

SGraph Send

Design Partnership Kickoff

Prepared for Cruz & Cruz
February 2026

Encrypted file sharing. Zero knowledge. Zero fuss.

The Reality of Modern File Sharing

Every file sharing service today can read your files.

How people share files today

- Email attachments (size limits, no encryption)
- WeTransfer / Dropbox (server can read files)
- Slack / Teams (stored in plaintext forever)
- Google Drive (scanned, indexed, ad-targeted)

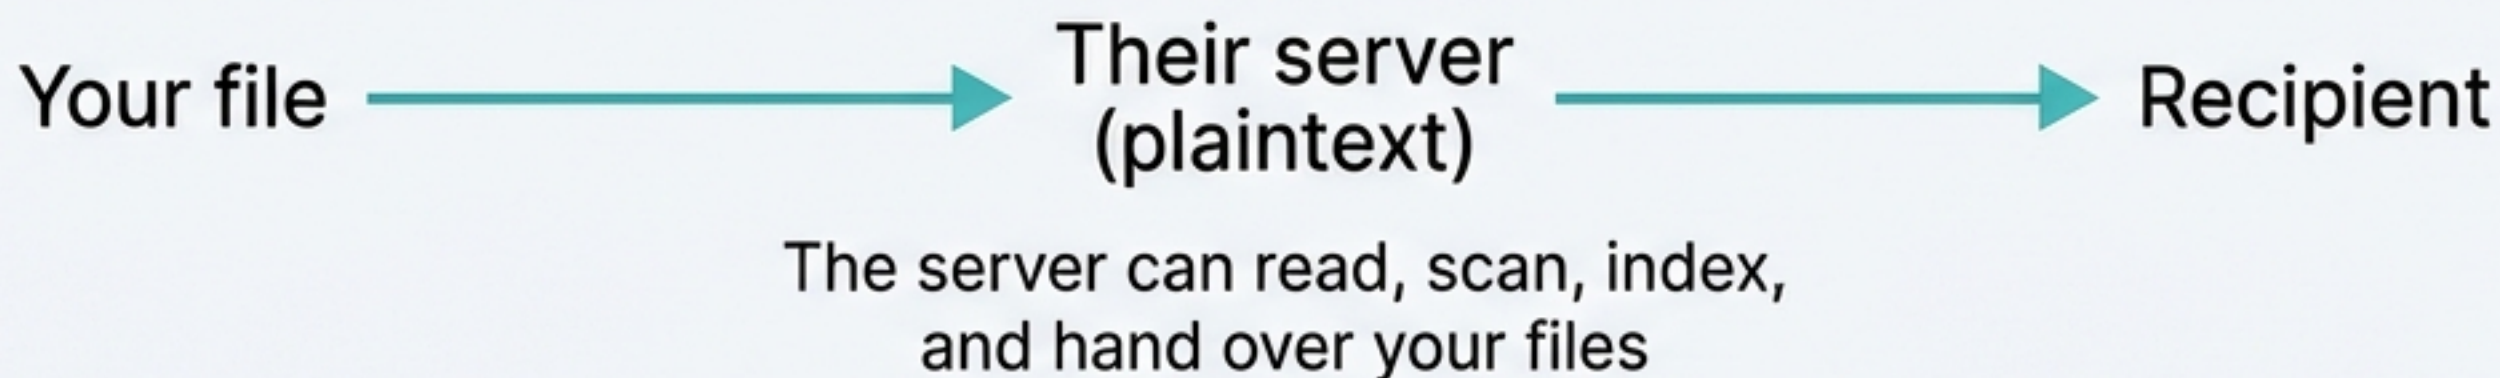

What can go wrong

- Data breaches expose files to attackers
- Employees or insiders can access content
- Legal requests compel data handover
- AI tools silently process your documents

