

# SGraph Send

## Design Partnership Kickoff

---

Prepared for Cruz & Cruz

February 2026

# The Problem We Solve

## How people share files today

- Email attachments (size limits, no encryption)
- WeTransfer / Dropbox (server can read files)
- Slack / Teams (stored in plaintext forever)
- Google Drive (scanned, indexed, ad-targeted)

## What can go wrong

- Data breaches expose files to attackers
- Employees or insiders can access content
- Legal requests compel data handover
- AI tools silently process your documents

**Every file sharing service today can read your files.**

# The Architecture Difference

## WeTransfer

Your file → Their server (plaintext) → Recipient

*The server can read, scan, index, and hand over your files*

## SGraph Send

Your file → Encrypted in browser → Encrypted blob on server → Decrypted in browser

*The server stores only encrypted data — it cannot read your files under any circumstances*

**We're like WeTransfer, except we literally cannot read your files.**

# Why This Matters Now

## **Privacy regulations tightening globally**

GDPR, HIPAA, DORA — compliance is now mandatory

## **Remote work drives cross-boundary sharing**

Sensitive files move between companies, countries, devices daily

## **AI tools process sensitive documents**

Every file uploaded to an AI service is a potential leak

## **Zero-trust is becoming the standard**

The assumption: no server should be trusted with plaintext data

**Privacy-first file sharing isn't a niche — it's the future.**

# The Product: SGraph Send

[send.sgraph.ai](https://send.sgraph.ai)

Working MVP — Live Today

**Encrypted file sharing. Zero knowledge. Zero fuss.**

Browser-side AES-256-GCM encryption

Token-based access control with usage limits

Transparency panel showing exactly what we store

Zero cookies, zero tracking, zero third-party scripts

# How It Works

1

## Drag & Drop

Sender drags file onto the page

2

## Encrypt

Browser encrypts with  
AES-256-GCM

3

## Upload

Encrypted blob sent to  
server

4

## Share

Sender gets link +  
decryption key

5

## Decrypt

Receiver enters key,  
browser decrypts

**The decryption key never touches our servers.**

# The Transparency Panel

## What we store

- ✓ Hashed IP address (SHA-256)
- ✓ Timestamp of transfer
- ✓ File size in bytes
- ✓ Content type hint

## What we never see

- ✗ File name
- ✗ File content
- ✗ Decryption key
- ✗ Raw IP address

**We don't just promise privacy — we prove it.**

# The SGraph Product Family

`send.sgraph.ai`

Encrypted file sharing

Live MVP

`image.sgraph.ai`

Image processing

Planned

`text.sgraph.ai`

Semantic text generation

Planned

`billing.sgraph.ai`

Usage-based billing

Planned

## The “S” in SGraph

Secure

Semantic

Simple

Send

Share

# Technology Stack

Built for design flexibility from the ground up

## Vanilla JS + Web Components

No framework lock-in — fully encapsulated, reusable UI elements

## CSS Custom Properties

Single class change switches themes — five themes from day one

## i18n from Day One

All text externalised into translation files — EN + PT live, more planned

## Web Crypto API

Client-side AES-256-GCM encryption — never leaves the browser

## No Text in Images

All content decoupled from design assets — multilingual-ready

# Who Uses SGraph Send

## Privacy-Conscious Professional

Lawyer, journalist, consultant.  
Sends contracts securely.

## Tech-Savvy Developer

Shares credentials, API keys.  
Wants transparency and open source.

## Everyday User (Friends & Family)

Shares photos and large files.  
Needs dead-simple, zero jargon.

## Enterprise Admin

Manages tokens, monitors usage.  
Needs dashboards and control.

# *Why are we reinventing WeTransfer?*

— First user feedback

---

The file-sharing utility is immediately clear.  
The differentiation isn't landing yet.

