

FROM ENGLISH TO KLINGON IN ONE SESSION

How SGraph Send Shipped **Multilingual**, **Cookie-Free**, and **Live**.

In a single working session, SGraph Send went from English-only to **four languages**, removed **Google Analytics** entirely, shipped **three UI versions**, and announced the product on LinkedIn — in **Klingon**.

TWO BRIEFS, ONE MANDATE

1. THE USER BRIEF

Reduce friction. The first real user reported that sharing a file required copying a link and a key separately. Two actions, high risk of error.

2. THE PRIVACY BRIEF

Define the product's identity. Remove Google Analytics. Remove all cookies. Replace everything with a custom server-side solution.

"ZERO COOKIES IS A DESIGN DECISION, NOT A COMPROMISE."

v0.1.1 – Solving Friction with Hash-Fragments

Problem: Users had to send a URL and a decryption key separately.

Users were required to share the file link and the required decryption key in two separate actions, leading to a high risk of error and friction.

Solution: The Hash-Fragment URL (#).

Utilizing the URL hash fragment (#) allows for embedding the decryption key directly within the link, which is never sent to the server.

Result: One link. One click. The server never sees the key, keeping the Zero-Knowledge promise intact.

v0.1.2 – The Architecture of Language

- **Every** piece of user-facing text externalised into JSON locale files.
- **Event-driven** i18n system built using Web Components.
- **Performance:** No page reloads. No external frameworks. No dependencies.

Immediate Result: English and Portuguese shipped simultaneously.

v0.1.3 – Klingon as a Stress Test

SoHvaD pagh

(Zero Knowledge)

tlhIngan Hol ▾

Arabic

Arabic

Japanese

tlhIngan Hol

Polasana

Denain

The Insight: Klingon is a proof of concept, not a gimmick.

- If the system can handle **tlhIngan Hol** (different grammar, character patterns), it is proven to handle any real-world language.
- Future-Proof: Arabic (RTL) or Japanese (variable widths) can be added by simply dropping in a JSON file.
- Architecture: Adding a language requires NO code changes and NO UI rebuilds.

The “Zero Cookie” Revolution

Google Analytics was integrated on launch day. It lasted less than 24 hours.

1. **Data Sovereignty:** GA sends data to a third-party processor.
2. **Compliance:** Requires complex cookie consent infrastructure (GDPR, PECR).
3. **Accuracy:** Client-side data can be blocked or gamed.
4. **Integrity:** Contradicts the product's core promise of zero tracking.

Verification: Open your browser's developer tools on send.sgraph.ai. Check the cookies. There are none.

The Replacement: LETS Server-Side Analytics

Visibility without invasion.

Outcome: Real-time traffic visibility and per-file activity tracking with no client-side JavaScript and no consent banners.

The Engine: 14 Active AI Roles

28 role responses produced in one session.

The Advocate

Assessed trust across 5 personas.
Identified 6 accessibility gaps.

The Ambassador

Developed 'Triple-Zero' messaging
(Zero Cookies, Zero Knowledge, Zero
Third-Party Tracking).

The Sherpa

Maintained friction scorecard. 17
points tracked, 2 resolved.

The Journalist

Produced LinkedIn drafts and content
calendar.

Iterative Flow Development (IFD)

Philosophy: Never overwrite a working UI.

📁 sgraph_ai_app_send__ui__user/

— 📁 v0.1.0/ Launch version - English only

— 📁 v0.1.1/ Hash-fragment URLs

— 📁 v0.1.2/ Multilingual

— 📁 v0.1.3/ Klingon - CURRENT

Safety Net

Each version inherits from the previous. If v0.1.3 fails, the system serves v0.1.2 by changing a **single configuration pointer**.

No complex rollback procedure.

The Session Scorecard

Friction: Significantly reduced (One-click access vs. copy-paste).

Reach: Expanded from 1 to 4 languages.

Security: Zero-Knowledge architecture hardened via Hash-Fragments.

Privacy: The 'Triple-Zero' standard achieved (0 Cookies, 0 Knowledge, 0 Third-Party Tracking).

"The human stakeholder wrote two briefs. The AI team shipped three UI versions."

What Comes Next

Upcoming Sprint: Server & Admin

- **Cache Service:** Backbone for tokens and cost tracking.
- Admin Dashboard: Operational visibility.
- Token Management: Human-friendly invitations for the friends-and-family rollout.

Call to Action

- ✓ **Use:** [send.sgraph.ai](#) (Send files in Klingon).
- ✓ **Verify:** [docs.send.sgraph.ai](#) (Review the architecture).

The code ships daily. The team learns from every user.