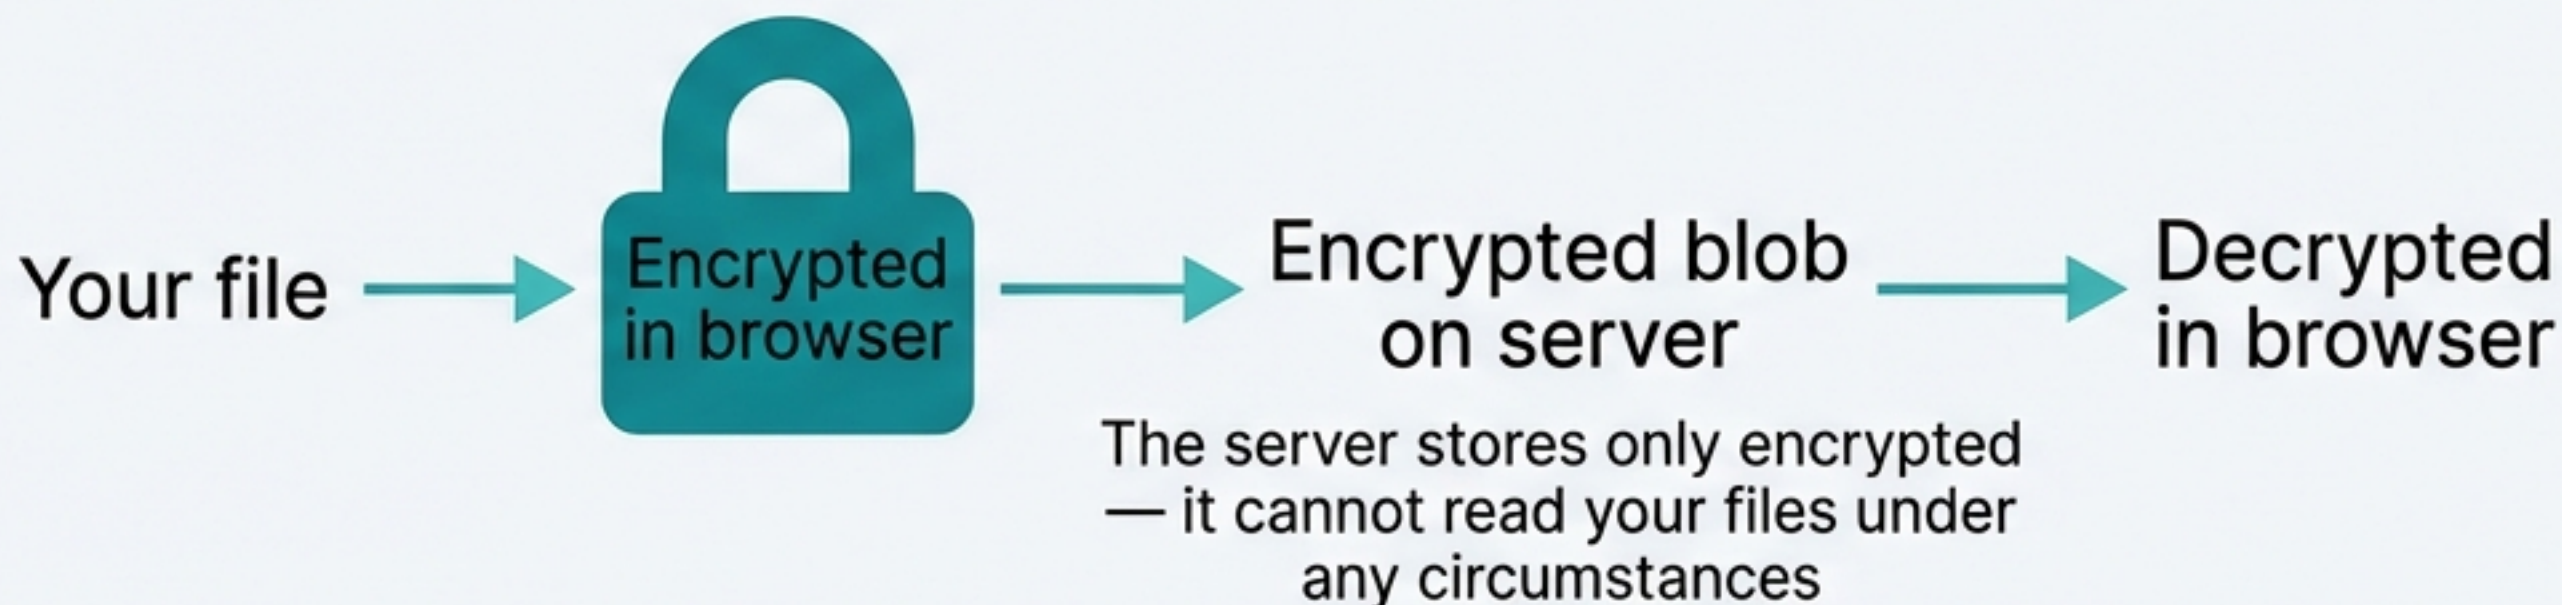

Every file sharing service today can read your files.