**Our biggest design challenge: make encryption feel effortless, not scary.**

# The Big File Sweet Spot

**< 30 MB**

**Small**

Email, Slack handle this fine

Low pain

**30 MB - 1 GB**

**Medium**

WeTransfer, Dropbox work but are annoying

Medium pain

**1 GB +**

**Large**

Limits, failures, no retry, no encryption

High pain

**SGraph Send uses S3 direct upload — no meaningful size limit.  
The bigger the file, the more the product shines.**

# What We Need From You

01

## Logo

Multi-variant: full colour, B&W, icon, lockup, monogram

02

## Brand Identity

Colours, typography, visual language, motion guidelines

03

## Website Mockups

Five key screens across Aurora and Glacier themes

04

## Design System

Components, tokens, states — implementation-ready

05

## Theme Definitions

Five themes as CSS custom property sets

*Full details in the written brief provided separately.*

# The Logo Challenge

## Design Constraints

- Must work from 16×16 favicon to conference screen
- Evoke security without being intimidating
- No padlocks, no shields, no fortress imagery
- Modern, clean, approachable
- Communicate movement or transfer
- Work across the product family
- Optional: reference graph/node concepts

## Variants Needed

Full colour

Black & white

Single colour

High contrast

Icon / mark only

Full lockup

Monogram

# Five Themes, One Design System

## Aurora

Clean, modern default

#4ECDC4

## Glacier

Cool, trust-evoking

#4A90D9

## Ember

Warm, approachable

#E07C4F

## Dark Mode

Low-light environments

#BBBBBB

## High Contrast

WCAG AAA accessible

#000000

**We need a design system, not a single design.**

# Five Key Screens

1

## Landing Page

First impression —  
“What is this?”

2

## Upload Flow

Encryption in action —  
the core experience

3

## Upload Complete

Link + key + transparency —  
trust moment

4

## Download Page

Receiver experience —  
also a brand landing page

5

## Admin Console

Token management +  
stats dashboard

**Each screen tells a different part of the trust story.**

# Competitive Positioning

|                           | SGraph Send | WeTransfer | SendSafely | OnionShare |
|---------------------------|-------------|------------|------------|------------|
| Zero-knowledge encryption | ✓           | ✗          | ✓          | ✓          |
| Transparency panel        | ✓           | ✗          | ✗          | ✗          |
| Self-hostable             | ✓           | ✗          | ✗          | ✓          |
| No ads or tracking        | ✓           | ✗          | ✓          | ✓          |
| Open source               | ✓           | ✗          | ✗          | ✓          |
| Product family            | ✓           | ✗          | ✗          | ✗          |
| Beautiful UX              | Goal        | ✓          | ✗          | ✗          |

**Design is our competitive advantage. Security is table stakes.**

# Working Together

## File Sharing

We'll use SGraph Send itself — you become a real user

## Deliverables

Figma preferred, SVG for logos, JSON/CSS for design tokens

## Review Process

Concepts → Feedback → Refined → Mockups → System → Handoff

## Our Team

### Dinis Cruz

Decisions & approvals

### Designer

Day-to-day coordination

### Architect

Tech constraints

### Advocate

User feedback

### Ambassador

Market positioning

# How the Agentic Team Works

This project is built by a multi-agent team of 17 specialised roles.

Each role produces specific outputs. Your design work feeds directly into implementation.

**Your design system becomes code the same week you deliver it.**

# Timeline & Next Steps

## Phase 1

### Initial Concepts

Logo explorations + visual direction (2-3 options)

## Phase 2

### Selected Direction

Chosen concept developed and refined

## Phase 3

### Full Mockups

Five key screens in Aurora + Glacier themes

## Phase 4

### Design System

Components, tokens, all five theme definitions

## Phase 5

### Handoff

**Next step: Review the written brief, send questions, schedule concept review**

# Why This Matters

We're building privacy infrastructure that makes encryption invisible

Design is what makes the difference between a security tool and a product people love

This is an opportunity to define the visual identity of a new product family

---

**Help us make privacy beautiful.**

# Thank You

Cruz & Cruz
