

Daily Brief #2: The Zero-Cookie Architecture

Replacing surveillance with server-side truth.

To: All Roles via Conductor

DECISION: REMOVE GOOGLE ANALYTICS

Current State: The Trap

- ✗ Breaks zero-tracking promise
- ✗ Forces consent banners
- ✗ GDPR/PECR compliance overhead
- ✗ Inaccurate client-side data
- ✗ Third-party surveillance (GA)

Target State: The Pivot

- ✓ No Cookies. Zero. None.
- ✓ No Consent Banners
- ✓ Server-Side Truth
- ✓ Market Differentiator: Trust

THE CACHE SERVICE ARCHITECTURE

Mechanic:

1. Hash the human-readable string.
2. Resolve to Cache ID (The Gravity).
3. Access the full file tree.

STORAGE LOGIC: TEMPORAL & LATEST

THE DATA PHILOSOPHY: L.E.T.S.

Load. Extract. Transform. Save.

Optimization: Calculate once. Save the result. Next query only processes the delta.

App 1: Server-Side Site Analytics

- ✓ No Client JS.
- ✓ No Cookies.
- ✓ No 3rd Party Sharing.

Client-Side (GA):
Intrusive, Inaccurate, Blocked.

Server-Side:
Invisible, Accurate, Private.

App 2: The Token System

"Human-to-Machine" bridge

Strategy: Every token is a prototype for a paid plan or budget.

App 3: Local Storage Transparency

UX Principle: Open the hood.

App 4: Unit Economics (AWS Costs)

+

AWS Cost Bill

=

**COST
PER USER**

Per User

LETS process for costs

1. Collect Cost Data (Don't re-download)
2. Store in Cache
3. Aggregate (Daily/Monthly)

The Process: Iterative Flow Development (IFD)

STATUS: NON-NEGOTIABLE

1. Never Override (Create new version).
2. Minor versions extend.
3. Major versions consolidate.
4. Always allow rollback.

Admin UI Strategy

Logic: Build complex features in **Admin** first. **Iterate fast**. Port to user site later.

Action Items: Policy & Architecture

DPO & GRC

- Formal analysis: Remove GA.
- Risk Assessment: Risk of keeping GA > Risk of removing.
- Review Local Key caching privacy.

ARCHITECT

- Design Cache Service Schema.
- Define Token-to-Hash resolution.
- Analytics data structure.

Action Items: Engineering

DEV

- Implement Cache Service & LETS.
- Build Site Analytics (Priority 1).
- **REMOVE GOOGLE ANALYTICS.**
- Strict IFD Compliance.

DEVOPS

- Enable CloudFront Logs (IP Masked).
- Add AWS Cost Data to pipeline.

Roadmap & Priorities

Server-Side Truth.

The Cache Service is the new gravity.

Success Metric: Answering 'Is anyone using the site?' without invading privacy.