The Architecture Difference

WeTransfer

SGraph Send

We're like WeTransfer, except we literally cannot read your files.

Why Privacy Matters Now

Privacy regulations tightening globally

GDPR, HIPAA, DORA – compliance is now mandatory

Remote work drives cross-boundary sharing

Sensitive files move between companies, countries, devices daily

AI tools process sensitive documents

Every file uploaded to an AI service is a potential leak

Zero-trust is becoming the standard

The assumption: no server should be trusted with plaintext data

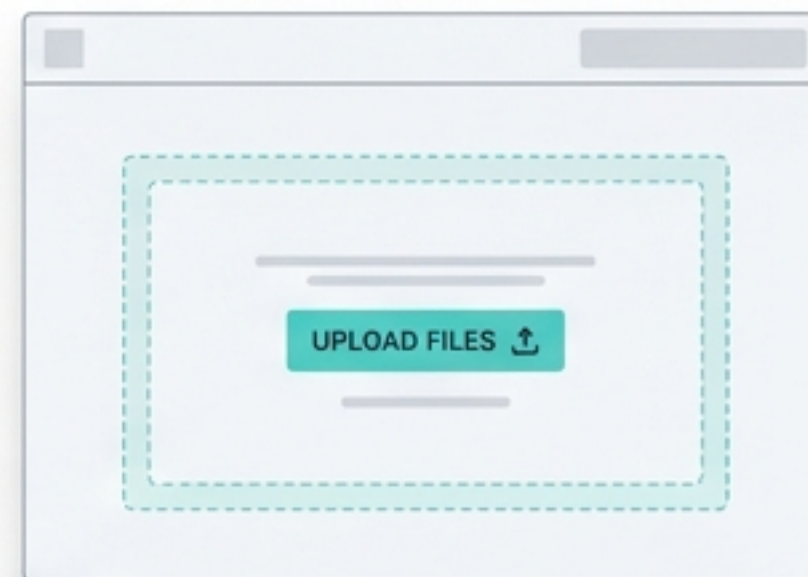

JetBrains Mono

Privacy-first file sharing isn't a niche – it's the future.

