

SG / send

Document: / Brand Shorthand & Logo Direction

Version: / v0.3.6 / 

Date: / 15 February 2026

Status: / For Internal Discussion & Agency Briefing

Reference: / Based on Designer Comment v0.3.6

The 'Graph' Challenge

The Context

Triggered by CC-F001
(Cruz & Cruz Feedback).

The agency flagged a critical user perception issue with the word "Graph" in the product name.

While accurate to the parent company, it creates friction in a consumer file-sharing context.

The Perception Gap

/ Constraint: We cannot remove 'Graph' entirely as it anchors the legal entity and parent brand lineage.

Introducing SG/Send

The Catalyst for a Unified System

SGraph Send → **SG/Send**

1. Everyday & Brand

SG/Send

Used in conversation, UI
chrome, and marketing.

2. Formal & Legal

SGraph Send

Retained for contracts and
terms of service.

3. Domain & Location

`send.sgraph.ai`

The digital address mirrors
the brand structure.

Solves the Friction, Keeps the DNA

Lineage

Honours the parent brand (SGraph). Technically curious users can decode the acronym, but it doesn't burden the casual user.

CC-F001 ref.

The Bridge

Visual separator that replaces the awkward syllable 'graph'. Connects the entity to the action.

Utility

Foregrounds the user goal. Instant comprehension without semantic friction.

Result: A name that satisfies the legacy constraint while maximizing user clarity.

The **'/'** as a Brand Anchor

1. URL Native

`send.sgraph.ai/` — The product lives at a path. The symbol is web-native.

2. Architecture

Separation of concerns. Echoes the Zero-Knowledge architecture where data is divided from the host.

3. Motion

The 70-degree lean implies forward momentum, progress, and sending.

4. Command Line Interface

Resonates with the developer persona. Feels like a terminal command or switch.

5. Efficiency

Two characters + one symbol.
No wasted syllables.

A Scalable Brand Architecture

Parent Brand → **SG/**

The Anchor. Implies infinite extensibility.

Pure Typography. No Icon Needed.

Design Direction for Cruz & Cruz

The slash is the mark.

Weight & Colour

Angle & Geometry

Typeface & Case

SG/Send
sg/send
SG/SEND

We reject the need for generic 'cloud' or 'arrow' icons. The typography must carry the brand.

Built for Every Scale

/ **SG**/

Monogram /
Avatar

Favicon (16x16px)

The Single Stroke Advantage:
Perfect legibility where complex logos fail.

Beyond the Logo: The UI System

Aligning Spoken and Digital Identity

See (Browser)

send.sgraph.ai

Read (Logo)

SG/Send

Say (Verbal)

SG Send

The Rule:

The slash is silent when spoken, present when written. Similar to “w/” (with).

“I will SG Send that file to you.”

Technical & Semantic Checks

Mitigating Reserved Character Conflicts

Context	Risk	Mitigation Strategy
URLs / Handles	Slash is a separator	Use 'SGSend' or 'SG-Send'. 'SG' is generic, but 'SG/Send' is distinctive.
Filenames (OS)	Forbidden character	Auto-convert to 'SG-Send' (e.g., installer_sg-send.exe).
Hashtags	Breaks tag	Official tag: #SGSend.
SEO	Search parsing	Optimize for both 'SG Send' and 'SG/Send'. 'SG' alone is too broad.

The slash is a visual brand layer, not a strict literal requirement in hostile technical environments.

Why This Wins

Option	Clarity	System Potential	Brand Distinctiveness	
SG/Send (Proposed)	High (Action focus)	High (SG/ prefix)	High (Typographic Mark)	Winner
SGraph Send (Current)	Medium (‘Graph’ friction)	Medium	High	
SG Send (Plain)	High	Low (Generic)	Low	
S/Send	Low (Confusing)	Medium	Medium	

SG/Send creates the optimal balance between legacy (SG) and usability (Send).

Document Context

This strategy was triggered by CC-F001 (Cruz & Cruz uncertainty about “graph”). It builds directly on the v0.3.3 **Agency Brief** (Section 3) and the **Kickoff Presentation** (Slides 8, 14).

“ A design system that turns a naming awkwardness into a branding asset.
