

SGraph Send — Design Partnership Kickoff

Making zero-knowledge encryption invisible.

Every popular file-sharing service can read your files.

The Standard (Convenient)

Files are stored in plaintext or keys are held by the server.

The Reality (Compromised)

The Trade-off: Users currently choose between 'Easy' (Insecure) and 'Secure' (Difficult).

We are the WeTransfer of Zero Trust.

We cannot read your files. The server sees only noise.

Server holds the key and the file.

Server holds only encrypted blob.
Key never leaves the browser.

Encryption happens in the browser, not the server.

Happy Path

Critical: The decryption key never touches our servers.

We don't just promise privacy; we prove it.

Transparency Panel

Logged Data (Visible to Us)

Timestamp: 2026-02-15 14:00:00

✓

File Size: 1.2 GB

Zero Knowledge (Invisible to Us)

👁️

File Name: [REDACTED]

👁️

Content Type: [UNKNOWN]

👁️

Decryption Key: [NEVER SENT]

Radical Transparency

The UI must communicate trust without overwhelming the user.

The Challenge: Make encryption feel effortless, not scary.

The Professional.

"I need to send contracts without friction."

The Developer.

"I want open-source tools I can verify."

The Everyday User.

"I just want to send big files without ads."

The Admin.

"I need visibility on usage, not content."

Design Problem: The utility is clear, but the differentiation is invisible.
We must answer 'Why not WeTransfer?' in 10 seconds.

Infrastructure for the future of work.

The Ecosystem

The Sweet Spot

The Deliverables.

01. Logo.
Multi-variant, scalable, identifiable.

02. Brand Identity.
Colors, typography, visual language.

03. Website Mockups.
5 Key Screens (High Fidelity).

04. Design System.
Components, tokens, themes.

05. Theme Definitions.
Aurora, Glacier, Ember, Dark Mode.

We aren't looking for a single pretty page. We need a scalable visual language.

The Logo Challenge.

Evoke security without the scare.

The Landscape.

The Requirements.

Scale.

- Must work from a 16px favicon to a billboard.

Avoid Clichés.

- NO Shields.
- NO Padlocks.
- NO Fortresses.

Mood.

- Modern, clean, implying movement and transfer.

SGraph Mark.

A design system, not a single design.

Aurora

Default
Balanced
Professional

Glacier

Trust
Frozen
Secure

Ember

Approachable
Human
Warm

Tech enables instant theme switching via CSS variables. Must also include Dark Mode and High Contrast (WCAG AAA).

Architectural Minimalism

Five screens to tell the trust story.

Landing Page
Inter

First impression.
What is this?

Upload Flow
Inter

Encryption in action.
Visual feedback.

Success State
Inter

Link generation + Key
display.

Download Page
Inter

The Receiver Experience.
Crucial for conversion.

Admin Console
Inter

Management and stats.

Tech built for design flexibility.

Zero Dependencies.

Vanilla JS & Web Components.
No framework bloat.

Native Theming.

CSS Custom Properties allow
instant re-skinning.

Global Ready.

i18n baked in. No text
embedded in images.

Client-Side Security.

Web Crypto API. Encryption
happens before the network.

Your design becomes code the same week you deliver it.

Fast feedback loops. You are feeding a multi-agent workflow.

Timeline & Phases.

Immediate Next Step: Review written brief and schedule concept review.

Help us make privacy beautiful.

Design is the difference between a 'security tool' and a 'product people love.'
We are building the privacy infrastructure of the future. Let's go.