SGraph Send: The Working MVP

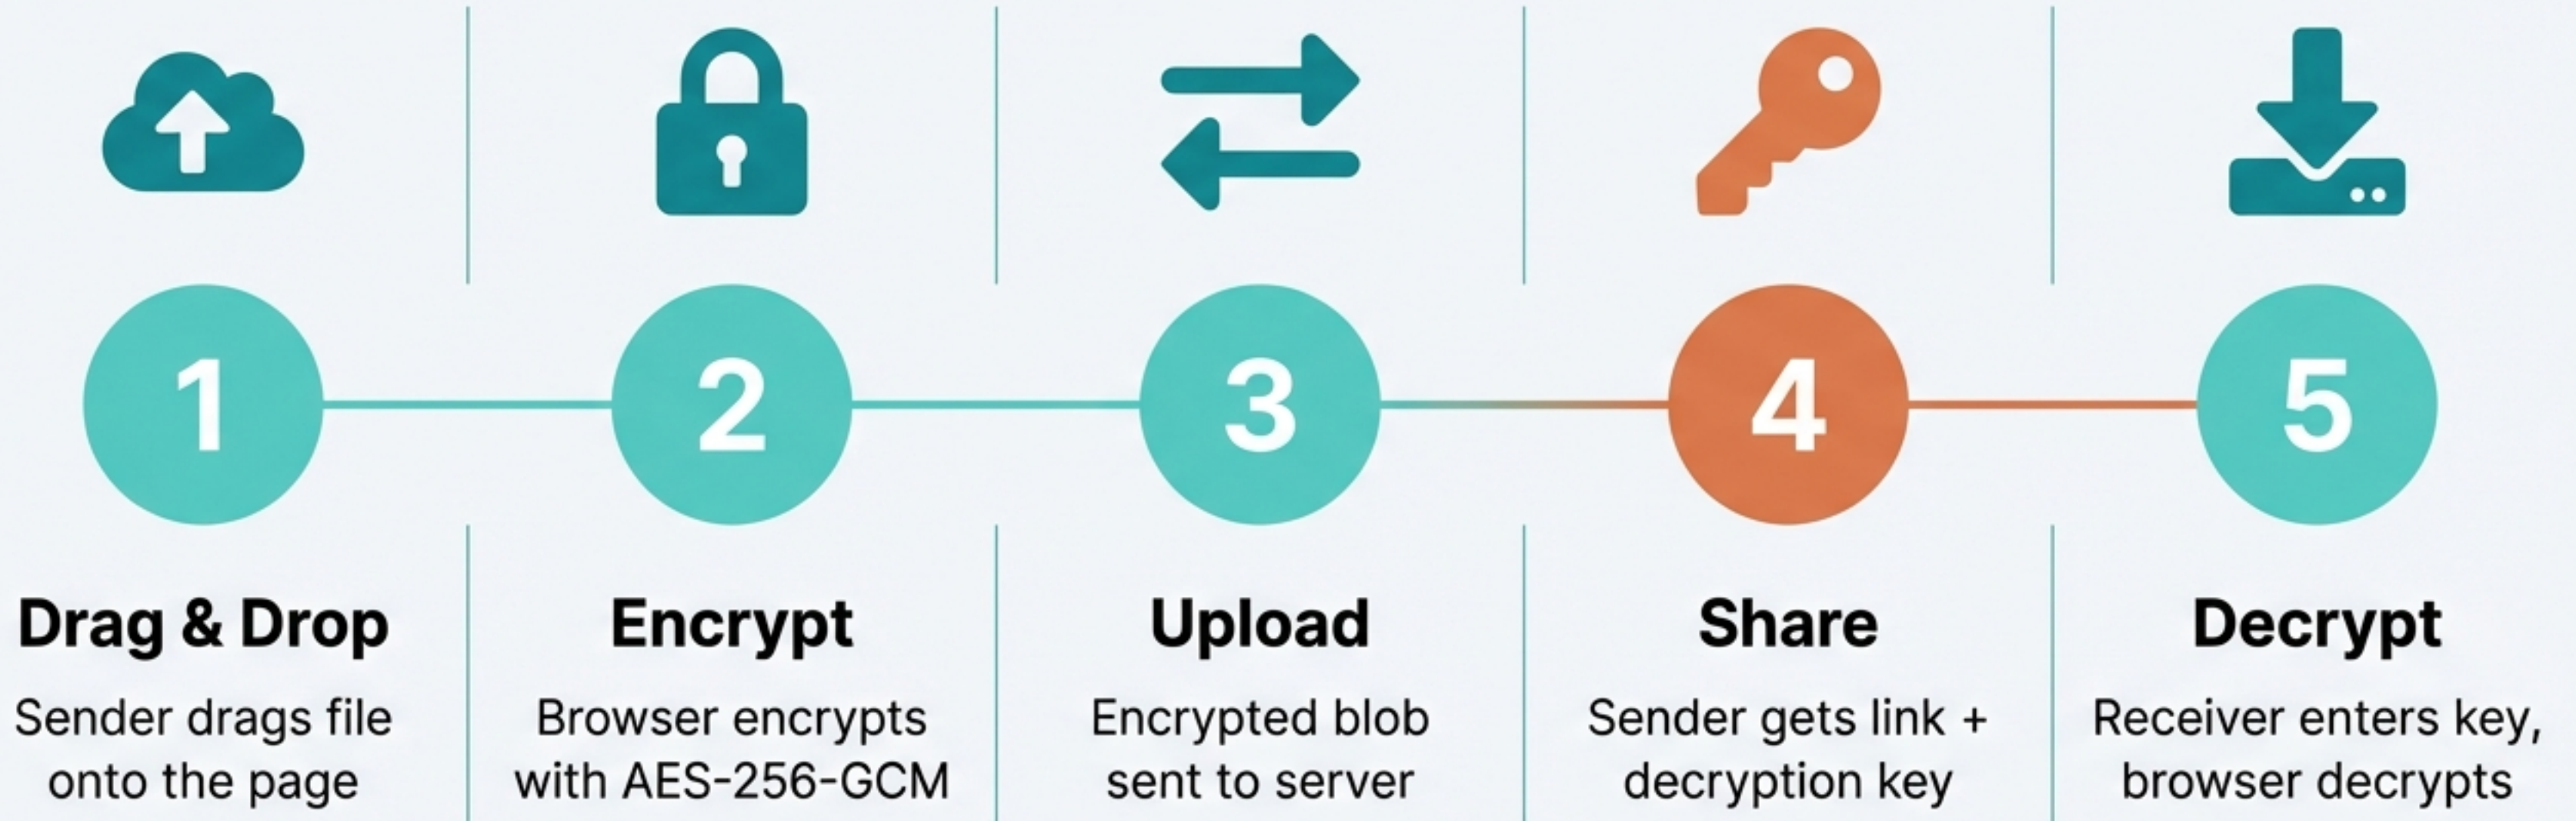

`send.sgraph.ai` – Live Today

- 🔒 Browser-side AES-256-GCM encryption
- 🛡️ Token-based access control with usage limits
- 👁️ Transparency panel showing exactly what we store
- 🚀 Zero cookies, zero tracking, zero third-party scripts

Encrypted file sharing. Zero knowledge. Zero fuss.

How It Works

The decryption key never touches our servers.

Radical Transparency

What we store	What we never see
✓ Hashed IP address (SHA-256)	✗ File name
✓ Timestamp of transfer	✗ File content
✓ File size in bytes	✗ Decryption key
✓ Content type hint	✗ Raw IP address

We don't just promise privacy — we prove it.

The SGraph Product Family

<code>send.sgraph.ai</code>	Encrypted file sharing	Live MVP ↗
<code>image.sgraph.ai</code>	Image processing	Planned
<code>text.sgraph.ai</code>	Semantic text generation	Planned
