careers: Agentic Implementation Plan

Operational Blueprint for the SG/Send Team

STATUS: Implementation Concept
DATE: 26 Feb 2026
LICENCE: CC BY 4.0
TARGET: SG/Send Technical Collaborators

THE BOTTLENECK IS NOT THE IDEA. IT IS THE LABOUR OF PROCESSING INFORMATION AT SCALE.

TRADITIONAL MODEL

MANUAL TRANSCRIPTION. SLOW
OUTPUT. LIMITED REACH.
DECADES TO ACHIEVE COVERAGE.

AGENTIC MODEL

DISTRIBUTED NETWORK. 1000S OF
INTERVIEWS. MULTILINGUAL COVERAGE.
SYSTEMATIC PATTERN ANALYSIS.

THE REACH IS NOT LIMITED BY THE TEAM; IT IS LIMITED BY HOW WELL THE WORKFLOWS ARE DESIGNED.

PHILOSOPHY: HUMAN-LED, AGENT-MULTIPLIED

No Magic. Every step is explainable and inspectable.

Signed & Attributed. Who did what, when, and with what tool.

Version-Controlled. Git for careers—every edit tracked.

Incremental. Small, testable steps.

"This is not 'AI replaces researchers.' It is 'Agents handle the processable parts so humans can do the judgment work.'"

THE OPERATIONAL PIPELINE

PHASE 1: INTELLIGENT PREPARATION & BRIEFING

RECRUITMENT LOGISTICS

Agents draft personalised outreach.

Consent tracking is version-controlled and signed.

Subject chooses **anonymity level** (**Named** / **Anonymised** / **Sector-only**).

THE RESEARCH BRIEF

Not a generic questionnaire.
A targeted research document.

- Summarises known context.
- Identifies gaps to fill.
- Proposes opening questions & sensitivity notes.

Workflow: Agent drafts structure   Human Researcher reviews, adjusts, and approves.

PHASE 2: THE INTERVIEW MODE MATRIX

The question is not “human or agent?” but “which mode best serves this subject?”

HUMAN RESEARCHER

Best for: High stakes, public figures, deep judgment calls.

AGENT VOICE

Best for: Scale, anonymity, candour (reduced social pressure).

AGENT TEXT

Best for: Reflective subjects, asynchronous needs.

MULTIMODAL

Best for: Visual thinkers, technical demos, diagramming.

Insight:

Empirical evidence suggests subjects are often more candid about failure and self-doubt with an agent than a human.

PHASE 2a: THE AGENT-CONDUCTED WORKFLOW

PHASES 3-5: FROM RAW DATA TO STRUCTURED WISDOM

EXTRACTION (PHASE 3)

- Timelines & Pivots
- Skills & Mentors
- Human reviews flags

PATTERN ANALYSIS (PHASE 4)

- "What correlates with success?"
- Unexpected backgrounds
- Output version: v0.3

CROSS-MAPPING (PHASE 5)

- Transferable skills
- E.g., Finance Skill X maps to Tech Role Y
- Solving the "Forest Problem"

PHASE 6: THE REFERENCE STORY

CONTENT:

Honest about uncertain parts, pivots, and what actually mattered.

WORKFLOW:

1. **Agent:** Structures draft, validates timeline against patterns. 
2. **Human:** Writes the narrative. 
3. **Subject:** Approves before publication. 

Not a biography. A career map.

SCALING BEYOND ENGLISH & BORDERS

DISSOLVING CONSTRAINTS: TIME & MEDIUM

Asynchronous Time

Pause/Resume capability.
Shift-work friendly.
Global timezones.

Voice

For verbal processors.

Text

For reflective writers.

Visual

For diagrams and technical drawings.

Provenance metadata records the medium (e.g., `interview_medium: hybrid`).

PROVENANCE: THE TRUST LAYER

From institutional trust to cryptographic attestation.

Chain of Custody

Utilises SG/Send PKI signing infrastructure to create a fully auditable knowledge artefact.

THE LAST-MILE CREDIT SOLUTION

Making invisible labour visible.

→ A permanent, verifiable record of contribution. Value flows to the builders.

OPEN SOURCE INFRASTRUCTURE STACK

AVAILABLE (Ready to Deploy)

- ☒  Git (Versioning)
- ☒  SG/Send Vault (Encrypted Storage)
- ☒  PKI Signing (Attribution)

TO BUILD (Development Required)

- ☐  Agent Workflows (Transcription/Tagging)
- ☐  Cross-Corpus Analysis Agents
- ☐  Public Knowledge Base (The Site)

Philosophy: Open Source by default. Workflows and prompts are public.

THE PILOT: UK CYBERSECURITY

THE PRAGMATIC VERSION: Do the minimum viable thing, prove it, iterate.
