

Wardley Maps in the SGraph Send Project

Transitioning from Exploration to Productisation

EXPLORATION DOMAIN (GENESIS)

Chaotic Terrain

Emerging Patterns

Rapid Prototyping

EVOLUTION & TRANSITION

PRODUCTISATION DOMAIN (VILLAGER)

Structured Grid

Defined Services

Standardised Infrastructure

The Evolution of a Team

Status

MVP Complete (Feb 2026). The core flow of Upload, Encrypt, Token, and Download is functional.

The Pivot

Transitioning from a single "Explorer-mode" team to a dual structure: **Explorers (Discovery)** and **Villagers (Productisation)**.

The Goal

To simultaneously push the frontier of new features while rigorously stabilising the core product for public release.

Key Enabler

The Cartographer role will map this transition, ensuring the split is based on component maturity, not opinion.

February 2026: The End of Pure Exploration

MVP Delivered. "It works. It's real."

Why We Cannot Stay in “Explorer Mode”

Attempting to do both with the same team results in mediocre exploration (fear of breaking prod) and unstable products (focus on the next shiny feature).

Three Stages of Team Evolution

The SGraph Strategy: Two Teams, Not Three

Our Immediate Operating Model

Explorer Team ACTIVE

Continuing
discovery.

Villager Team ACTIVE

Hardening
the MVP
components.

Town Planners FUTURE STATE

Premature.
We have no
commodities yet.

Town Planners are for commodity-stage components. Introducing bureaucracy now would be premature.

The SGraph Send Evolution Map

Evidence-based split: Components are plotted by maturity, not opinion.

The Art of the Theft: The Handover Protocol

Distinct Environments & Infrastructure

The Lab

- Separate AWS Resources
- Experimental Branch
- Rapid Cadence

The Factory

- Separate AWS Production
- Stable Release Branch
- Scheduled Cadence

The Golden Rule: Explorer experimentation must never accidentally break the Villager production environment.

Versioning in a Dual-Team World

Alignment with Iterative Flow Development (IFD)

The handover is the moment accumulated minor versions become a Release Candidate.

The Pioneers

Explorer Roster

Role Cards

Builders

Architect, Designer, Dev

Building first versions.

Role Cards

Storytellers

Journalist, Ambassador

Narrative and market fit.

Role Cards

Guides

Sherpa, Advocate

Observing usage and trail discovery.

The Settlers

Villager Roster

Role Cards

Operations

DevOps

Infrastructure and
monitoring.

Role Cards

Assurance

QA

Stability verification.

Role Cards

Compliance

GRC, DPO

Risk, Compliance, Data
Protection

The Connective Tissue

Shared Roles Spanning the Divide

The Cartographer: Making the Map Operational

The Cartographer is the central operational figure.

Responsibilities: Maintains the Map (Evidence over opinion).

- Visualises the Handover pipeline.
- Tracks trajectory.

Criticality: Without the Cartographer, the distinction between Explorer and Villager is just an opinion.

The Maturation of SGraph Send

**Explorers Explore. Villagers Productise.
The Project Evolves.**