<code>billing.sgraph.ai</code>	Usage-based billing	Planned

Who Uses SGraph Send

Privacy-Conscious Professional

Lawyer, journalist, consultant. Sends contracts securely.

Tech-Savvy Developer

Shares credentials, API keys. Wants transparency and open source.

Everyday User (Friends & Family)

Shares photos and large files. Needs dead-simple, zero jargon.

Enterprise Admin

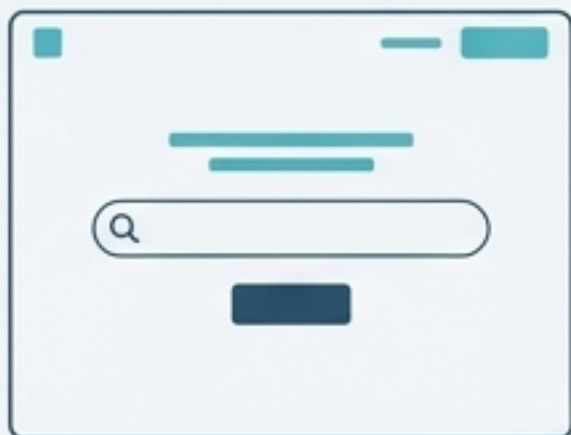

Manages tokens, monitors usage. Needs dashboards and control.

The Design Challenge

 The file-sharing utility is immediately clear. The differentiation isn't landing yet. Our biggest design challenge: make encryption feel effortless, not scary.

JetBrains Mono
Design is our competitive advantage.
Security is table stakes.

Five Key Screens

1

Landing Page

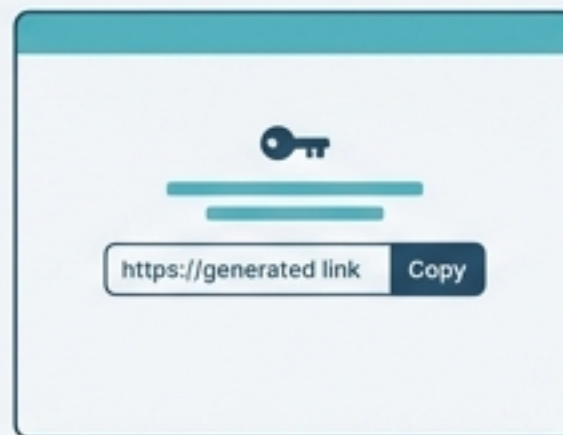

First impression —
“What is this?”

2

Upload Flow

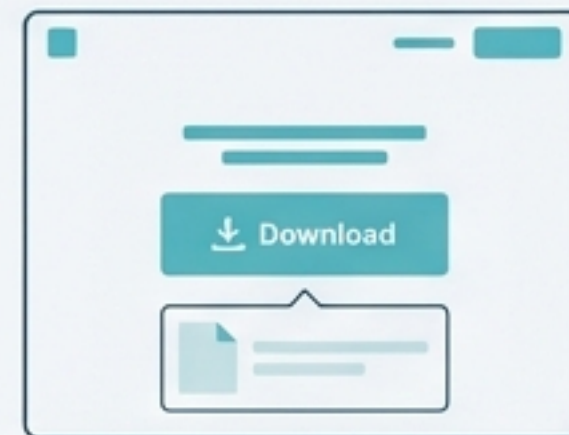

Encryption in action
— the core
experience

3

Upload Complete

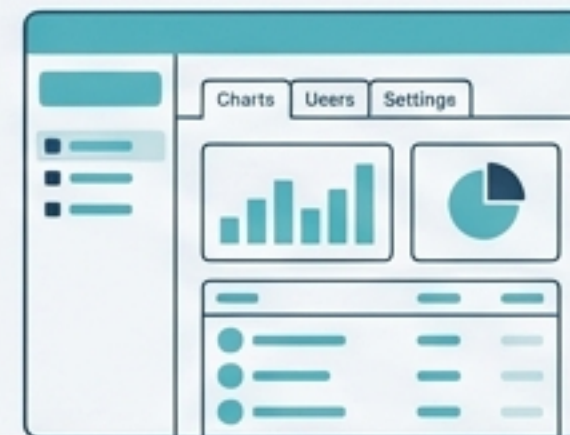

Link + key +
transparency —
trust moment

4

Download Page

Receiver experience
— also a brand
landing page

5

Admin Console

Token management
+ stats dashboard

Each screen tells a different part of the trust story.

Technology Stack & Constraints

Built for design flexibility from the ground up

Vanilla JS + Web Components

No framework lock-in – fully encapsulated, reusable UI elements

CSS Custom Properties

Single class change switches themes – five themes from day one

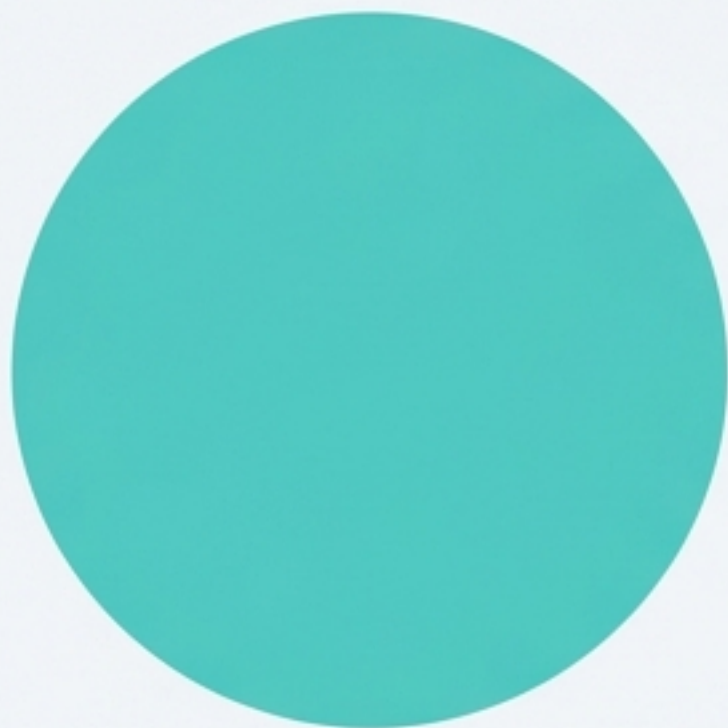

Web Crypto API

Client-side AES-256-GCM encryption – never leaves the browser

No Text in Images

All content decoupled from design assets – multilingual-ready (i18n)

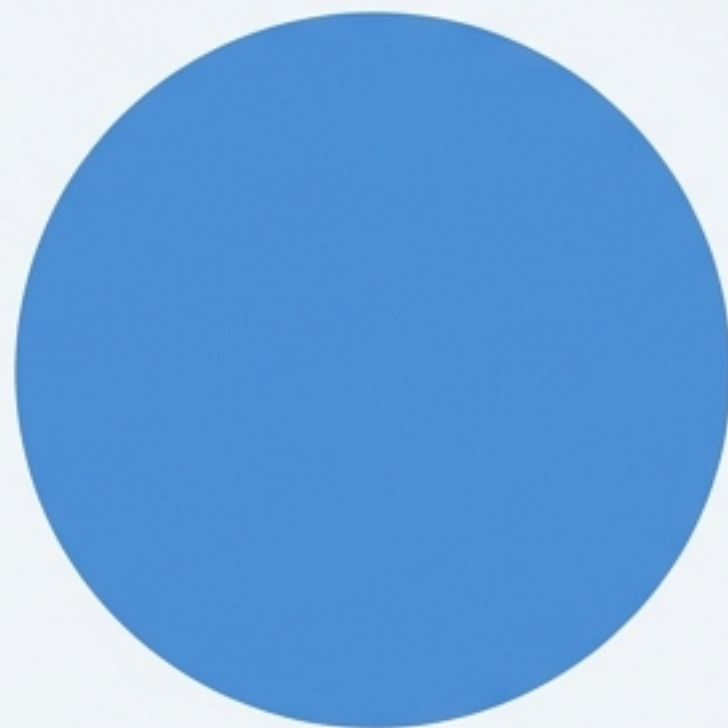

Theme Definitions

#4ECDC4

Glacier

Cool, trust-evoking

#4A90D9

Ember

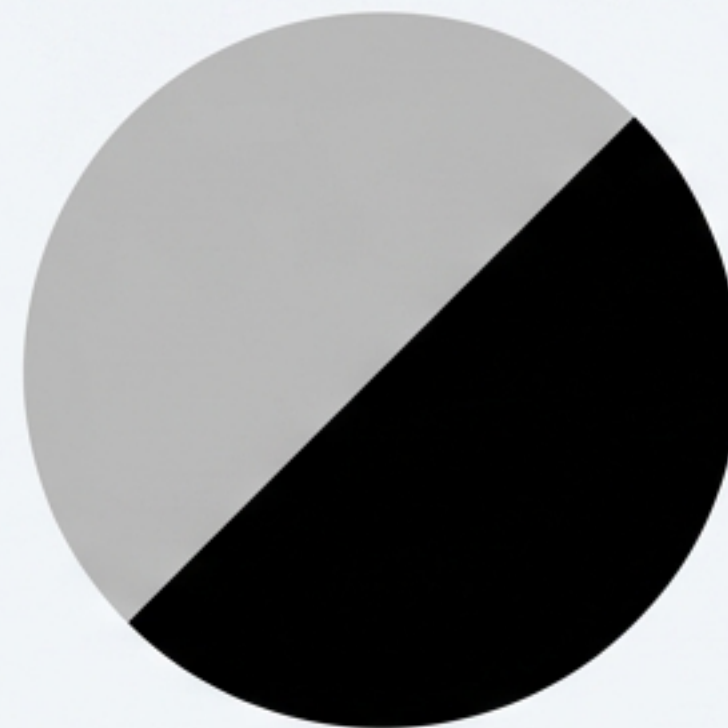

Warm, approachable

#E07C4F

Dark Mode

Low-light environments

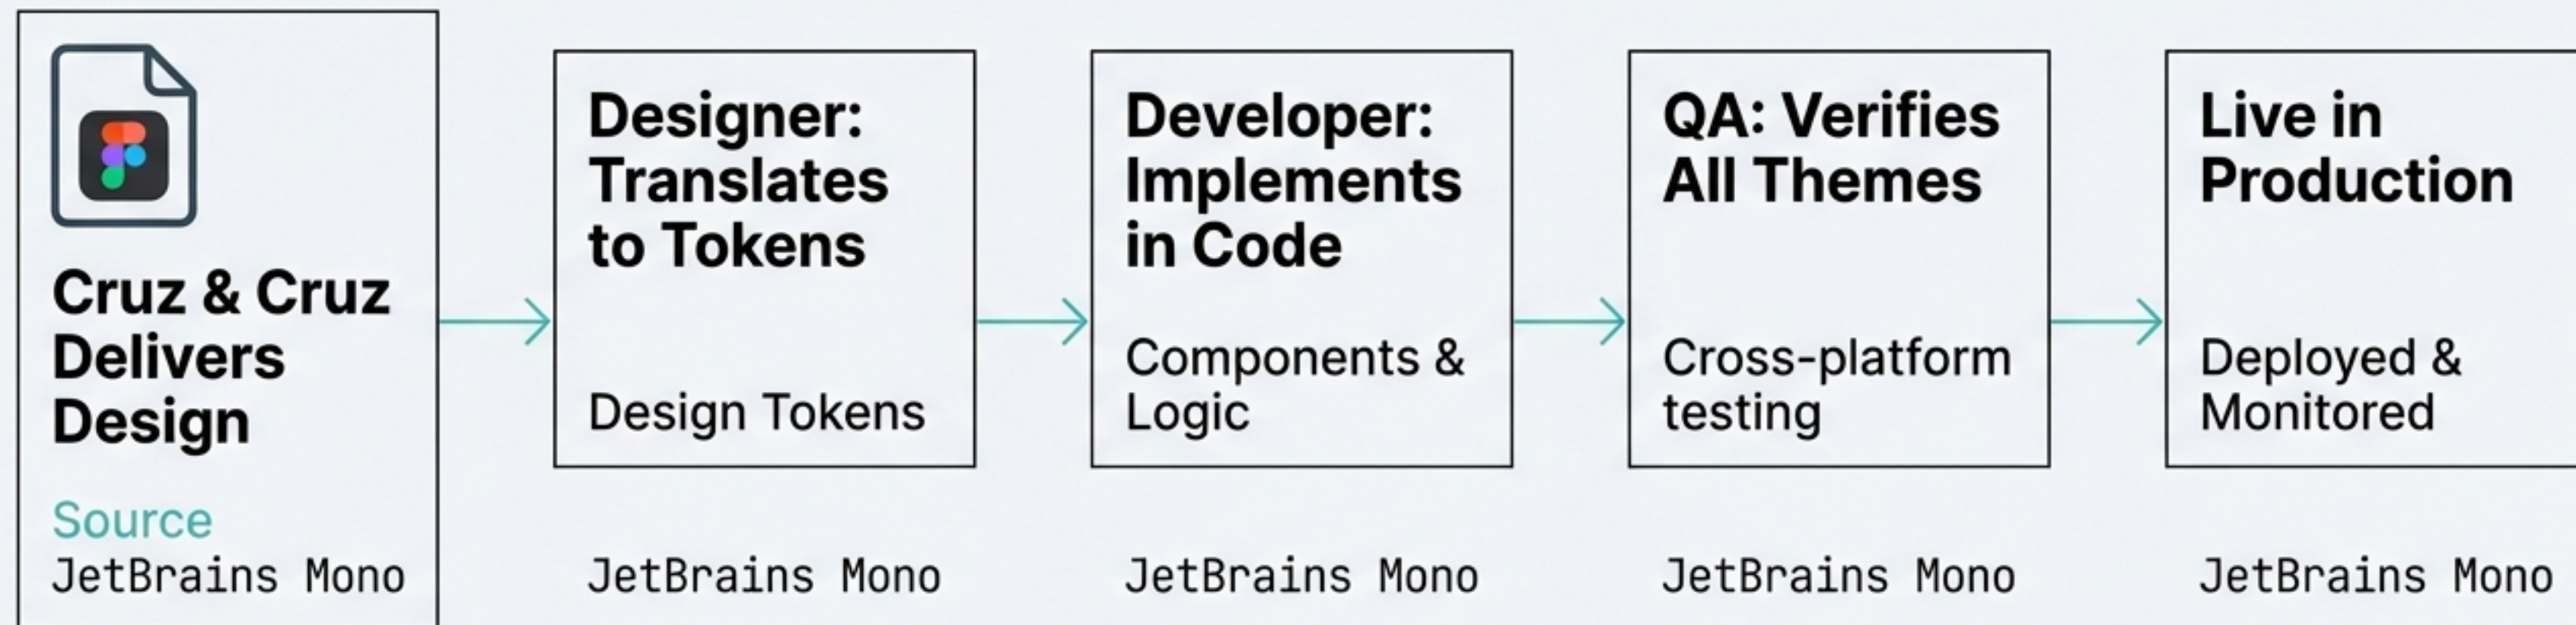

#BBBBBB / #000000

High Contrast

WCAG AAA accessible

User feedback
JetBrains Mono

Your design system becomes code the same week you deliver it.

Help us make privacy beautiful.

Design is what makes the difference between
a security tool and a product people love.

Next: Review brief, send questions,
schedule concept review.
